

WELSH HEALTH CIRCULAR

Cynulliad Cenedlaethol Cymru
The National Assembly for Wales

Parc Cathays
Caerdydd CF10 3NQ

Cathays Park
Cardiff CF10 3NQ

Issue Date: July 2000

Status: Action

Title: FOR THE RECORD – Managing Records in NHS Trusts and Health Authorities

For Action by:

Health Authorities - Chief Executives
NHS Trust - Chief Executives

Action required *See paragraph(s)* : 6, 7, 8, 9,
18, 45

For Information to: See Attached List

Sender: Mr John Morgan, Director, Health Information Management & Technology Division, NHS Directorate, National Assembly for Wales, Cathays Park, Cardiff, CF10 3NQ

National Assembly contact(s) : Nia Watkins, Programme Co-ordinator: Data Quality and Health Records Management, Health Information & Technology Division 2, NHS Directorate, Cathays Park, CF10 3NQ, 029 2082 3640 - email: nia.watkins@wales.gsi.gov.uk

Enclosure(s): Appendix A – C

A Welsh Language version of this circular will follow as soon as it is available

Tel: 029 20825111 GTN: 1208 3640
Llinell union/Direct line: 029 2082 3640
Ffacs/Fax: 029 2082 5146
Minicom: 029 2082 3280

Distribution List

Chief Executives	Health Authorities
Chief Executives	NHS Trusts
Director	NHS Confederation in Wales
Chief Officer	Association of Welsh Community Health Councils
Chief Executive	Welsh Local Government Association
Dean	University of Wales, Bangor
Policy Development Officer	Commission for Racial Equality
Ms Gwen Thomas	Clinical Effectiveness Support Unit, Llandough
Chief Executive	NHS Staff College, Wales
Secretary	British Medical Association (Wales)
Regional Head of Health	UNISON
Board Secretary	Royal College of Nursing
Chief Executive	British Dietetic Association
Executive Secretary	British Orthoptic Society
Regional Officer	Manufacturing, Science, Finance
Regional Secretary	The GMB
Research Assistant	Transport & General Workers Union
Secretary	British Dental Association in Wales
General Secretary	Wales TUC
Secretary	Chartered Society of Physiotherapists
Secretary	Society of Radiographers
Secretary	Society of Chiropodists and Podiatrists
Secretary	Union of Construction Allied Trades and Technicians
Secretary	Royal College of Midwives
Secretary	Electrical & Engineering Staff Association
Secretary	Amalgamated Electrical and Engineering Union
Secretary	Welsh Central Pharmaceutical Committee
Chairman	Welsh Executive, Royal Pharmaceutical Society of Great Britain
Director	Wales Council for Voluntary Action
Chief Pharmacist	Guild of Health Care Pharmacists
Secretary	Institute of Health Care Management
Secretary	British College of Optometrists
Secretary	Association of Optometrists
	Scottish Executive Health Department

Dear Colleague,

Summary

1. The primary function of this Circular is to improve the management of NHS healthcare records in NHS Trusts and Health Authorities. The Circular:-
 - sets out the legal obligations for all NHS bodies to keep proper records;
 - explains the actions needed from Chief Executives and other managers to fulfil these obligations, which include;
 - NHS organisations to draw up a records management strategy.
 - Such strategies should be drawn up and agreed by April 2002.
 - Each NHS organisation should identify a specific senior manager responsible for co-ordinating, publicising and monitoring implementation of the records management strategy and details of the named manager should be sent to the National Assembly for Wales.
 - NHS Trusts and Health Authorities should develop action plans for effective records management services for all staff groups, record types and media.
 - Records management services and controls should be included in NHS Trust and Health Authority IM&T strategies
 - Organisations should be working towards ensuring that these principles and standards within this circular are applied in all areas of record keeping
 - provides guidelines on good practice;
 - explains the requirements to select records for permanent preservation;
 - lists suggested *minimum* periods for retention of NHS records, and indicates where further information may be found.
2. This circular replaces circulars WHC(89)60 'HSM: Preservation, retention, & destruction of records: Responsibilities of DHA's under the public records acts', WHC(94)23 'Retention of maternity records - Revision of WHC (89)60' and WHC(94)59 'Preservation, retention and destruction of health records', which are cancelled.

What Records are Covered in this Circular

3. NHS Records are public records, as defined in the First Schedule of the Public Records Act 1958 (Appendix A, para. 1.4 of this circular includes an illustrative list of types of records covered). This circular does not cover GP health records, guidance for which is set out in WHC(99)7 'Preservation, Retention & Destruction of GP General Medical Services Records Relating to Patients' (replacing FHSL 42/94 or FHS forms, which are covered in EC2/68). The good practice described here, however, is as relevant to the management of GP records as it is to those of Health Authorities and NHS Trusts.

Background

The importance of sound records management practices in the NHS

4. Records management is most effective when it commands commitment from senior managers and is regarded as a professional activity requiring specific expertise.
5. Records are a valuable resource because of the information they contain. That information is only usable if it is correctly recorded in the first place, is regularly up-dated, and is easily accessible when it is needed. Information is essential to the delivery of high quality evidence-based health care on a day-to-day basis and an effective records management service ensures that such information is properly managed and is available:-
 - to support patient care and continuity of care;
 - to support day to day business which underpins delivery of care;
 - to support evidence based clinical practice;
 - to support sound administrative and managerial decision making, as part of the knowledge base for NHS services;
 - to meet legal requirements, including requests from patients under access to health records legislation;
 - to assist clinical and other audits;
 - to facilitate multi-professional working;
 - to support improvements in clinical effectiveness through research and also support archival functions by taking account of the historical importance of material and the needs of future research;

- whenever, and wherever there is a justified need for information, and in whatever media it is required.

Key Objectives

6. NHS Trusts and Health Authorities should draw up a records management strategy, identifying the resources needed to ensure that records of all types (administrative as well as clinical) are:-
 - properly controlled;
 - readily accessible and available for use, and eventually;
 - archived or otherwise disposed of.
7. Such strategies may already be in place, otherwise they should be drawn up and agreed by April 2002 (when this circular is due for review), with implementation well in hand by April 2003, including arrangements to monitor progress and compliance.
8. Each NHS organisation should identify a specific senior manager responsible for co-ordinating, publicising and monitoring implementation of the records management strategy. The name, title and contact details of the named manager should be sent to Nia Watkins, Programme Co-ordinator: Data Quality and Health Records Management, Health Information Management & Technology Division, NHS Directorate, National Assembly for Wales, Cathays Park, Cardiff CF10 3NQ, Tel 029 2082 3640 or email nia.watkins@wales.gsi.gov.uk, by 31st December 2000 so that progress can be monitored and future contact relating to Health Record Management in Wales can be made. Consideration should also be given to including records management in formal audits.
9. The National Assembly for Wales will be working towards ensuring that an all-Wales development of health records management services is in line with the national strategy for information management and that NHS Trusts and Health Authorities develop action plans for effective records management services for all staff groups, record types and media.

Legal Obligations and Good Practice

10. All NHS records are public records under the terms of the Public Records Act 1958 S.3(1)-(2). Chief Executives and senior managers of all NHS organisations are personally accountable for records management within their organisation and have a duty to make arrangements for the safe-keeping of those records under the overall supervision of the Keeper of Public Records. The Department of Health is the liaison point between them and the Public Record Office (PRO) whose responsibility includes permanent preservation.
11. Other legal obligations exist (see below and Appendix A) in respect of particular classes of records, especially those containing personal information. The guidance in this circular and its appendices will help managers to appreciate and carry out their obligations for all types of records within their care.

Issues to be Addressed

12. The 1995 Audit Commission report, '*Setting The Record Straight - A Study of Hospital Health Records*', criticised the poor standard of NHS record keeping and strongly recommended that corrective action should be taken. The key issues to be addressed are the:-
 - legacy of low priority given to records management and related facilities;
 - lack of awareness of the importance of good record keeping;
 - lack of information sharing between professions and work units;
 - tendency to treat records as personal rather than corporate assets;
 - lack of co-ordination between paper and electronic information strategies;
 - need to maintain confidentiality whilst legitimately freeing information.
13. This has given rise to a range of concerns e.g. the question of 'What constitutes an adequate health record?', an issue which will require further exhaustive consultation across the whole health sector.
14. The Caldicott '*Review of Patient Identifiable Information*' also raised concerns about the management of NHS records. The Review, published in December 1997, is the report of a committee set up by the Chief Medical Officer for England to review all patient-identifiable information which passes between NHS

organisations, including to non-NHS bodies, for purposes other than direct care, medical research or in response to statutory requirements. All of the Committee's 16 recommendations were accepted by Ministers and a Caldicott Advisory Sub-Group is now overseeing this implementation in Wales.

