The Building Regulations 2010

Approved Document

Residential Security

Q

Unauthorised Access

2016 edition - for use in Wales*

2016 edition

This approved document supports requirement Q1 of Schedule 1 to the Building Regulations 2010. It takes effect on a date to be confirmed following consultation.

- * This approved document gives guidance for compliance with the Building Regulations for building work carried out in Wales. It does not apply to building work carried out on excepted energy buildings in Wales as defined in the Welsh Ministers (Transfer of Functions) (No.2) Order 2009.

The Approved Documents

What is an Approved Document?

Welsh Ministers have approved a series of documents that give practical guidance about how to meet the requirements of the Building Regulations 2010 for Wales. Approved documents give guidance on each of the technical parts of the regulations and on regulation 7 (see the back of this document).

Approved documents set out what, in ordinary circumstances, may be accepted as reasonable provision for compliance with the relevant requirements of the Building Regulations to which they refer. If you follow the guidance in an approved document, there will be a presumption of compliance with the requirements covered by the guidance. However, compliance is not guaranteed; for example, 'normal' guidance may not apply if the particular case is unusual in some way.

Note that there may be other ways to comply with the requirements – *there is no obligation to adopt any particular solution contained in an approved document*. If you prefer to meet a relevant requirement in some other way than described in an approved document, you should discuss this with the relevant building control body.

In addition to guidance, some approved documents include provisions that must be followed exactly, as required by regulations or where methods of test or calculation have been prescribed by Welsh Ministers.

This approved document relates only to the particular requirements of the Building Regulations that the document addresses. However, building work must also comply with any other applicable requirements of the Building Regulations.

How to use this approved document

This document uses the following conventions.

- a. **Text against a blue background** is an extract from the Building Regulations 2010 or the Building (Approved Inspectors etc.) Regulations 2010 (both as amended). These extracts set out the legal requirements of the regulations.
- b. Key terms, **printed in blue**, are defined in Appendix A.
- c. When this approved document refers to a named document, the relevant version is listed in Appendix B. However, if the issuing body has revised or updated the listed version of the document or standard, you may use the new version as guidance if it continues to address the relevant requirements of the Building Regulations.

NOTE: Standards and technical approvals may also address aspects of performance or matters that are not covered by the Building Regulations, or they may recommend higher standards than required by the Building Regulations.

The Approved Documents

Where you can get further help

If you do not understand the technical guidance or other information in this approved document or the additional detailed technical references to which it directs you, you can seek further help through a number of routes, some of which are listed below.

- a. The Welsh Government website:
<http://gov.wales/topics/planning/buildingregs/?lang=en>
- b. *If you are the person undertaking the building work:* either from your local authority building control service or from an approved inspector
- c. *If you are registered with a competent person scheme:* from the scheme operator
- d. *If your query is highly technical:* from a specialist or an industry technical body for the relevant subject.

DRAFT

The Building Regulations

The following is a high level summary of the Building Regulations relevant to most types of building work. Where there is any doubt you should consult the full text of the regulations, available at www.legislation.gov.uk.

Building work

Regulation 3 of the Building Regulations 2010 defines 'building work'. Building work includes:

- a. the erection or extension of a building
- b. the provision or extension of a controlled service or fitting
- c. the material alteration of a building or a controlled service or fitting.

Regulation 4 states that building work should be carried out in such a way that, when work is complete:

- a. *For new buildings or work on a building that complied with the applicable requirements of the Building Regulations:* the building complies with all the applicable requirements of the Building Regulations.
- b. *For work on an existing building that did not comply with the applicable requirements of the Building Regulations:*
 - (i) the work itself must comply with all the applicable requirements of the Building Regulations
 - (ii) the building must be no more unsatisfactory in relation to the requirements than before the work was carried out.

Material change of use

Regulation 5 defines a 'material change of use' in which a building or part of a building that was previously used for one purpose will be used for another.

Regulation 6 sets out the particular requirements of Schedule 1 that must be met before a building can be used for a new purpose. To meet the requirements, the building may need to be upgraded in some way.

Materials and workmanship

In accordance with regulation 7, building work must be carried out in a workmanlike manner using adequate and proper materials. Guidance on materials and workmanship is given in Approved Document 7.

Energy efficiency requirements

Part 6 of the Building Regulations imposes additional specific requirements for energy efficiency.

If a building is extended or renovated, the energy efficiency of the existing building or part of it may need to be upgraded.

The Building Regulations

Notification of work

Most building work and material changes of use must be notified to a building control body (local authority or approved inspector) unless one of the following applies.

- a. It is work that can be self-certified by a registered competent person scheme installer or certified by a registered third party certifier.
- b. It is work exempted from the need to notify by regulation 12(6A) of, or Schedule 4 to, the Building Regulations 2010.

Responsibility for compliance

People who are responsible for building work (e.g. agent, designer, builder or installer) must ensure that the work complies with all applicable requirements of the Building Regulations. The building owner may also be responsible for ensuring that work complies with the Building Regulations. If building work does not comply with the Building Regulations, the building owner may be served with an enforcement notice.

