## Introduction

Data for each topic area is also available in more detail on our [StatsWales](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/emergency-department/emergencyattendances-by-age-sex-site) (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/emergency-department/emergencyattendances-by-age-sex-site>) website.

In light of the impact COVID-19 has had on NHS activity and performance levels, the Welsh Government has published its [programme for transforming and modernising planned care and reducing waiting lists in Wales](https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists) (<https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists>). This plan sets out a number of key ambitions to reduce waiting times for people in Wales. We have incorporated these measurements of performance against these ambitions into this statistical release and on StatsWales.

## Main points

In September, almost 69,000 calls were answered by the 111 service in Wales, an average of 2,294 calls per day. There were also almost 355,000 hits on the [NHS 111 Wales website](https://111.wales.nhs.uk/) (<https://111.wales.nhs.uk/>) and 13,350 completed [symptom checks \(NHS 111 Wales\)](https://111.wales.nhs.uk/SelfAssessments/default.aspx?locale=en&term=A) (<https://111.wales.nhs.uk/SelfAssessments/default.aspx?locale=en&term=A>).

In September there were 3,553 red (life threatening) calls to the ambulance service, 10.2% of all calls. This was an increase in red calls compared with August, and on average more than 100 immediately life-threatening calls made each day.

50.0% of red calls received an emergency response within 8 minutes, 0.7

percentage points lower than the previous month and the joint lowest on record. Data for red calls is only comparable from May 2019 onwards.

There was an average of 2,876 daily attendances to emergency departments, a similar level of activity compared with the previous month. Performance improved against the four hour and twelve hour targets but remains low in historical context. The average (median) time spent in emergency departments shortened in September but remains high at two hours and forty-nine minutes.

The pandemic has caused a large increase in patient pathways waiting to start treatment, and in August lists continued to increase, to over 750,000. The number of patient pathways is not the same as the number of individual patients, because some people have multiple open pathways. More information is available in the Welsh Government's [Chief Statistician's blog](https://digitalanddata.blog.gov.wales/2022/03/22/chief-statisticians-update-explaining-nhs-activity-and-performance-statistics/) (<https://digitalanddata.blog.gov.wales/2022/03/22/chief-statisticians-update-explaining-nhs-activity-and-performance-statistics/>).

New management information suggests that in August 2022, when there were over 750,000 open patient pathways, there were around 589,000 individual patients on treatment waiting lists in Wales. This was an increase of almost 3,500 patients from the previous month.

August saw just over 93,000 patient pathways closed, lower than the pre-pandemic average but significantly higher than in the early part of the pandemic.

The proportion of patient pathways waiting less than 26 weeks decreased slightly in August to 54.8%, from 55.2% in July. This has been relatively stable for some time after falling significantly from the levels pre-pandemic. The number of pathways waiting longer than 36 weeks increased in August and reached the highest level on record for the ninth consecutive month at over 271,000.

Over 59,000 pathways were waiting more than two years, though this fell for the

fifth consecutive month following a consistent increase over the previous year. The average (median) time patient pathways had been waiting for treatment at the end of August increased slightly on the previous month to 22.1 weeks.

In August, the number of pathways waiting longer than one year for their first outpatient appointment increased to over 102,000, the highest number on record.

For diagnostic services, the number of patient pathways waiting decreased to just over 107,000 in August. The number of patient pathways waiting longer than 8 weeks (the target maximum wait) increased to just over 44,400, in August.

For therapies, the number of patient pathways waiting decreased to just over 67,500 in August, but still the second highest level on record. The number waiting longer than fourteen weeks (the target maximum wait) decreased to just over 12,350.

For cancer services, slightly more people started their first definitive treatment in August (1,691) and more pathways were closed following the patient being informed they did not have cancer (13,534) than in the previous month. Performance decreased slightly against the 62 day target in August to 52.5% compared to 53.5% the previous month, and is the lowest since current data collections began.

## **Unscheduled care**

New data relating to unscheduled care are provided for the month of September 2022.

## Calls to 111 service

As of 16 March 2022, the non-emergency 111 helpline service has been rolled out across the whole of Wales.