15. In the main, the Committee was satisfied that the flows of information containing patient-information were justified but the Committee was concerned at the general lack of awareness of confidentiality and information security requirements throughout the NHS at all levels. The Committee was also concerned at the NHS's ability to limit access to patient information to those who truly need to know. Guidance based on their recommendations is due to be published during 1999. Elements of the guidance are referred to in this circular for the sake of completeness.
16. Additionally, the Caldicott Review recommended that 'Guardians' of patient information should be created to safeguard and govern the uses made of confidential patient information within NHS organisations. WHC (99)92 'Caldicott Guardians In the NHS' calls for each Health Authority, Special Health Authority, NHS Trust and Local Health Groups to appoint a Caldicott Guardian, ideally at Board level, by no later than 14 June 1999. Records managers should liaise closely with their local Guardian to ensure that their records management strategy is in line with national and local guidance and protocols on confidentiality.
17. *'Better Information - Better Health, Information Management and Technology for Health Care and Health Improvement in Wales, a Strategic Framework 1998-2005'* sets describes the wider health agenda as requiring the availability of information about health needs of the population, and the provision of better information for patients and the public about healthy living and service choice. Increasingly, information will be created, stored, and disseminated electronically as work progresses towards the implementation of Electronic Patient Records (EPR) and Electronic Health Records (EHR). The underlying principles for effective records management set out within this Circular apply equally to electronically held records.
18. Records management services and controls should be included in NHS Trust and Health Authority information management and technology strategies, which should themselves be prepared in the context of *'Better Information - Better Health'*. As the strategy evolves, the practical issues of access to records, security and training etc, will require consultation and further guidance.
19. Each of the three major initiatives noted above impacts on the management of records and new practice (and guidance on practice) will evolve in the light of these and other developments.

20. Health and administrative records are core resources for the NHS. They must be properly safeguarded and used efficiently, and all staff - managerial, administrative, professional and medical - must follow the appropriate guidelines and supporting corporate strategies. At the same time, it is important to ensure that resources and procedures for records management are proportionate and appropriate to each organisation.
21. Local Health Groups (LHGs) should operate in accordance with the strategy of their Health Authority in respect of all records which appertain to the business of the LHG.

Confidentiality and Data Protection

22. All NHS bodies and those carrying out functions on behalf of the NHS have a common law duty of confidence to patients and a duty to maintain professional ethical standards of confidentiality. Everyone working for or with the NHS who records, handles, stores, or otherwise comes across patient information has a personal common law duty of confidence to patients and to his or her employer. The duty of confidence continues even after the death of the patient, or after an employee or contractor has left the NHS.
23. In general, any personal information given or received in confidence for one purpose may not be used for a different purpose or passed to anyone else without the consent of the provider of the information. This duty of confidence is long established at common law. However, it is not an absolute duty and can be subject to an overriding public interest. Medical historical and epidemiological research is based on patient information. Usually, the information is anonymised so that individual patients cannot be identified. In such cases, the use of the information is generally accepted as being not incompatible with the duty of confidence. Where identifiable information is used, in the absence of consent (express or implied), it is necessary to consider whether any public interest in the research outweighs the duty of confidence, having regard to all the circumstances. Any research using patient records must first be approved by a Local Research Ethics Committee.
24. There are other statutory restrictions on the disclosure of information:-
 - The NHS (Venereal Diseases) Regulations 1974 and the NHS Trusts (Venereal Diseases) Directions 1991, prevent the disclosure of any identifying information about a patient examined or treated for a sexually transmitted disease (including HIV and AIDS) other than to a medical practitioner (or to a person employed under the direction of a medical practitioner) in connection with and for the purpose of either the treatment of the patient and/or the prevention of the spread of the disease.

- The Human Fertilisation and Embryology Act 1990, as amended by the Human Fertilisation and Embryology (Disclosure of Information) Act 1992, limits the circumstances in which information may be disclosed by centres licensed under the Act.
 - The Abortion Regulations 1991 impose obligations on medical practitioners who carry out terminations of pregnancy to notify the Chief Medical Officer and to provide detailed information about the patient. The Chief Medical Officer may then only disclose that information in accordance with the provisions of the Regulations.
25. The Caldicott Committee recommended that NHS organisations should be held accountable, through clinical governance procedures, for continuously improving confidentiality and security procedures governing access to and storage of personal information.
26. The implementation in March 2000 of the Data Protection Act 1998, which covers both computerised and certain manual personal data, establishes a set of principles with which users of personal information must comply. For instance, the fair and lawful processing of information; the collection and processing of information only for specific purposes; the obligation to ensure that information is accurate, and up-to-date, and retained in a form which identifies the subject only for as long as is necessary for the purpose. The Act imposes statutory restrictions on the use of personal information, including health information. Specific guidance will be issued once the necessary secondary legislation is passed.
27. The disclosure provisions of the Data Protection Act 1998 extend coverage to some records which are not subject to automated processing. Most of the provisions of the Access to Health Records Act have been replaced by broadly equivalent provisions in the new Act.

Available Guidance

28. *‘For The Record - Managing NHS Records’* (Appendix A - attached). These guidelines offer an overview of the key issues and solutions, and best practices for NHS teams to follow when preparing a records management strategy. It represents the joint National Assembly for Wales, Department of Health and Public Record Office view of how records should be administered and sets the standard required of the NHS.

29. *'For The Record - NHS Retention & Disposal Schedule'* (Appendix B - attached) updates the retention schedule previously issued with circular WHC(89)60, and has been approved by the Public Record Office. It sets out minimum retention periods for NHS records of all types, except for GP health records specifically excluded (see **Exclusions**), and indicates which are most likely to be appropriate for permanent retention in archives held on behalf of the nation. It also explains the reasoning behind the determination of minimum retention periods, including legal requirements, where relevant. Further comment on the retention schedule will be welcomed, and updates will be posted to a master schedule on the Department of Health's web site for NHS Records - www.doh.gov.uk/nhsexec/manrec.htm.
30. DGM(96)43, *'The Protection and Use of Patient Information'*, the National Assembly for Wales guidance on confidentiality. This guidance is being revised to take account of the provisions of the Data Protection Act 1998.
31. The Caldicott Committee Report on the *'Review of Patient-Identifiable Information'*, December 1997, and subsequent guidance on improving confidentiality and security, including implementation (*Implementing the recommendations of the Caldicott Report and the appointment of Guardians* included in WHC (99)92, *Caldicott Guardians*).
32. WHC (99)7, *'Preservation, Retention and Destruction of GP General Medical Services Records Relating to Patients'* (Replacement for FHSL 42/95).
33. EC 2/68, *'Disposal of Records which have lost their value'*, which includes coverage of FHS forms, such as GP claims for payment of fees and allowances.
34. *'Better Information - Better Health: An Information Management and Technology for Health Care and Health Improvement in Wales – A Strategic Framework 1998 – 2005'*, sets out plans for the development of Electronic Patient Records and Electronic Health Records, and for their implementation as part of the wider information strategy of the NHS.
35. The Health Archives Group's booklet: *'Hospital Patient Case Records - A Guide To Their Retention and Disposal'*, supplements the Department of Health's guidelines by providing practical advice about the selection processes of records disposal. This publication is a good example of professional archivists working to extend national guidance for use in specific circumstances.
36. WHC (95)24, *'Health Service Use of Ionising Radiations'*, gives specific advice on record keeping for procedures and treatments, such as X-Rays, which use ionising radiations.

37. Information on obtaining copies of the guidance listed above, and further professional advice on a range of topics can be obtained from Appendix C, a list of useful contacts.

Future Developments

38. These guidelines will be updated (or replaced) as necessary to keep pace with future developments arising from changes in the organisation and management of the NHS, the application of the Data Protection Act 1998, the Human Rights Act and the proposed Freedom of Information Act.
39. The proposed Freedom of Information Act is likely to lead to greater openness concerning NHS administrative records, but the disclosure of health records will continue to be restricted along the lines of the current legislative restrictions in particular by the common law of confidentiality and the Data Protection Act 1998.

