I am writing to object to the inclusion of the River Severn Valley landscape corridor between Llanidloess and Newtown in an area designated for wind and solar development. This contravenes advice and make one question the rigour and care that has been taken with the process of identifying suitable areas for windfarm development.

The integrity of the Rivers Severn landscape corridor is of intrinsic importance to the region. Greater attention needs to be given to the adverse impact of wind farms on the amenity value and unique beauty and character of upland areas in mid Wales which define the culture and character of this region and are so important to the wellbeing o the local communities as well as to tourism and the local economy.

Peter