In September, almost 69,000 calls were answered by the 111 service in Wales, an average of around 2,300 calls per day. Almost a further estimated 10,351 calls were ended by the caller before being answered. Of these, around 2,900 were ended within 60 seconds of the automated messages, suggesting their needs were likely to have been met. Almost 7,500 calls were abandoned after 60 seconds and these are regarded as callers who were more likely to have still required the service after the messages, but were unable to get through or decided not to wait.

Of the calls answered, just under 1,000 calls indicated that they wished to conduct the call in Welsh.

There were almost 355,000 hits on the [NHS 111 Wales website](https://111.wales.nhs.uk/) (<https://111.wales.nhs.uk/>) and almost 13,500 completed [symptom checks \(NHS 111 Wales\)](https://111.wales.nhs.uk/SelfAssessments/default.aspx?locale=en&term=A) (<https://111.wales.nhs.uk/SelfAssessments/default.aspx?locale=en&term=A>) in September.

More data is published on [StatsWales](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Primary-and-Community-Activity/111-service) (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Primary-and-Community-Activity/111-service>).

## Emergency calls to the ambulance service

A wider range of ambulance quality indicators are published on the [Emergency Ambulance Services Committee \(EASC\) website](https://easc.nhs.wales/asi/) (<https://easc.nhs.wales/asi/>) and on [StatsWales](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services) (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services>).

## Activity

**Chart 1: Average daily number of emergency ambulance calls, by call type and month, September 2017 to September 2022**

Source: Welsh Ambulance Services NHS Trust (WAST)

**Emergency ambulance calls and responses to red calls, by local health board and month on StatsWales** ([https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services/emergencyambulancecallsandresponsestoredcalls-by-lhb-month?\\_ga=2.71653658.805453853.1647849266-1086771297.1619441781](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services/emergencyambulancecallsandresponsestoredcalls-by-lhb-month?_ga=2.71653658.805453853.1647849266-1086771297.1619441781))

Note: An update to call handling in May 2019 resulted in a change to red incident volume. It is not possible to directly compare before and after this date. Further details are available in the [quality information](#) (#section-103422).

In September, almost 35,000 emergency calls were made to the ambulance service. This was an average of 1,161 calls per day, a decrease of 15 (1.2%) calls on average per day than the previous month and 257 (18.1%) fewer calls on average per day than the same month last year.

Calls to the ambulance service are categorised as red (immediately life-threatening), amber (serious but not life-threatening) or green (non-urgent). An average of 118 red calls were made per day in September. This was the sixteenth month in a row where on average there were more than 100 immediately life-threatening calls made each day since the change to call handling procedures in May 2019 which impacted on the comparability of the time series.

In September, the proportion of all calls that were immediately life-threatening was 10.2%, an increase of 6.4% on the previous month (9.6%).

## **Performance**

### **Target**

- 65% of red calls (immediately life-threatening; someone is in imminent danger of death, such as a cardiac arrest) to have a response within 8 minutes.

**Chart 2: Percentage of red calls which received an emergency response at the scene within 8 minutes of patient location and chief complaint being established, September 2017 to September 2022**

Source: Welsh Ambulance Services NHS Trust (WAST)

**Emergency responses: minute-by-minute performance for red calls by local health board and month on StatsWales** ([https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services/emergencyresponsesminutebyminuteperformanceredcalls-by-localhealthboard-month?\\_ga=2.177336620.805453853.1647849266-1086771297.1619441781](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Performance/Ambulance-Services/emergencyresponsesminutebyminuteperformanceredcalls-by-localhealthboard-month?_ga=2.177336620.805453853.1647849266-1086771297.1619441781))

Note: An update to call handling in May 2019 resulted in a change to red incident volume. It is not possible to directly compare before and after this date. Further details are available in the [quality information](#) (#section-103422).

In September, 50.0% of emergency responses to immediately life threatening

(red) calls arrived within 8 minutes, the joint lowest on record. This was 0.7 percentage points lower than the previous month, and 2.2 percentage points lower than in September 2021.

