Subject: Proposed Plan to build wind Wind Turbines on Anglesey.
Date: 11 November 2019 22:48:25

I write to express not only anger but more importantly FEAR at the proposal that Anglesey should be a Priority area for Turbines.

Turbines totally alter a landscape, the footprint they create....eg roads for building and maintenance access, concrete block foundations on which they stand all have a massive impact on the geographic habitat.

Anglesey may appear to be a small rural unimportant island, but it is considerably larger than the Isle of Wight and more akin in size to the Isle of Man.

It is a stunningly attractive landscape.

It is one of very few areas, which is accessible to many people, yet still relatively un-developed.

It is an island which attracts visitors who appreciate the natural beauty, and come to walk, to paint, to absorb, to recharge, etc.

Once turbinised so much will be lost for ever.

We owe it to our children, grandchildren and their's onward to make sure they will be grateful to us for the heritage we leave them.

The U.K. is a heavily populated country. We must preserve as much as possible the remaining areas of natural habitat.

As an island we need to put more emphasis on harvesting power from the sea, or building turbines offshore.

There the environmental impact is reduced because access is by water rather than constructed roadways. Maybe it's the cost that reduces the incentive in building at sea,but the long-term cost will in reality be much lower.

PLEASE, PLEASE, PLEASE reconsider from a realistic and practical and LONG-TERM perspective.

PLEASE MAKE A DECISION YOUR DESCENDANTS WILL BE GRATEFUL FOR.

Thank you for listening.....please think really carefully.

Anne West-Watson,

[REDACTED]

PS this is not a NIMBY plea, this is a from the heart plea from one who can already see how much natural landscape, Britain is losing.....and once gone, is gone.