Structure and Content of Casenotes

40. Principles of good practice for casenotes were set out in 'Setting the Record Straight' 1999, Audit Commission update.
41. These were derived from:-
- Professionals – Doctors, Nurses and other healthcare professionals.
 - Tunbridge Report (1965).
 - The Department of Health HSC (89) 20 / HSC 1999/053.
 - Institute of Health Record Information and Management IHRIM (UK).
42. Organisations should be following these guidelines along with the principles set out in Appendix A to ensure that best practice is achieved across Wales.
43. The principles of good practice for casenotes:-
- The patient should be clearly identified and the casenotes should set out diagnosis, history, treatment, outcomes, results and care plans.
 - Casenotes should be kept neat and tidy with legible entries signed and dated, preferably in black ink.
 - Records should be kept up to date and filed in chronological order with the most recent on top.
 - Casenote folders and the contents should have clear structure, which is agreed with users, and should be organised into sections.

- There should be a policy determining which documents should remain in the casenotes after discharge(culling).
- There should be one set of casenotes for each patient.

Quality of Record Keeping

44. The quality of record keeping can be further assessed using 17 Standards, which were produced from the above principles based upon good practice concerning legibility, patient identification, nursing records, diagnostic tests, structure, confidentiality and housekeeping of notes.

- i) There are no loose sheets of paper in the casenotes
- ii) There is a contents index or filing order
- iii) There are section dividers
- iv) There are multiple spines
- v) The folder is marked confidential
- vi) There is a patient identification or front sheet
- vii) The notes appear to be tidy
- viii) Test results are fixed to a proper mount sheet
- ix) The casenote folder is in a good state of repair
- x) There are no personal details about the patient on the outside cover
- xi) The next stage of the patient's treatment is clear
- xii) There is a discharge summary or letter for the last episode
- xiii) The latest history sheet is legible
- xiv) There is a diagnosis for the last episode
- xv) There is evidence of nursing care for the last episode
- xvi) The latest page of nursing notes is legible
- xvii) The patients name is on papers relating to the last episode

45. Organisations should be working towards ensuring that these principles and standards along with those attached to this circular are applied in all areas of record keeping.

The Way Forward

46. The National Assembly for Wales is aware of the issues facing Health Record Managers throughout Wales and has appointed a Health Records Project Manager for Wales in recognition of that fact to support the development of health records management within Wales. The Health Record Project Manager (HRPM), Nia Watkins, will be carrying out a review throughout organisations in Wales in an effort to improve record keeping standards and processes as set out in this circular.

47. The HRPM will be working with Health Records Managers to encourage improvements in quality standards and sharing of best practice. Other work programmes towards standards for the structure and content of the health record are being undertaken simultaneously, the progress of which will be disseminated across Wales.

Associated Documentation

Appendix A : For the Record – Managing NHS Records: Department of Health Guidelines

Appendix B : For The Record – NHS Retention & Disposal Schedule (incorporating B1, Retention and Disposal Schedule; B2, Principles used in determining policy regarding the retention and storage of essential maternity records and B3, List of approved placed of deposit for public records.

Appendix C : List of useful contacts

Further Information

Further information regarding this circular or the associated documentation can be obtained from Nia Watkins, Programme Co-ordinator: Data Quality and Health Records Management, Tel: 029 2082 3640, Email: nia.watkins@wales.gsi.gov.uk.

Authorities)**

Appendix A

For The Record: Managing NHS Records

Department of Health Guidelines

CONTENTS

Section 1 INTRODUCTION

- 1.1 What to do about earlier circulars and guidance?
- 1.2 What do the new guidelines tell us?
- 1.3 Retaining and disposing of records
- 1.4 What sorts of records does it cover?

Section 2 SHARED RESPONSIBILITY FOR NHS RECORDS

- 2.1 Public Records
- 2.2 Statutory responsibility
- 2.3 Managerial accountability and responsibility
- 2.4 Individual responsibility

Section 3 BEST PRACTICES IN RECORDS MANAGEMENT

Section 4 SETTING THE NHS STANDARD

- 4.1-4.4 What are the general principles to follow?
- 4.5-4.9 What needs to be done to achieve the best standards?

Section 5 CREATING RECORDS

- 5.1 What is a record?
- 5.2 What is record registration?
- 5.3 What should be registered?
- 5.4 What is a suitable registration system?
- 5.5 What are the best practices in registration?

Section 6 USING RECORDS AND RECORD TRACKING SYSTEMS

- 6.1 The value of information
- 6.2 The importance of knowing where information can be found
- 6.3 What information should be included?
- 6.4 Manually operated tracking systems
- 6.5 Electronically operated tracking systems
- 6.6 What are the advantages of an electronic tracking system?
- 6.7 What makes a successful system?

Section 7 STORING PAPER RECORDS EFFICIENTLY

- 7.1 A matter of common sense
- 7.2 Making an informed choice
- 7.3 Let the business need determine it
- 7.4 Contracting-out information storage and retrieval

Section 8 NON-PAPER RECORDS

- 8.1 Microfilm, microfiche and digital scanners
- 8.2 Visual records (photographs, films, videos, etc)
- 8.3 Information Technology

Section 9 SELECTION OF NHS RECORDS FOR PERMANENT PRESERVATION

Section 10 DISPOSING OF UNWANTED RECORDS

- 10.1 How long should records be retained?
- 10.2 Who makes the decision?
- 10.3 What are the options for disposal?
- 10.4 What are the rules on destruction?

Section 11 KEEPING POLICIES UNDER REVIEW

For The Record: Managing NHS Records - Department of Health Guidelines

1. INTRODUCTION

1.1 What to do about earlier circulars and guidance?

The last guidance was issued in 1989 as Welsh Health Circular **WHC (89)60**. It was due to be replaced in 1994 but was instead extended for a further period. That circular is now cancelled and copies should be destroyed. It has been superseded by **WHC (2000) 71** and these new guidelines. Also superseded and cancelled is circular **WHC (94)23**, which recommended extended retention periods for maternity records. The revised and recommended retention periods are now incorporated in Appendix B, which also contains the statement of 'Principles in determining policy on retention and storage of essential maternity records', from the British Paediatric Association, the Royal College of Midwives, the Royal College of Obstetricians and Gynaecologists and the United Kingdom Central Council for Nursing, Midwifery and Health Visiting, which was issued with WHC(94)23.

Guidance on GP medical records is set out in **WHC(99)7** (replacing FHSL 42/94). FHS forms, such as GP claims for payment of fees and allowances, continue to be covered by EC 2/68.

1.2 What do the new guidelines tell us?

The new guidelines go into greater detail than the previous circular did and cover good practice for managing all types of NHS records, their creation, use, and final disposal. They outline the current best practices in records management and are divided into sections for ease of reference.

1.3 Retaining and disposing of records

Appendix B, the NHS Retention and Disposal Schedule, sets out the **minimum** document retention periods based on legal and other requirements. *It is important to stress that these are the minimum requirements and there may be circumstances where records could be kept for longer periods for specific purposes.* The Appendix also covers how to arrange for the permanent preservation of historically important items. N.B. All of these guidelines have the approval of the Public Record Office and should be used in the context of this circular.

1.4 What sorts of records does it cover?

These guidelines apply to NHS records of all types, including:-

- Patient health records (Electronic or paper based; including those concerning all specialities, but excluding GP medical records). This includes private patients seen on NHS premises.
- Accident & Emergency, Birth, and all other Registers.
- Theatre Registers & Minor Operations (and other related) Registers.
- Administrative records (including e.g. personnel, estates, financial and accounting records; notes associated with complaint-handling).
- X-Ray and Imaging reports, output and images (but see also WHC (95)24, 'Health Service Use of Ionising Radiations', which gives specific advice on record keeping for procedures and treatments, such as X-Rays, which use ionising radiations).
- Photographs, slides, and other images.
- Microform (i.e. fiche/film).
- Audio and video tapes, cassettes, CD-ROM etc.

- Computer databases, output, and disks, etc, and all other electronic records.
- Material intended for short-term or transitory use, including notes and 'spare copies' of documents.

The guidance applies to any material which holds information gathered as part of your work in the NHS, and this list is not exhaustive. It is important to remember, that the ownership and copyright in these records as a rule is with the NHS Trust or Health Authority, not with any individual employee or contractor.