The median response time in the four years prior to the pandemic ranged between 4 minutes 30 seconds and 6 minutes for red calls. In September, the average (median) response time to immediately life-threatening 'red' calls was 8 minutes. This was 6 seconds slower than the previous month.

The majority of calls to the ambulance service are categorised as 'amber' calls, for which there is no performance target for call response times. In September, the median response time for amber calls was just over 1 hour and 35 minutes. This was over 14 minutes slower than in August, but over 13 minutes quicker than in September 2021.

## **Emergency department attendances and admissions to hospital**

A wider range of emergency department performance statistics are published on the **National Collaborative Commissioning Unit (NCCU) website** (<https://nccu.nhs.wales/urgent-and-emergency-care/experimental-kpis/>), as management information.

## Activity

**Chart 3: Average number of attendances in NHS Wales accident and emergency departments, and admissions to hospital resulting from attendances at major emergency departments per day, September 2017 to September 2022**

Source: Emergency department data set (EDDS), Digital Health and Care Wales (DHCW)

**Number of attendances in NHS Wales emergency departments by age band, sex and site on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/emergency-department/emergencyattendances-by-age-sex-site>)

Note: Chart shows number of attendances at both major emergency departments and minor injuries units, and the number of admissions resulting

from attending major emergency departments only.

In September there were over 86,000 attendances to all NHS Wales emergency departments. This was an average of 2,876 emergency department attendances per day; 48 fewer attendances per day on average than in the previous month.

In September, over 13,000 patients were admitted to the same or a different hospital following attendance at a major emergency department. This was 2.2% lower than the previous month and 12.5% lower than the same month in 2021.

## **Performance**

### **Targets**

- 95% of new patients should spend less than 4 hours in emergency departments from arrival until admission, transfer or discharge.
- No patient waiting more than 12 hours in emergency departments from arrival until admission, transfer or discharge.

### Chart 4: Percentage of patients admitted, transferred or discharged within 4 hours at NHS emergency departments, September 2017 to September 2022

Source: Emergency department data set (EDDS), Digital Health and Care Wales (DHCW)

#### Performance against 4 hour target by hospital on StatsWales

([https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Emergency-department/performanceagainst4hourwaitingtimetarget-by-hospital?\\_ga=2.139563450.805453853.1647849266-1086771297.1619441781](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Emergency-department/performanceagainst4hourwaitingtimetarget-by-hospital?_ga=2.139563450.805453853.1647849266-1086771297.1619441781))

In September, 67.8% of patients in all NHS emergency departments spent less than 4 hours in the department from arrival until admission, transfer or discharge. This was 0.7 percentage points higher than the previous month .

In 2019, the median time patients spent in emergency departments was around 2 hours and 30 minutes. During the early part of the pandemic, as attendances

decreased the median time spent in the department decreased, to a low of 1 hour 47 minutes in April 2020. Since then, median times have increased and reached a record high of 3 hours and 8 minutes in March 2022. In the latest data for September, the median waiting time was 2 hours and 49 minutes, high in historical context but two minutes faster than the previous month.

The median time spent in emergency department varies by age. Prior to the pandemic, children (aged 0 to 4) spent between 1 hour and 30 minutes and 2 hours in emergency departments, while older patients (aged 85 or greater) spent between 3 hours and 30 minutes and 5 hours.

In September, children (aged 0 to 4) spent an average of 2 hours and 10 minutes. Adults aged 85 and over spent an average of 6 hours and 59 minutes in emergency departments.

**Chart 5: Number of patients waiting more than 12 hours to be admitted, transferred or discharged at NHS emergency departments September 2017 to September 2022**

Source: Emergency department data set (EDDS), Digital Health and Care Wales (DHCW)

**Performance against the 12 hour target by hospital on StatsWales**

(<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Emergency-department/performanceagainst12hourwaitingtimestarget-by-hospital>)

In September there were 10,230 patients waiting 12 hours or more. This was 466 (4.4%) fewer than in the previous month.

## Scheduled care activity

New data relating to unscheduled care are provided for the month of August 2022.