DRAFT

Residential Security

Summary

0.1 This approved document gives guidance on how to comply with requirement Q1 of the Building Regulations. It contains the following sections:

Section 1: Doors

Section 2: Windows

Section 3: Bespoke Timber Doorsets

Section 4: Lighting

Appendix A: Key terms

Appendix B: Documents referred to

Application

0.2 Requirement Q1 applies only to new dwellings.

DRAFT

The Requirement

This approved document deals with the following requirement from Part Q of Schedule 1 to the Building Regulations 2010.

Part Q Unauthorised access

Requirement

Part Q Security – Unauthorised access Q1.

Reasonable provision must be made to deter and resist unauthorised access to –

- (a) any dwelling; and
- (b) any part of a building from which access can be gained to a flat within the building.

Limits on application

Requirement Q1 applies only in relation to new dwellings.

Performance

The requirement to resist unauthorised access applies to easily accessible doors and windows that provide access in any of the following circumstances:

- into a dwelling from outside
- into parts of a building containing flats from outside
- into a flat from the common parts of the building

In the Welsh Ministers view, doors and windows will meet the requirement if they can resist physical attack by a casual or opportunist burglar by being both:

- sufficiently robust
- fitted with appropriate hardware

The requirement to deter unauthorised access applies to:

- entrance doors into a dwelling
- the entrance doors and communal areas of a building containing dwellings.

In the Welsh Ministers view security lighting will meet the requirement if it can act as a deterrent against crime.

Section 1: Doors

General

- 1.1 All doorsets that provide access into a dwelling or into a building containing a dwelling should be secure doorsets in accordance with the paragraphs below. Doorsets include interconnecting access doors between garages or conservatories into a dwelling and communal entrance doorsets.

If there is no interconnecting doorset allowing access into the dwelling then the garage doorset does not need to be a secure doorset. Where access can be gained via an interconnecting doorset then either the garage doorset or the interconnecting doorset should be a secure doorset.

Application

- 1.2 Secure doorsets should be manufactured to a design that has been demonstrated by means of testing to meet the security requirements of British Standard Publication PAS 24:2012 or designed and manufactured in accordance with Appendix B.

Doorsets satisfying other standards that provide similar or better performance are also acceptable, these include:

- STS 201 Issue 5:2013
- LPS 1175 Issue 7:2010 security rating 2
- STS 202 Issue 3:2011 burglary rating 2
- LPS 2081 Issue 1:2015 security rating B

Further advice is available in Secured by Design's New Homes 2014

- 1.3 Letter plates, where provided, should have a maximum opening of 260mm x 40mm and be located and / or designed to hinder anyone attempting to remove keys with sticks and /or insert their hand, for example, by incorporating a flap or other features to restrict access.
- 1.4 The main doors for a dwelling (in most circumstances the front door) should have a door viewer unless other means exist to see callers, such as clear glass within the door or a window next to the doorset. In this instance the doorset should have a chain or door limiter.
- 1.5 Frames should be mechanically fixed to the structure of the building in accordance with the manufacturer's installations instructions.

Section 1: Doors

Lightweight framed walls should incorporate a resilient layer to reduce the risk of anyone breaking through the wall and accessing the locking system. The resilient layer should be timber sheathing at least 9mm thick, expanded metal or a similar resilient material. The resilient layer should be to the full height of the door and 600mm either side of the doorset.

DRAFT

Section 2: Windows

General

2.1 Ground floor, basement and other easily accessible windows (including easily accessible rooflights) should be secure windows in accordance with the paragraphs below.

Application

2.2 Windows should be made to a design that has been demonstrated, by means of a test, to meet the security requirements of British Standards publication PAS 24:2012.

Windows satisfying other standards that provide similar or better performance are also acceptable, these standards include

- STS 204 Issue 3:2012
- LPS 1175 Issue 7:2010 security rating 2
- LPS 2081 Issue 1:2015 security rating A

Frames should be mechanically fixed to the structure of the building in accordance with the manufacturer's installation instructions.

DRAFT

Section 3: Security Lighting

General

All elevations containing entrance doors into a dwelling or the entrance doors and communal areas of a building containing dwellings should have external security lighting.

Application

External security lighting on an elevation containing an entrance to a dwelling should be a photo electric cell (dusk to dawn including a switched manual override control), utilising a low energy consumption light sources with an efficacy greater than 40 Lumens per circuit.

For communal parts of flats 24 hour lighting (switched using a photoelectric cell) will be required. This will normally include the communal entrance hall, lobbies, landings, corridors and stairwells.

Further advice is available in Secured by Design's New Homes 2014.

DRAFT

Appendix A: Key terms

The following are key terms used in this document:

Doorset

A complete door assembly, assembled on site or delivered as a complete assembly, consisting of the door frame, door leaf or leaves, essential hardware and any integral side panel or fanlight (but excluding couple assemblies).

Window

Windows, rooflights, roof windows or similar.