2. SHARED RESPONSIBILITY FOR NHS RECORDS

2.1 Public Records

All NHS records are public records under the terms of the Public Records Act 1958 S.3(1)-(2). The Act sets out broad responsibilities for everyone who works with such records, and provides for guidance and supervision by the Keeper of Public Records.

2.2 Statutory responsibility

The Secretary of State for Health, all Health Authorities, NHS Trusts and other NHS bodies have a statutory duty to make arrangements for the safe-keeping and eventual disposal of their records. This is carried out under the overall guidance and supervision of the Keeper of Public Records. The Keeper is answerable to Parliament via the Lord Chancellor.

In practice, the Public Record Office (PRO) advises the Department of Health's Departmental Record Officer (DRO) on how to manage Departmental and all types of NHS records. The DRO is the liaison point with the PRO and issues guidance for you to follow.

2.3 Managerial accountability and responsibility

Chief Executives and senior managers are personally accountable for the quality of records management within their organisations, and all line managers and supervisors must ensure that their staff, whether administrative or medical, are adequately trained and apply the appropriate guidelines. For example, Medical Records Officers who have lead responsibility for hospital patient case records and manage the 'records library' and other storage units where they are kept, must have an up-to-date knowledge of the laws and guidelines concerning confidentiality, data protection and access to patient information in particular. Caldicott Guardians, to be appointed in each NHS organisation by 31 March 1999, are responsible within their organisations for approving and ensuring that national and local guidelines and protocols on the handling and management of confidential personal information are in place.

2.4 Individual responsibility

In practice, **you** are responsible for any records which you create or use. This responsibility is established at, and defined by, the law. Furthermore, as an employee of the NHS, any records which you create are public records.

Everyone working for or with the NHS who records, handles, stores, or otherwise comes across information has a personal common law duty of confidence. The Data Protection Act 1998 now places statutory restrictions on the use of personal information, including health information.

Personal information (e.g. about a patient) processed/kept for any purpose should not be kept for longer than is necessary for that purpose. Patient information may not be passed on to others without the patient's consent except as permitted under Sch 2 and 3 of the Data Protection Act 1998 or where applicable, under the common law where there is an overriding public interest. Further guidance on this often difficult issue can be obtained from the Department of Health's guidance, DGM (96) 43 – 'The Protection and Use of Patient Information', and more will be issued as part of the implementation of the Caldicott Report on Patient-Identifiable Information (see WHC (99)92, 'Implementing the recommendations of the Caldicott Report, and Caldicott Guardians'). WHC (99)92 will be updated to cover any new or altered restrictions arising from implementation of the Data Protection Act 1998.

The Audit Commission regularly monitors performance and has issued reports which strongly criticised record keeping in the NHS. Also, the Health Service Commissioner has a statutory right to obtain relevant records when investigating a complaint. If records are missing or inadequately maintained, the Commissioner will criticise that in his report.

3. BEST PRACTICES IN RECORDS MANAGEMENT

The Public Record Office has recently published a Records Management Standard which states that:

"A systematic and planned approach to the management of records within an organisation, from the moment they are created to their ultimate disposal, ensures that the organisation can control both the quality and the quantity of the information that it generates; it can maintain that information in a manner that effectively serves its needs, those of government and of the citizen; and it can dispose of the information efficiently when it is no longer required".

Public Record Office Records Management Standards, 1998.

The full text of these standards is available in hard-copy from the Public Record Office (Kew, Richmond, Surrey, TW9 4DU. Tel: 0181-876-3444), or electronically via the Public Record Office Website on the Internet at <http://www.pro.gov.uk>.

These revised guidelines draw on advice from the PRO and the best practices followed by a wide range of organisations in the public and private sectors. They also take account of the findings of the Audit Commission's 1995 report: 'Setting The Record Straight (A study of hospital medical records)'; and a recent efficiency scrutiny conducted by the Prime Ministers Efficiency Unit and the PRO. Further advice and information is available on request (see Appendix C for a list of useful contacts).

The guidelines provide:-

- A framework for consistent, coherent and compatible records management.
- A set of values with robust yet flexible (where appropriate) standards.
- Integration with other co-developing initiatives legal, organisational and technological.
- A reference point against which continual improvement and consultation can take place e.g. on what constitutes a definitive patient record.

4. SETTING THE NHS STANDARD

4.1 What are the general principles to follow?

Records are valuable because of the *information* they contain and that information is only usable if it is correctly and legibly recorded in the first place, is then kept up to date, and is easily accessible when needed. The following section, together with the details in Appendix B, 'The NHS Retention and Disposal Schedule', identifies the specific actions, managerial responsibilities, and minimum time periods for the effective management of records from creation, through day-to-day use, selection, storage, maintenance and finally, disposal.

4.2 Good record keeping ensures that:-

- you can work with maximum efficiency without having to waste time hunting for information;
- there is an 'audit trail' which enables any record entry to be traced to a named individual at a given date/time with the secure knowledge that all alterations can be similarly traced;
- those coming after you can see what has been done, or not done, and why;
- any decisions made can be justified or reconsidered at a later date.

4.3 This is vitally important in cases such as:-

- providing patient care;
- clinical liability;
- parliamentary accountability;
- purchasing and contract or service agreement management;
- financial accountability;
- disputes or legal action.

4.4 It is therefore vital that you always:-

- record any important and relevant information, making sure that it is complete;
- ensure that it is legible so that it can easily be read and reproduced when required;
- put it where it can be found when needed;
- keep it up-to-date.
- if necessary, share information rather than copying it in order to reduce risks to confidentiality;
- suitably dispose of records as soon as possible (subject to national and local retention periods).

4.5 What needs to be done to achieve the best standards?

Managers in all work units (e.g. personnel, finance, medical records library, operating theatre, clinics, physiotherapy, occupational and speech therapy, orthodontics, Accident & Emergency, etc) need to ensure that staff are aware of the current rules on such issues as Data Protection and access to patient information. They should also be aware of the vital role that records play in delivering health care but, as the Audit Commission reports have shown, there is considerable room for improvement as many NHS units have failed to look after their records properly. This Circular and its appendices are targeted at helping to achieve these necessary improvements. Each unit should have a comprehensive records management programme which includes cost-effective management of non-current as well as active records, and which takes account of their unit's risk management strategy.

Senior managers must ensure that all staff are involved in this programme, which should encompass:-

- profile raising and publicity;
- appropriate resources including training;
- review of procedures and implementation plan for specific actions arising;
- monitoring individual and organisational compliance.

4.6 Roles and Responsibilities

The DRO can offer practical advice but it is likely that Chief Executives and senior managers will need to:-

4.7 Raise the profile of records management by:-

- nominating a local senior manager to take the lead responsibility;
- appointing a local records manager (accountable to the senior manager);
 - giving them both the appropriate cross-organisational authority to get things done;
 - determining their relationship with internal audit and management teams;
 - ensuring that they have the necessary competency;
- developing an organisational records management strategy;
- including records management in business unit objectives and plans;
- including progress reports in periodic reports to their Board.

4.8 The Records Manager will need to:-

- assess the current standard of record keeping;
- develop professional standards and co-ordinate and liaise with colleagues within the health sector to develop best practice;
- determine the various users' business needs;
- conduct a records audit (to identify what records collections already exist and why);
- categorise records series according to their subject matter, value, and rate of use;
- establish access controls.

4.8.1 Rationalise records collections by:-

- encouraging users to share records and the information they contain (but subject to Data Protection and agreed confidentiality guidelines);
- ensuring effective cross-referencing or merging (e.g. of all records for the same patient).

4.8.2 Then put the proper controls in place by:-

- ensuring local application of these guidelines and the accompanying retention and disposal schedule;
- producing local standards covering all types of records (both administrative and medical), in consultation with appropriate local bodies e.g. Community Health Councils (CHC) and ethics committees;
- promulgating the standards by issuing local guidelines.

4.8.3 Publicise and promote the local guidelines by (for example):-

- implementing a formal training programme to launch and support the guidelines;
- including records management in induction training and staff handbooks;
- staging awareness raising sessions using real examples to demonstrate the benefits;
- running a poster and flier campaign, and articles in house journals;
- speaking at team briefings and other meetings.