### Outpatient referrals and appointments

#### Activity

**Chart 6: Average daily number of referrals for first outpatient appointment, August 2017 to August 2022**

Source: Outpatient Referral Dataset, Digital Health and Care Wales (DHCW)

**Outpatient referrals on StatsWales** ([https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Activity/Referrals?\\_ga=2.72325530.805453853.1647849266-1086771297.1619441781](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Activity/Referrals?_ga=2.72325530.805453853.1647849266-1086771297.1619441781))

An average of 3,752 referrals for first outpatient appointments were made per day in August. This is a slight increase of 0.3% (13 more referrals per day on average) compared to July.

## Performance

### Targets

- No one waiting for longer than a year for their first outpatient appointment by the end of 2022 (new target established in the **planned care recovery plan** (<https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists>)).

**Chart 7: Number of pathways waiting more than a year for their first appointment, August 2017 to August 2022**

Source: Referral to treatment times (RTT), Digital Health and Care Wales (DHCW)

**Referral to treatment on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Referral-to-Treatment>)

In August, the number of pathways waiting longer than one year for their first outpatient appointment increased to over 102,000, the highest number on record. Pathways waiting longer than one year for a first outpatient appointment increased dramatically over the course of the pandemic.

## Diagnostic and therapy waiting times

### Activity

**Chart 8: Total number of patient pathways waiting for diagnostic and therapy services, August 2017 to August 2022**

Source: Diagnostic and Therapy Services (DATS), Digital Health and Care Wales (DHCW)

### [Diagnostic and Therapy Services Waiting Times by week on StatsWales](https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Diagnostic-and-Therapy-Services/waitingtimes-by-weekswait-hospital)

(<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Diagnostic-and-Therapy-Services/waitingtimes-by-weekswait-hospital>)

Note: The low point in April 2020 for therapies is in part due to Betsi Cadwaladr not submitting data for this month, please see the [quality information](#) (#section-103422).

In August there were over 107,000 patient pathways waiting for diagnostics, a decrease of 2.8% compared with the previous month. There were just over 67,500 patient pathways waiting for therapies, a decrease of 0.8% compared to the previous month. This was the second highest level on record.

## Performance

### Targets

- The maximum wait for access to specified diagnostic tests is 8 weeks.
- The maximum wait for access to specified therapy services is 14 weeks.
- The **planned care recovery plan** (<https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists>) established a target date of Spring 2024 to reach these targets.

## Chart 9: Number of patient pathways waiting over the target time for diagnostic and therapy services, August 2017 to August 2022

Source: Diagnostic and Therapy Services (DATS), Digital Health and Care Wales (DHCW)

### Diagnostic and Therapy Services Waiting Times by week on StatsWales

(<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Diagnostic-and-Therapy-Services/waitingtimes-by-weekswait-hospital>)

Note: Betsi Cadwaladr did not submit data for April 2020, so are not included in the Wales figures for this month.

At the end of August, over 44,000 patient pathways were waiting longer than the target time for diagnostics. This was an increase of 2.5% compared to the previous month.

At the end of August there were just over 12,350 patient pathways waiting longer

than the target time for therapies. This was a decrease of 1.2% compared to the previous month.

Median waiting times had been relatively stable for diagnostic tests since 2017 (2.8 weeks on average) and for therapy services since 2018 (3.6 weeks on average). Median waiting times for both services peaked in 2020 (14.3 weeks for diagnostics and 14.9 weeks for therapies).

In August, the median waiting time for diagnostic tests was 6.0 weeks, compared to 5.6 in the previous month. The median waiting time for therapy services was also 6.0 weeks, compared to 5.7 in the previous month.

## **Referral to treatment time**

Referral to treatment time statistics show monthly data on waiting times for both open and closed pathways following a referral by a GP or other medical practitioner to hospital for treatment in the NHS. Open pathways are those that remain on the waiting list for treatment, whereas closed pathways are those taken off the waiting list.