Secure doorset

Either:

- A doorset that is proven to resist physical attack by a casual or opportunist burglar, or
- a bespoke doorset incorporating construction features that are proven to reduce crime.

Secure window

Either:

- a window that is proven to resist criminal attack or
- a bespoke window incorporating construction features that are proven to reduce crime.

Easily accessible

Either:

- a window or doorway, any part of which is within 2m vertically of an accessible level surface such as the ground or basement level, or an access balcony, or
- a window within 2m vertically of a flat or sloping roof (with a pitch of less than 30°) this is within 3.5m of ground level.

Coupled assembly

A doorset and window that are supplied as separate self-contained frames and fixed together on site.

Proven

In the context of secure doorsets and secure windows, a product designed and constructed in accordance with a specification or design shown by test to be capable of meeting the required performance.

Further information on materials and workmanship is given in Approved Document 7.

Laboratories accredited by the United Kingdom Accreditation Service (UKAS) or an equivalent European national accreditation body should have the necessary expertise to conduct the relevant tests.

Appendix A: Key terms

Any test evidence used to confirm the security of a construction should be carefully checked to ensure that it demonstrated compliance that is adequate and that applies to the intended use. Evidence passed from one organisation to another can become unreliable if important details are lost. Small differences in construction can significantly affect the performance of a doorset or window.

Schemes that certify compliance with PAS 24:2012 or other standards that offer similar or better performance may be acceptable for demonstrating compliance. A list of UKAS accredited certification bodies is given on the UKAS website. Many recognised schemes are also listed on Secured by Design's New Homes 2014 guide, section 2.

DRAFT

Appendix B: Bespoke timber doorsets

General

B.1 A timber doorset constructed in accordance with this section is considered a secure doorset for the purposes of requirement Q1.

The information in this section applies to doors of up to 1000mm and 2000mm high, additional measures may be necessary for larger doorsets.

Material

B.2 The doorset should be manufactured from solid or laminated timber with a minimum density of 600kg/m³.

Dimensions

B.3 Door rails, stiles and muntins should be at least 44mm thick. After rebating, frame components should retain at least 32mm of timber.

B.4 Any panel within the doorset should be at least 15mm thick. The panel should be securely held in place. Beading should be mechanically fixed and glued in position.

B.5 The smaller dimension of each panel – which can be either the width or height of the panel – should be 230mm or less

Locks, hinges and letter plates

B.6 The main doors for entering a dwelling (usually the front doorset) should be fitted with a multipoint locking system that meets the requirements of:

- PAS 3621 (key locking on both sides), or
- PAS 8621 (non-key locking on the internal face), or
- PAS 10621 (non-key locking on the internal face, but with an external locking override facility).

If it is not practical or desirable to install a multipoint locking system, a mortice lock that conforms with one of the following standards can be fitted instead, with a surface-mounted rim lock that conforms to the same standard:

- BS 3621 (key locking on both sides), or
- BS 8621 (non-key locking on the internal face), or
- BS 10621 (non-key locking on the internal face, but with an external locking override facility).

Between the locking points for the mortice lock and surface mounted rim lock, the distance should be 400 – 600mm.

Appendix B: Bespoke timber doorsets

B.7 The non-primary doors for entering a dwelling (for example, back door or garage interconnecting doors) should be fitted with a multipoint locking system that meets the requirements of:

- PAS 3621 (key locking on both sides), or
- PAS 8621 (non-key locking on the internal face), or
- PAS 10621 (non-key locking on the internal face, but with an external locking override facility).

If it is not practical or desirable to install a multipoint locking system, a mortice lock that conforms with one of the following standards can be fitted instead, with a surface-mounted rim lock that conforms to the same standard:

- BS 3621 (key locking on both sides), or
- BS 8621 (non-key locking on the internal face), or
- BS 10621 (non-key locking on the internal face, but with an external locking override facility).

The morticed bolts should have a minimum projection of 20mm, should be at least 100mm from the top and bottom corners of the door, and should avoid any door construction joints.

B.8 Hinges accessible from outside should incorporate hinge bolts.

B.9 Letter plates, where provided should:

- have a maximum opening of 260mm X 40mm, and
- be located and / or designed to hinder anyone attempting to remove keys with sticks and / or insert their hand, for example, by incorporating a flap or other features to restrict access.

Door limitation and caller identification

B.10 The main doors for a dwelling (in most circumstances the front door) should have a door viewer unless other means exist to see callers, such as clear glass within the door or a window next to the doorset. In this instance the doorset should have a chain or door limiter.

In some situations a door chain or limiter is not appropriate, for example where a warden may need emergency access to residents in sheltered housing. Alternative caller identification measures such as electronic audio-visual door entry systems can be used to identify visitors.

Glazing

B.11 Any glazing which, if broken, would permit someone to insert their hand and release the locking device on the inside of the door should be a minimum of class P1A in accordance with BS EN 356:2000. Double or

Appendix B: Bespoke timber doorsets

triple glazed units need to incorporate only one pane of class-P1A glass.

DRAFT