4.8.4 And finally, maintain standards by:-

- promoting quality through the professional skills and qualifications of key players;
- encouraging all staff to follow the procedures, guidance and best practice;
- monitoring performance through quality control and internal audits;
- identifying areas where improvements could be made;
- reporting performance standards to the Chief Executive, senior managers, and Board and also to other parties e.g. CHCs and the public at large.

4.9 Implementation should be proportionate and appropriate

This guidance will necessarily be applied differently according to the individual circumstances of each NHS Trust and Health Authority. For example, smaller NHS Trusts may find that the role of Records Manager is best performed as part of the duties of one or a number of existing managers. What is important is that:-

- senior management takes active responsibility for records management;
- the resources devoted to records management are adequate for the work to be done;
- legal obligations are met, and
- policies and procedures are carried out consistently and appropriately.

5. CREATING RECORDS

5.1 What is a record?

In the context of this guidance, a record is anything which contains information (in any media) which has been created or gathered as a result of any aspect of the work of NHS employees - including consultants, agency, or casual staff.

5.2 What is record registration?

Registration is a system which allocates a unique identifier (number or alphabetical prefix) to each item, and which records that sequentially in a 'register' or index. Registration in this sense is additional to that needed to meet legal obligations for registration with third parties, such as the Data Protection Act 1998.

5.3 What should be registered?

In accordance with long-standing national procedures, clinical records - including electronic ones such as the Electronic Patient Record (EPR) - are routinely created and registered for each patient when they first visit a clinician. In addition, Hospital Accident & Emergency Departments, Imaging & Pathology, and other units who receive direct referrals may have a separate registration system. A unique identifier, e.g. the NHS Number, is normally allocated to patients, but their name, address, date of birth, their General Practitioner's name, and other data are used as additional cross-checks.

Not every administrative record needs to be registered. The local records manager will need to determine, together with business managers and other interested parties such as the local Caldicott Guardian, which categories of record are important enough to warrant formal registration and to make this clear in the locally produced instructions. Registration will depend on the organisation's business need to maintain accountable records of particular activities, its information needs, how many records there are on that particular topic or in that series, and on any legal obligations for registration with third parties, such as the Data Protection Act 1998. Some examples of registered file series are personnel and appointments, payroll, finance, estates, Korner returns, and performance monitoring. With the development of Electronic Patient Records (EPR) and Electronic Health Records (EHR), there will be a need to identify every item which is patient related with the relevant NHS Number to provide the necessary links through all electronic records.

5.4 What is a suitable registration system?

You may already have a workable system (e.g. Patient Administration System - PAS; Hospital Information System - HIS; Electronic Patient Record - EPR) in place. In this case, the records manager will need to confirm that it continues to meet all business requirements, which must include its user friendliness and also satisfies any legal obligations for registration with third parties. Systems will need to be adapted to conform with these requirements. The organisation may decide to have more than one system, depending on the complexity of its records management requirements; there are no hard and fast rules. Note, however, that GP's are currently obliged to maintain their clinical records required under paragraph 36 to Schedule 2 of the NHS (GMS) Regulations 1992, on specific forms provided by the Health Authority. They may supplement or duplicate (but not replace) those forms with data/records held on a computer.

Individual documents may be registered, but it is normal practice to create a file (folder, box-file, etc.) to hold all the documents on each subject, and to register the file(s) for each series.

5.5 What are the best practices in registration?

The best practice principles of registration are:-

- the file title must be unique;
- the reference identity assigned to each file must be unique;
- both must be relevant to and easily understood by all users;
- the identifier should be restricted to no more than four elements;
- each element should relate to a different hierarchical level of the file title;
- details should be recorded both on the file cover and in the register.

At a minimum the file description should identify:-

- its title;
- its registration identifier (e.g. number or prefix used in register);
- the date it was registered (opened);
- the date it is due to be closed and reviewed, destroyed, or archived.

6. USING RECORDS AND RECORD TRACKING SYSTEMS

6.1 The value of information

We all spend most of our working lives creating, collecting, and recording information - whether that is via a simple note of a telephone conversation, a large report, or personal data about a specific patient or their treatment - but each of these records is only as valuable as the information it contains, and that is only of value if it can be found when needed, and then used effectively. The NHS Executive encourages improvements in records management across the NHS, and each individual has a key role to play in maximising benefits to patient care through effective record keeping.

6.2 The importance of knowing where information can be found

Accurate recording and knowledge of the whereabouts of all records is essential if the information they contain is to be located quickly and efficiently. One of the main reasons why records get misplaced or lost is because their next destination is not recorded anywhere.

6.3 What information should be included?

Tracking mechanisms should record the following (minimum) information:-

- the item reference number or other identifier;
- a description of the item (e.g. the file title);
- the person, unit or department, or place to whom it is being sent;
- the date of the transfer to them.

6.4 Manually operated tracking systems

Common methods for manually tracking the movements of active records include the use of:

- a paper register - a book, diary, or index card to record transfers;
- file 'on loan' (library-type) cards for each absent file, held in alphabetical or numeric order;
- file 'absence' or 'tracer' cards put in place of absent files.

Manual systems often suffer because they are rarely updated, quickly rendering such systems ineffective.

6.5 Electronically operated tracking systems

Automated methods of tracking include the use of:-

- a computer database in place of paper/card index;
- bar code labels and readers linked to computers;
- workflow software to electronically track documents.

6.6 What are the advantages of an electronic tracking system?

An electronic system can drastically reduce the amount of paper generated, and therefore the volume of paper to be stored. Using an electronic tracking system rather than, for example, a card index can be more efficient - speeding up information retrieval times, reducing mis-filing, and the problems associated with the use of absence markers. Barcoding improves the speed and accuracy of recording file movements by replacing manual keying of data with automatic reading of barcodes. Portable, hand held, barcode readers can be particularly useful for large sites or stores. In all of these examples the biggest benefit lies in the automatic and immediate updating of the file movement database to record the latest information as it happens.

Such systems allow multiple users to access them at the same time via networked computers; and also provide readily accessible management information on file activity levels, quantities, file titles, and 'bring forward' on due date for destruction. None of these can easily be achieved manually.

6.7 What makes a successful system?

A well thought-out tracking system - manual or electronic - will meet all user needs and will be supported by adequate equipment. It will provide an up-to-date and easily accessible movement history and audit trail. The success of any tracking system depends on the people using it and therefore, all staff must be made aware of its importance and given adequate training and updating.

7. STORING PAPER RECORDS EFFICIENTLY

7.1 A matter of common sense

When a record is in constant or regular use, or is likely to be needed quickly, it makes sense to keep it within the business unit responsible for the related work. Storage equipment for current records will usually be adjacent to users i.e. their desk drawers or nearby cabinets, to enable information to be appropriately filed so that it can be retrieved when it is next required. Records must always be kept securely and when a room containing records is left unattended, it should be locked. A sensible balance should be achieved between the needs for security and accessibility.

Where a non-NHS agency or individual is contracted to carry out NHS functions, the contract must draw attention to obligations on confidentiality and to restrictions on the use of personal information, including those specified by the Data Protection Act 1998. The contract must require that patient information is treated and stored according to specified security standards, and is used only for purposes consistent with the terms of the contract. Action that will be taken in the event of confidence being breached (e.g. termination of contract) should be specified.

7.2 Making an informed choice

There is a wide range of suitable office filing equipment available. The following factors should be taken into account:-

- compliance with Health & Safety regulations (must be the top priority);
- security (especially for confidential material);
- the user's needs (must be a major consideration);
- type(s) of record to be stored;
- their size and quantities;
- usage and frequency of retrievals;
- ergonomics, suitability, space efficiency and price.

7.3 Let the business need determine it

As the business need for quick access to particular records reduces, it may be more efficient to move the less frequently used material out of expensive offices and into cheaper accommodation. This usually facilitates the use of more effective and space efficient storage options e.g. mobile racking or specially equipped warehouse-type units with automated retrieval.

7.4 Contracting-out information storage and retrieval

Off-site storage can be especially beneficial for less frequently used material, and private sector companies are capable of providing secure and efficient information storage and retrieval services for all types of record. In 1996/97 the joint scoping study by the Prime Minister's Efficiency Unit and the PRO concluded that such options should be routinely considered for all government records. It is an option which NHS units should also actively consider, especially as part of a Public Private Partnership Initiative.