Activity is measured by patient pathways, which differs to the number of patients. More information on this difference is available in the [Welsh Government's Chief Statisticians blog](https://digitalanddata.blog.gov.wales/2022/03/22/chief-statisticians-update-explaining-nhs-activity-and-performance-statistics/) (https://digitalanddata.blog.gov.wales/2022/03/22/chief-statisticians-update-explaining-nhs-activity-and-performance-statistics/).

Also published is newly collected management information for the number of individual patients on treatment waiting lists in Wales.

## Performance

### Targets

- No patients waiting longer than two years in most specialities by March 2023, and no patients waiting longer than one year in most specialities by Spring 2025 (new targets established in the [planned care recovery plan](https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists) (<https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists>)).
- 95% of patients waiting less than 26 weeks from referral.
- No patients waiting more than 36 weeks for treatment from referral.

**Chart 10: Number of patient pathways waiting to start treatment, August 2017 to August 2022**

Source: Referral to treatment times (RTT), Digital Health and Care Wales (DHCW)

**Patient pathways waiting to start treatment by month, grouped weeks and stage of pathway on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Referral-to-Treatment/patientpathwayswaitingtostarttreatment-by-month-groupedweeks>)

In August there were more than 750,000 patient pathways waiting to start treatment, the highest since comparable data was first collected in 2011. This was 0.9% higher than in the previous month and 61.9% higher than February 2020.

Over 183,000 pathways were waiting more than one year in August. This is the highest figure on record, though it has been relatively stable since Spring 2021. Over 59,000 pathways were waiting more than two years, though this fell for the fifth consecutive month after a consistent increase over the previous year.

The number of patient pathways is not the same as the number of individual patients, because some people have multiple open pathways.

We do not have official statistics on the number of individual patients waiting to start treatment. However, newly collected management information suggests that in August, when the National Statistics (above) reported there were over 750,000 open patient pathways, there were estimated to be 589,000 individual patients on treatment waiting lists in Wales. This was an increase of almost 3,500 patients from the previous month.

Unlike the National Statistics elsewhere in this release, which have been independently assessed against the Code of Practice for statistics, this estimate is based on newly collected management information. Whilst the principles of the Code of Practice have been applied, quality assurance is not to the level of the National Statistics. Work is ongoing to further understand the strengths and limitations of this data and this will be communicated as we learn more. For these reasons there is greater uncertainty around this estimate than with the other figures in this release. However, the level of public interest in

understanding the number of patients in addition to the number of patient pathways adds sufficient value to warrant making this available now.

### Chart 11: Percentage of patient pathways waiting less than 26 weeks, by month and weeks waited, August 2017 to August 2022

Source: Referral to treatment times (RTT), Digital Health and Care Wales (DHCW)

**Percentage of patient pathways waiting to start treatment within target time by month and grouped weeks on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Referral-to-Treatment/percentage-patientpathwayswaiting-month-grouped-weeks>)

Of the 750,000 patient pathways waiting to start treatment, by the end of August, 54.8% had been waiting less than 26 weeks. This was 0.4 percentage points lower than in the previous month and 29.5 percentage points lower than February 2020.

**Chart 12: Number of patient pathways waiting more than 36 weeks, by month and weeks waited, August 2017 to August 2022**

Source: Referral to treatment times (RTT), Digital Health and Care Wales (DHCW)

**Percentage of patient pathways waiting to start treatment within target time by month and grouped weeks on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Referral-to-Treatment/percentage-patientpathwayswaiting-month-grouped-weeks>)

In August over 271,000 patient pathways had been waiting more than 36 weeks. This represented 36.1% of all patient pathways waiting to start treatment. This was 2,553 (or 1.0%) more than in the previous month and the ninth consecutive month reporting the highest figure on record.

The median time waiting to start treatment had generally been around 10 weeks pre pandemic between late 2013 and February 2020. This increased during the pandemic and peaked at a record high of 29 weeks in October 2020. In August,

the median waiting time was 22.1 weeks, which was an increase from 21.3 weeks in the previous month.

