Introduction

During this period of high infections, Office for National Statistics (ONS) are publishing early headline results from the Coronavirus (COVID-19) infection survey on Wednesdays. This release accompanies a limited dataset which includes estimates of positivity by country and variant analysis by country. This is a summary of those headline estimates for Wales. This does not replace the full COVID-19 infection survey release that is published every Friday at 12pm. **[A statement explaining the need for the additional headline estimates has been produced by ONS.](#)**

Today, **[ONS have published estimates of the numbers of people testing positive for COVID-19 in the week ending 22 January 2022.](#)**

Main points

- In Wales, the percentage of people testing positive for COVID-19 continued to decrease in the week ending 22 January 2022; it is estimated that 99,500 people in Wales had COVID-19 (95% credible interval: 83,300 to 117,100),

equating to around 1 in 30 people.

- COVID-19 infections compatible with the Omicron continue to be the most common variant in Wales.

The numbers of people testing positive for COVID-19 have continued to decline in the latest week in Wales, England and Scotland, whilst the trend was uncertain in Northern Ireland.

UK comparison

- In England, the percentage of people testing positive for coronavirus (COVID-19) continued to decrease in the week ending 22 January; it is estimated that 2,629,400 people in England had COVID-19 (95% credible interval: 2,542,500 to 2,716,500), equating to around 1 in 20 people.
- In Northern Ireland, the trend is uncertain in the week ending 22 January; it is estimated that 96,500 people in Northern Ireland had COVID-19 (95% credible interval: 81,600 to 112,700), equating to around 1 in 20 people.
- In Scotland, the percentage of people testing positive for COVID-19 continued to decrease in the week ending 22 January; it is estimated that 163,600 people in Scotland had COVID-19 (95% credible interval: 143,600 to 184,500), equating to around 1 in 30 people.

Chart 1: Estimates of the percentage of the population in the UK countries testing positive for the coronavirus (COVID-19) on nose and throat swabs since 12 December 2021

Source: Coronavirus (COVID-19) Infection Survey, ONS
The lines represent the modelled trend based on the latest data. Estimates for the last few days of the series, shown as dashed lines in the chart, have more uncertainty.

Quality and methodology information

All results are provisional and subject to revision.

These statistics refer to infections occurring in private households, and exclude infections reported in hospitals, care homes and/or other communal establishments.

Omicron variant-compatible positives are defined as those that are positive on

the ORF1ab-gene and N-gene, but not the S-gene. Delta variant-compatible positives will mostly have a gene pattern ORF1ab + N + S (or occasionally S + ORF1ab and S + N), and so in this analysis are defined as those that are positive on the ORF1ab, N-gene and S-gene, as well as gene patterns N+S and ORF1ab+S.

Data should be treated with caution. Not all cases positive on the S-gene will be the Delta variant, but some cases with pattern ORF1ab+N will also be the Delta variant where the S-gene was not detected for other reasons, such as low viral load.

Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural wellbeing of Wales. The Act puts in place seven wellbeing goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators (“national indicators”) that must be applied for the purpose of measuring progress towards the achievement of the wellbeing goals, and (b) lay a copy of the national indicators before Senedd Cymru. Under section 10(8) of the Well-being of Future Generations Act, where the Welsh Ministers revise the national indicators, they must as soon as reasonably practicable (a) publish the indicators as revised and (b) lay a copy of them before the Senedd. These national indicators were laid before the Senedd in 2021. The indicators laid on 14 December 2021 replace the set laid on 16 March 2016.

Information on the indicators, along with narratives for each of the well-being goals and associated technical information is available in the [Wellbeing of Wales report](#).

Further information on the [Well-being of Future Generations \(Wales\) Act 2015](#).

The statistics included in this release could also provide supporting narrative to