8. NON-PAPER RECORDS

8.1 Microfilm, microfiche and digital scanners

Microfilm and fiche have been used for many years and Courts will accept them as evidence. Their use may continue and, whilst they can be operated in tandem with computers, there is a gradual move away from film/fiche in favour of computer storage of digital images captured through scanners. Both microfilm readers and computers can be linked to scanners to capture incoming paper mail, and to direct fax-in/out facilities.

Microfilming comes into its own as a relatively cost-efficient way to capture and store images of otherwise bulky or deteriorating archival material:-

- to minimise storage costs of materials which would otherwise face destruction;
- to make copies available for other uses (such as research) whilst safeguarding the original;
- to reduce the storage space occupied by low activity paper records.

It is common practice to make copies for office use, keeping the masters securely stored. Note that the provisions of the Data Protection Act 1998 on registration of records and restriction of disclosure, relate to microfilmed records as well as to other personal records.

There is considerable scope for reducing the costs by getting together with other NHS units to jointly commission the microfilming of records. It is worth noting that converting images into a digitised format (i.e. onto a computer, or CD-ROM etc) is cheaper from microfilm than it is from paper, so transfer onto film might be a good initial move.

Despite its relative cheapness, microfilming still costs money. There is little point in going through the time-consuming conversion process only to allow the microfilm to deteriorate. There are industry standards for both creation and storage and these should be implemented.

8.2 Visual records (Advice contributed by the Health Archives Group)

Many hospitals, and some other health bodies, have large collections of visual images - either as artistic images and still photographs (which may be prints, negatives, slides, transparencies, and electronic-readable images) or as moving images (film or video).

The teaching and historical value of medical photographs should be considered, especially where innovative procedures or unusual conditions are involved. Some of this material may be considered for permanent preservation and the advice of a local archivist should be sought.

In the case of photographs, the quality of image available from negatives or original prints should be considered and new prints may be made in cases where the original is deteriorating. In the case of moving images, advice may be sought from the Keeper of Documentary Films, National Film Archives (see Appendix C).

Photograph and film collections assembled by medical and other staff through their work within NHS organisations, should be regarded as Public Records and subject to these guidelines. Note that the provisions of the Data Protection Act 1998 on registration of records and restriction of disclosure, relate to photographs of identifiable individuals as well as to other personal records. Further information is provided in 'Making and Using Visual and Audio Recordings of Patients', General Medical Council, September 1997.

8.3 Information Technology

Increasingly, information technology is being introduced into the workplace. In some areas up to 85% of all documents are now produced electronically and this trend places new demands on managing records. For instance, if an electronic document is to be produced as evidence in court cases it will only be accepted if assurances can be given that the computer was not being misused and was operating properly at the time the record was produced. NHS Trusts and Health Authorities should take their own legal advice to ensure that their systems fully comply with current requirements, and in any case where they may have doubts. (See HSC 1998/153, *'Using Electronic Records in Hospitals: Legal requirements and Good Practice'*, which has not been released in Wales)

There is also an increase in the use of electronic transfer using intranets and NHS networks. Managers will need to address the implications for storage, security and training, etc. in the light of local implementation of such systems.

The principles of good records management practice described in these guidelines apply equally to records created electronically; the concern is the content or information and not the medium of delivery.

In some hospitals, X-Rays (including ultrasound, scanning, and other diagnostic imaging techniques) are captured and managed digitally. This is usually managed via a Picture Archiving Communications System (PACS), the functions of which include digital storage of images and reporting functions.

The EPR was piloted at Burton and Wirral hospitals. Others, including Bethlem & Maudsley, Horizon, and Winchester & Eastleigh NHS Trusts have since pioneered the concept of advanced EPR and Integrated Clinical Workstations (ICWS). There are plans to add on multi-media and voice activated facilities.

Further information about these and other developments is included in *'Better Information – Better Health : Information Management & Technology for Health Care and Health Improvement in Wales'* and good practice guidelines are available in HSC1998/153 *'Using Electronic Patient Records in Hospitals: Legal Requirements and Good Practice'*, which has not been released in Wales.

Further advice is available from the NHS Executive Information Management Group or (from April 1999) the NHS Information Authority (NHSIA) - see the attached list of useful contacts in Appendix C.

9. SELECTION OF NHS RECORDS FOR PERMANENT PRESERVATION

All NHS records are public records under the terms of the Public Record Act 1958. Public records over 30 years old and selected for permanent preservation must be transferred to the PRO or kept in a place of deposit, appointed under S.4(1) of the 1958 Act. Guidance on selection is given in the introduction to '*For The Record: NHS Retention and Disposal Schedule*' (Appendix B to this circular).

In general, records worthy of preservation from NHS Trusts and Health Authorities are appropriate for deposit in the nearest Local Authority Record Office which has been approved by the PRO. In a very few instances individual hospitals have made suitable arrangements and have themselves been appointed as places of deposit.

It should be kept in mind that the PRO expects the standards of storage and access to records in places of deposit to match those found in the PRO itself. The relevant standards are spelt out in the PRO's own guidance '*Beyond the PRO: Public Records in Places of Deposit*'. Free copies of this document, and information about the nearest or most appropriate place of deposit for the records of particular NHS institutions, can be obtained from the Head of Archive Inspection, The Public Record Office, Kew, Richmond, Surrey, TW9 4DU (Tel: 0181-392-5262). A list of approved places of deposit, with telephone and fax numbers, is included in Appendix B.

As the resource implications of being appointed as a Place of Deposit are likely to be significant, it is strongly recommended that anyone considering making an application should first contact the PRO Head of Archive Inspection at an early stage. It is highly unlikely that an application will succeed without a firm commitment to employ a professionally qualified archivist.

10. DISPOSING OF UNWANTED RECORDS (see also Section 9 on preservation)

10.1 How long should records be retained?

The length of the retention period depends upon the type of record and its importance to the business of the NHS Trust or Health Authority. The destruction of records is an irreversible act, whilst the cost of keeping them can be high and continuing. The Department's guidance '*For The Record : NHS Retention & Disposal Schedule*' in Appendix B takes account of legal requirements and sets out the **minimum** retention periods for both clinical and administrative records. You have local discretion to keep material for longer, subject to local needs, affordability and, where records contain personal information, the requirements of the Data Protection Act 1998. The schedule may not be a complete list of everything you may come across and you may need to seek advice or consult outside. You will find a list of helpful contacts in Appendix C of this guidance, but you should first consult your local records manager.

10.2 Who makes the decision?

There are two principal options - to destroy or to dispose for example, by passing on to another organisation. As can be seen from Appendix B, some records have fixed retention periods (for example, invoices can safely be destroyed six years after receipt), whilst others will need more careful consideration. In many cases the staff on the section which ordinarily uses them will be able to decide. Operational managers are responsible for making sure that all records are periodically and routinely reviewed to decide what can be disposed of in the light of local and national guidance. A multi-disciplinary Health Record Committee and/or Health Records User Group, reporting as necessary to senior management, should be established to advise on local policy, particularly for the retention, archiving, or disposal of sensitive personal health records. Input from local practitioners should be a key element of a records management strategy.

10.3 What are the options for disposal?

Most NHS records are destroyed as soon as practicable after the expiry of the relevant minimum retention period, but there are other options for disposal. The destruction of records is an irreversible act, so it is vital to consider all the options and get the decision right. Disposal does not just mean destruction. It can also mean the transfer of records from (say) paper onto microfilm or computer; or from one user to another. It could involve depositing it with an organisation which wishes to carry on using it e.g. a hospital or Local Authority Record Office, the PRO or another bona fide research body, for example a university or established research institute recognised by the Local Research Ethics Committee. Advice about these options (and the implications of the Public Record Act) is available from the PRO and others - see the attached list of useful contacts at Appendix C - and in the introduction to Appendix B.

10.4 What are the rules on destruction?

Most NHS records, even administrative ones, contain sensitive or confidential information. **It is therefore vital that confidentiality is safeguarded at every stage** and that the method used to destroy such records is fully effective and secures their complete illegibility. Normally, this will involve shredding, pulping, or incineration. This can be done on site, or via an approved contractor, but it is the responsibility of the NHS Trust or Health Authority to satisfy itself that the methods used throughout the process provide adequate safeguards against accidental loss, or disclosure of their contents. It is recommended that a brief description be kept of everything that has been destroyed, when, and by whom and where a contractor is used, they should be required to sign confidentiality undertakings and to produce written certification as proof of destruction.