**Chart 13: Number of closed patient pathways, August 2017 to August 2022**

Source: Referral to treatment times (RTT), Digital Health and Care Wales (DHCW)

**Closed patient pathways by month, local health board and weeks waiting on StatsWales** (<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Referral-to-Treatment/treatedpatients-by-month-localhealthboard-weekswaiting>)

Note: Data revised to now include Cwm Taf Morgannwg health board closed pathways. Up to the July 2022 statistical release, the data series was not available for Cwm Tag Morgannwg. More details are available in the [quality information](#) (#section-103422).

The number of patient pathways closed in August was just over 93,000. This

was an average of 4,061 patient pathways closed per working day, a decrease of 2.4% from the previous month but 21.3% higher than the same month last year.

## **Cancer services (experimental statistics)**

**Experimental statistics (ONS)** (<https://www.ons.gov.uk/methodology/methodologytopicsandstatisticalconcepts/guidetoexperimentalstatistics>) are official statistics that are in the testing phase and not yet fully developed.

A number of **wider measures from the suspected cancer pathway** (<https://gov.wales/suspected-cancer-pathway-waiting-times-interactive-dashboard>) are produced by Digital Health and Care Wales and published alongside this statistical release.

## Activity

### Chart 14: Closed suspected cancer pathways in the month, by month and outcome, August 2019 to August 2022

Source: Suspected Cancer Pathway, Digital Health and Care Wales (DHCW) and National Data Resource (NDR)

#### Suspected cancer pathway (closed pathways) on StatsWales

(<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Cancer-Waiting-Times/Monthly/>)

In August, 1,691 pathways where the patient was newly diagnosed with cancer started their first definitive treatment in the month. This was an increase of 6.1%

compared to the previous month.

13,534 pathways were closed following the patient being informed they did not have cancer. This is an increase of 12.3% compared to the previous month and the highest level on record.

In August, 16,390 patient pathways were opened in the month following a new suspicion of cancer. This was an increase of 854 (8.9%) on the previous month.

## Performance

### Target

- At least 75% of patients should start treatment within 62 days (without suspensions) of first being suspected of cancer. Data published for time periods before December 2020 are not subject to the target.
- The **planned care recovery plan** (<https://gov.wales/transforming-and-modernising-planned-care-and-reducing-waiting-lists>) established a new target of 80%, to be reached by 2026.

## Chart 15: Percentage of pathways where the patient started their first definitive treatment within the target time, August 2019 to August 2022

Source: Suspected Cancer Pathway, Digital Health and Care Wales (DHCW) and National Data Resource (NDR)

### Suspected cancer pathway (closed pathways) on StatsWales

(<https://statswales.gov.wales/Catalogue/Health-and-Social-Care/NHS-Hospital-Waiting-Times/Cancer-Waiting-Times/Monthly/>)

In August, 52.5% (887 out of 1,691) of pathways started their first definitive treatment within 62 days of first being suspected of cancer. This was 1.0 percentage points lower than the previous month, 11.7 percentage points lower than August 2021 and is the lowest figure since the current data series began.

## Quality and methodology information

All quality and methodology information in relation to this statistical release can be found in the **NHS activity and performance summary: quality report** (<https://gov.wales/nhs-activity-and-performance-summary-quality-report>)

## Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural wellbeing of Wales. The Act puts in place seven wellbeing goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators (“national indicators”) that must be applied for the purpose of measuring progress towards the achievement of the wellbeing goals, and (b) lay a copy of the national indicators before Senedd Cymru. Under section 10(8) of the Well-being of Future Generations Act, where the Welsh Ministers revise the national indicators, they must as soon as reasonably practicable (a) publish the indicators as revised and (b) lay a copy of them before the Senedd. These national indicators were laid before the Senedd in 2021. The indicators laid on 14 December 2021 replace the set laid on 16 March 2016.

Information on the indicators, along with narratives for each of the wellbeing goals and associated technical information is available in the **Wellbeing of Wales report** (<https://gov.wales/wellbeing-wales>).

Further information on the **Well-being of Future Generations (Wales) Act 2015** (<https://gov.wales/well-being-future-generations-wales-act-2015-guidance>).

The statistics included in this release could also provide supporting narrative to the national indicators and be used by public services boards in relation to their local wellbeing assessments and local wellbeing plans.