11. KEEPING POLICIES UNDER REVIEW

Circumstances and priorities change and it is important that all policies and procedures are regularly reviewed to ensure that they continue to reflect best practice, and the legal and business needs of the organisation. A number of developments, e.g. Caldicott, Data Protection, and extension of information technology into EPR and EHR, have already been identified as drivers for the evolution of records management practice. As the practical implications are identified, this guidance will be updated to reflect the latest position.

**Appendix B to Health Service Circular WHC (2000) 71
(For The Record: Managing records in NHS Trusts & Health Authorities)**

Appendix B

For The Record: NHS Retention & Disposal Schedule

Contents:

- B1 - Retention and Disposal Schedule**
- B2 - Principles to be used in determining policy regarding the retention and storage of essential maternity records**
- B3 - List of approved places of deposit for public records**

B1 - NHS Retention and Disposal Schedule

Introduction

The destruction of records is an irreversible act, while the cost of preserving records worthy of permanent preservation is high and continuing. The criteria which follow are intended to give guidance on how long records should be kept for business purposes and on the identification of records of permanent value.

In each NHS Trust and Health Authority, records managers must ensure that records no longer required for business use are reviewed as soon as practicable under the criteria set out below so that ill-considered destruction is avoided. This schedule identifies **minimum** retention periods. The review will determine whether records are to be selected for permanent preservation, destroyed or retained by the NHS Trust or Health Authority for research or litigation purposes.

Whenever the schedule is used, the guidelines listed below should be followed:-

- i. Local business requirements/instructions must be considered before activating retention periods in this schedule.
- ii. Decisions should also be considered in the light of the need to preserve records, whose use cannot be anticipated fully at the present time, but which may be of value to future generations.
- iii. Recommended minimum retention periods should be calculated from the end of the calendar or accounting year following the last entry on the document.
- iv. Where the period of retention column is marked with an asterisk (*), the documents described must be considered for permanent preservation and the advice of the chief archivist of an appropriate place of deposit¹ obtained.
- v. The selection of files for permanent preservation is partly informed by precedent (the establishment of a continuity of selection) and partly by the historical context of the subject (the informed identification of a selection). General rules should be drawn up locally, using the profile of material which has already been selected, and the history of the institution or organisation (including pioneering treatments and examples of excellence) within the context of its service to the local and wider communities.
- vi. The provisions of the Data Protection Act 1998 must also be complied with.

¹ Places of deposit for public records

A list of these approved places of deposit, with telephone and fax numbers which were fully up-to-date in the autumn of 1998, is attached as Appendix B3. In cases where there is any doubt about the most appropriate place of deposit, advice should be sought from Archive Inspection Services, Public Record Office, Kew TW9 4DU (tel: 0181 392 5262; fax: 0181 392 5284).

- vii. The Department is considering a proposal to establish a national selection policy. This policy could identify regions in which records of a specialism would have precedence in selection for permanent preservation because of a history of regional excellence or innovation in a particular discipline.

The schedule does not seek to cater for all eventualities: the responsible records managers need to consider whether exceptional circumstances (e.g. events of local or national significance reflected in the records) require the long-term preservation of the records.

It is intended that the Retention Schedule will be regularly updated to reflect and incorporate new and additional records series. In support of this we welcome comments on any aspect of this retention schedule.

Records selected for permanent preservation should be transferred to the relevant place of deposit for public records appointed by the Keeper of Public Records, exercising powers under S.4(1) of the 1958 Public Records Act which have been delegated to her by the Lord Chancellor. In most cases the appropriate place of deposit is the nearest Local Authority Record Office, although in a very few cases a hospital has been appointed as a place of deposit for its own records.

Note on authorities for suggested retention periods:-

Many of the retention periods set out below are carried forward unchanged from the previous circular on this topic WHC(89)60 and its predecessors. The periods recommended thus reflect long-standing good practice, and established thinking about the usefulness of the records for business and periods during which the records support necessary accountability. In the case of some records, especially ledgers, some contracts and certain financial records, statutory authorities apply; where this is known to be the case, the relevant legislation or regulation is mentioned in the Notes column of the table.

Comments and suggestions on the retention schedule should be addressed to:-

The Departmental Record Officer
Department of Health
Premier Buildings
Brunswick Street
Nelson
Lancashire BB9 0HU
Tel: 0113 25 45000/ 47311

Record Type/Sub Type	Retention Period (Years)	Notes
Abortion - Certificate A (Form HSA1) and Certificate B (Emergency Abortion)	3	Abortion Regulations 1991, Statutory Instrument No. 499
Accident Forms		See Litigation dossiers
Accident Register (RIDDOR)	3	Reporting of injuries, diseases and dangerous occurrences regulations, reg. 7; Social Security (Claims and Payments) Regulations, reg. 25
Accident & Emergency Registers		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
Accounts - Annual (Final - one set only)	Permanent	
Accounts – Cost	3	
Accounts - Working Papers	3	
Accounts - Minor records (pass books; paying-in slips; cheque counterfoils; cancelled/discharged cheques (other than cheques bearing printed receipts - See Receipts); accounts of petty cash expenditure; travelling and subsistence accounts; minor vouchers; duplicate receipt books; income records; laundry lists and receipts.)	2	From completion of the audit
Admission books		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
Advance Letters	6	
Advice Notes	1.5	
Agendas		See Meeting Papers
Agreements		See Contracts
Approval Files (Contracts)	*	
Approved Suppliers Lists	11	Consumer Protection Act 1987
Audit Records - original documents	2	From completion of the audit
Audit Reports (including Management Letters, VFM reports and system/final accounts memorandum)	2	After formal clearance by Statutory Auditor

Record Type/Sub Type	Retention Period (Years)	Notes
Bank Statements	2	From completion of the audits
Benefactions	*	
Bills, receipts and cleared cheques	6	
Birth registers (i.e. register of births kept by the hospital)		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
Budgets	2	From completion of the audit
Buildings and engineering works, inclusive of major projects abandoned or deferred - key records, (e.g. Final accounts, surveys, site plans, bills of quantities)	Permanent	
Buildings and engineering works, inclusive of major projects abandoned or deferred - town and country planning matters and all formal contract documents (e.g. Executed agreements, conditions of contract, specifications, "as built" record drawings and documents on the appointment and conditions of engagement of private buildings and engineering consultants.	*	The general principle to be followed in regard to these records is that they should be preserved for the life of the buildings and installations to which they refer.
Buildings - papers relating to occupation (but not Health & Safety information)	3	After occupation ceases. Construction Design Management Regulations 1994
Capital Charges Data	2	From completion of the audit
Capital Paid Invoices		See Invoices
Cash Books	6	The Limitation Act, 1980
Cash Sheets	6	The Limitation Act, 1980
Complaints		See Litigation dossiers

Record Type/Sub Type	Retention Period (Years)	Notes
Computerised records		The recommended minimum retention periods apply to both paper and computerised records, though extra care needs to be taken to prevent corruption or deterioration of the data. Re-recording/migration of data will also need to be considered as equipment and software become obsolete. For guidance, See the Public Record Office guidance, <u>Management and Appraisal of Electronic Records</u> (1998).
Contracts - non sealed (property) on termination	6	The Limitation Act, 1980
Contracts - non sealed (other) on termination	6	The Limitation Act, 1980
Contracts - sealed	*	Contracts under seal and associated records should be kept for a minimum of 15 years
Cost accounts		See Accounts
Creditor Payments	3	
CVs for non-executive directors (successful)	5	Following term of office
CVs for non-executive directors (unsuccessful applicants)	2	Following term of office
Day Files	0.5	
Death registers (i.e. register of deaths kept by the hospital)		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
Debtors' records - cleared	2	From completion of the audit
Debtors' records - uncleared	6	
Deeds of Title	Permanent	
Delivery Notes	1.5	
Demand Notes	6	
Diaries - office - on completion	1	
Discharge books (i.e. register of those discharged by the hospital)		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
Drawings		See Plans and Buildings

Record Type/Sub Type	Retention Period (Years)	Notes
Engineering works		See Plans and Buildings
Equipment		See Products - Liability
Establishment records - major (e.g. Personal files, letters of appointment, contracts references & related correspondence)	6	Keep for 6 years after subject of file leaves service, or until subject's 70th birthday, whichever is the later. Only the summary needs to be kept to age 70; remainder of file can be destroyed 6 years after subject leaves service.
Establishment records - minor (e.g. attendance books, annual leave records, duty rosters, clock cards, timesheets)	2	
Estimates: including supporting calculations and statistics	3	
Expense Claims	2	From completion of the audit
Financial records		See under individual headings. However, once the period of retention for audit purposes is complete (2 years from completion of the audit), documents not required for permanent preservation may be destroyed provided a properly compiled microfilm record is retained for the remainder of the prescribed period, embodying a suitable certificate by the treasurer as to its accuracy and completeness. This does not apply to forms SD55 (ADP) and SD 55J
Forms – Surgical Appliances - AP1, 2, 3, and 4	2	From completion of the audit
Forms – Superannuation - SD55 (ADP) and SD55J (copies)	10	Originals are sent to NHS Pensions Agency
Funding Data	6	
FWH - Personal Record of Hours Actually Worked	0.5	
Health records - personal/patients		See Hospital patient case records
History of Authority or Predecessors, its organisation and procedures	*	
History of Hospitals	*	

<p>Hospital patient case records (individual)</p> <p>N.B. This retention schedule does not cover GP medical records. Guidance on their retention can be found in HSC 1998/217 and ECL 2/68, both of which remain current at the time of issue of this circular.</p> <p>Any reference to " conclusion of treatment" in the following recommended minimum retention periods, should be taken to include all follow-up checks and action in connection with the treatment.</p>	<p>The retention periods which are listed below reflect minimum requirements of clinical need. Personal health records may be required as evidence in legal actions; the minimum retention periods take account of this requirement. It is not necessary to keep every piece of paper received in connection with patients. NHS Trusts and Health Authorities should determine, in consultation with their health professionals, which elements should be considered as a permanent part of the record, and which should be transient and discarded as their value ceases.</p> <p>Before any destruction takes place, ensure that</p> <p>(a) there is consultation with the relevant health professional body or records committee and actions clearly minuted;</p> <p>(b) any other local clinical need is considered; and</p> <p>(c) the value of the records for long-term research purposes has been assessed, in consultation with an appropriate place of deposit.</p>
<p>- pre-1948 records</p>	<p>Should by now have been transferred for permanent preservation or destroyed. Any pre-1948 records which still exist should be considered for permanent preservation, undergoing an appraisal procedure as described in the box above.</p>
<p>- Children and young people</p>	<p>Until the patient's 25th birthday, or 26th if young person was 17 at conclusion of treatment; or 8 years after patient's death if death occurred before 18th birthday.</p>
<p>- Donor records</p>	<p>11 years post transplantation. Committee on Microbiological Safety of Blood and Tissues for Transplantation(MSBT); guidance issued in 1996.</p>
<p>- Maternity (all obstetric and midwifery records including those of episodes of maternity care that end in stillbirth or where the child later dies)</p>	<p>25 years - see Appendix B2 for additional guidance on retention and storage of maternity records previously issued with WHC(94)23</p>
<p>- Mentally disordered persons (within the meaning of the Mental Health Act 1983)</p>	<p>20 years after no further treatment considered necessary; or 8 years after the patient's death if patient died while still receiving treatment.</p>

- Oncology	8 years after conclusion of treatment, especially when surgery only involved. Consideration may wish to be given to BFCO(96)3 issued by the Royal College of Radiologists which recommends permanent retention on a computer database when patients have been given chemotherapy and radiotherapy.
- Patients involved in clinical trials	15 years after conclusion of treatment. EEC Note for Guidance: Good Clinical Practice for Trials on Medicinal Products in the European Community, section 3.17 (see – Pharmacology & Toxicology 1990, 67, 361-372.)
- General (not covered above)	8 years after conclusion of treatment.

Notes on preservation of patient records for historical purposes

1. In the light of the latest trends in medical and historical research, it may be appropriate to select some of these records for permanent preservation. Selection should be performed in consultation with health professionals, and archivists from an appropriate place of deposit. If records are to be sampled, specialist advice should be sought from the same health professionals and archivists. If a NHS Trust or Health Authority has taken on a leading role in the development of specialised treatments, then the patient records relating to these treatments may be especially worthy of permanent preservation.
2. If a whole run of patient records is not considered worthy of permanent preservation but nevertheless contains some material of research value, then the option of presenting these records to local record offices and other institutions under S.3(6) of the Public Records Act 1958 should be considered. Advice on the presentation procedure may be obtained from the PRO's Archive Inspection Services.
3. If a whole run of patient records is considered worthy of permanent preservation but there is a lack of space in the relevant place of deposit to store these records, it may be appropriate to make a microfilm copy and then destroy the paper originals. Microfilms should be produced in accordance with the British and International Standard BS ISO 6199: 1991, copies of which can be purchased from the British Standards Institute.

Notes on the destruction of confidential patient records

1. Destruction of confidential records must ensure that their confidentiality is fully maintained. Normally destruction should be by incineration or shredding. Where this service is provided by a contractor it is the responsibility of the NHS Trust or Health Authority to satisfy itself that the methods used throughout all stages including transport to the destruction site provide satisfactory safeguards against accidental loss or disclosure.

Record Type/Sub Type	Retention Period (Years)	Notes
Hospital Services	10	
Indexes	Lifetime	Registry lists may describe public records marked for permanent preservation, or contain the record of management of public records. They should in these cases be retained permanently. File-lists and document lists, where public records or their management are not covered, should be retained until they have no further administrative use.
Income and expenditure journals	6	
Industrial Relations (not routine staff matters)	*	
Inspection Reports - e.g. Boilers, lifts etc.	Lifetime	Normally retain for the lifetime of an installation. However, it is necessary to assess whether obligations incurred during the lifetime may not be invoked until afterwards, in which case a judgement must be made. If there is any measurable risk of a liability in respect of installations beyond their operational lives, records of this kind should be retained indefinitely.
Inventories (not in current use) of items having a life of less than 5 years	1.5	
Invoices	6	The Limitation Act, 1980

Ward registers		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.
X-ray films (including other image formats for all imaging modalities)		Local decisions should be made with regard to the preservation of these records, which are considered to be of transitory nature
X-ray registers		Local decisions should be made with regard to the permanent preservation of these records, in consultation with relevant health professionals and places of deposit.

Record Type/Sub Type	Retention Period (Years)	Notes
X-ray reports (including reports for all imaging modalities)		To be considered as a permanent part of the patient record - See Hospital patient case records

B2 - Principles to be used in determining policy regarding the retention and storage of essential maternity records.

**British Paediatric Association
Royal College of Midwives
Royal College of Obstetricians and Gynaecologists
and the
United Kingdom Central Council for Nursing, Midwifery and Health
Visiting**

Joint Position on the Retention of Maternity Records

Principles to be used in determining policy regarding the retention and storage of essential maternity records.

1. All essential maternity records should be retained. 'Essential' maternity records mean those records relating to the care of a mother and baby during pregnancy, labour and the puerperium.
2. Records that should be retained are those which will, or may, be necessary for further professional use. 'Professional use' means necessary to the care to be given to the woman during her reproductive life, and/or her baby, or necessary for any investigation that may ensue under the Congenital Disabilities (Civil Liabilities) Act 1976, or any other litigation related to the care of the woman and/or her baby.
3. Local level decision making with administrators on behalf of the health authority must include proper professional representation when agreeing policy about essential maternity records. 'Proper professional' in this context should mean a senior medical practitioner(s) concerned in the direct clinical provision of maternity and neonatal services and a senior practising midwife.
4. Local policy should clearly specify particular records to be retained AND include detail regarding transfer of records, and needs for the final collation of the records for storage. For example, the necessity for inclusion of community midwifery records.
5. Policy should also determine details of the mechanisms for return and collation for storage, of those records which are held by mothers themselves, during pregnancy and the puerperium.

List of maternity records to be retained

6. Maternity Records retained should include the following:-
 - 6.1 documents recording booking data and pre-pregnancy records where appropriate;
 - 6.2 documentation recording subsequent antenatal visits and examinations;
 - 6.3 antenatal in-patient records;

- 6.4 clinical test results including ultrasonic scans, alpha-feto protein and chorionic villus sampling;
- 6.5 blood test reports;
- 6.6 all intrapartum records to include, initial assessment, partograph and associated records including cardiotocographs;
- 6.7 drug prescription and administration records;
- 6.8 post-natal records including documents relating to the care of mother and baby, in both hospital and community settings.
