**Ex-ante Evaluation and Strategic Environmental Assessment for  
Ireland Wales Cooperation Programme 2014-2020**

**STRATEGIC ENVIRONMENTAL ASSESSMENT**

**NON-TECHNICAL SUMMARY**

**SEPTEMBER 2014**

# **1 INTRODUCTION**

## **1.1 Purpose**

1.1.1 This Strategic Environmental Assessment (SEA) report of the Ireland Wales Co-operation Programme (IWCP) has been produced by Bangor University in association with Old Bell 3 Ltd. on behalf of the Welsh European Funding Office (WEFO). **This Non-Technical summary of the SEA provides a brief overview of the SEA Report findings and should be viewed alongside the full SEA and the proposed IWCP.**

1.1.2 The SEA has been carried out in accordance with the requirements of the European SEA Directive (2001/42/EC) and the implementing regulations for Wales and for Ireland.

1.1.3 The SEA has been carried out in conjunction with the development of the IWCP and its overall Ex-Ante Evaluation. It aims to ensure that the IWCP contributes positively to a high level of environmental protection, as well as supporting the goal of the Welsh and Irish Governments of working towards sustainable development. It does this:

- by setting out the environmental parameters within which the IWCP will operate;
- by identifying, describing and assessing likely significant effects on the environment arising from IWCP's implementation;
- by considering reasonable alternatives.

1.1.4 The SEA sets out to influence strategic changes that might result from the assessment. Changes should have already occurred by the time that the report is finalised, confirming that the right approach has been taken to the SEA process, namely that it has been used to improve the environmental performance of the programme, rather than merely presenting a snapshot of it.

## **1.2 SEA requirements**

1.2.1 The Environmental Report complies with the requirements of the relevant regulations, namely the Environmental Assessment of Plans and Programmes (Wales) Regulations 2004 (Welsh Instrument 2004 No. 1656 (W.170)); S.I. No. 435/2004 - European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004; and S.I. No. 200 of 2011 - European Communities (Environmental Assessment of Certain Plans and Programmes) (Amendment) Regulations 2011.

Table 1 identifies those sections **within the main Environmental Report** that relate to the specific requirements of the regulations.

**Table 1: References to the SEA Regulations**

<b>Environmental Report - Information to be included</b>	<b>Relevant Section</b>
1. An outline of the contents, main objectives of the plan, and of its relationship with other relevant plans and programmes.	<b>Section 9, page 66</b> <b>See also pp73-74</b>
2. The environmental characteristics of areas likely to be significantly affected.	<b>Sections 4-7 , pp13-60</b>
3. Any existing environmental problems which are relevant to the plan including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC.	<b>Section 8, page 61</b>
4. The environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan and the way those objectives and any environmental considerations have been taken into account during its preparation.	<b>Annex I</b>
5. The likely significant effects on the environment, including short, medium and long-term effects, permanent and temporary effects, positive and negative effects, and secondary, cumulative and synergistic effects, on issues such as: biodiversity; population; human health; fauna; flora; soil; water; air; climatic factors; material assets; cultural heritage including architectural and archaeological heritage; landscape; the interrelationship between the above factors.	<b>Section 11, page 79</b> <b>Annex II</b>
6. The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan.	<b>Section 11.1.9, page 84</b>
7. An outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken.	<b>Section 12, page 85</b>
8. A description of measures envisaged	<b>Section 13, page 93</b>

concerning monitoring in accordance with Regulation 17.	
9.. A non-technical summary of the information provided under paragraphs 1 to 9.	<b>This document</b>

### **1.3 The SEA and other EU Directives and Standards**

- 1.3.1 The IWCP is subject to the provisions of the SEA Directive, and also to a wide range of other EU legislation, which is described in Annex I of the main report. This includes the EIA Directive, Water Framework Directive, Habitats and Birds Directives, the Marine Strategy Framework Directive and the Waste Directive.
- 1.3.2 As well as requirements set out under these laws, the EU provides a range of strategies and programmes which have been analysed in the formulation of the report.

## **2 SEA PROCESS AND ASSESSMENT METHODOLOGY**

### **2.1 Approach and overall SEA tasks**

2.1.1 The approach that has been adopted is based on a number of advisory documents, chiefly the guidelines of the former Office for the Deputy Prime Minister (ODPM) 2005, and the EC's guidance documents on implementing the SEA Directive including guidance on integrating climate change and biodiversity.

2.1.2 Note was also taken of guidance provided by the Environment Agency, the Countryside Council for Wales, RSPB, and the Scottish Executive. Relevant citations can be found in the footnotes of the Environmental Report, as well as in the references.

### **2.2 Challenges in undertaking the SEA**

2.2.1 The assessment was constrained by two key factors:

- The proposed IWCP is not spatial nor strictly thematic, but provides generic descriptions of the kind of activities likely to be supported. It can therefore be difficult at times to envisage potential significant environmental effects with certainty, and therefore a precautionary approach has been taken to the assessment.
- The plan is defined by the need to prioritise regional economic activity based on available funding and on the timescale over which it will operate. The identification and discussion of *reasonable* alternatives is limited to the availability of funding and the timescales and priorities described in the IWCP.

### **2.3 Development of SEA objectives**

2.3.1 The assessment is based on 17 overarching objectives, underpinned by 53 sub-objectives, as shown in table 2 below.

2.3.2 The objectives were selected as a result of a wide-ranging literature review, largely based on state of environment reports, assessments of previous Operational Programmes, sustainable development policies and strategies, environmental action plans and agency or NGO advice. These include (not exhaustive):

- European Commission Core Indicators<sup>1</sup>

---

<sup>1</sup>European Commission. Programming period 2014-2020. Monitoring and evaluation of European cohesion policy - European Regional Development Fund and Cohesion Fund. Concepts and Recommendations. Guidance

- EU 6th and 7th Environmental Actions Plan & Sustainable Development Strategy<sup>2</sup>
- Wales Environment Strategy<sup>3</sup>
- Wales National Ecosystem Assessment<sup>4</sup>
- Sustainable Development Indicators for Wales<sup>5</sup>
- Ireland's Environmental Assessment<sup>6</sup>
- Irish Sea Pilot<sup>7</sup>
- PISCES LIFE+ project<sup>8</sup>
- Ireland-Wales Operational Programme 2007-2013<sup>9</sup>

2.3.3 As well as these, a range of sectoral and thematic documents were analysed. The following is an indicative list of the kinds of documents reviewed, and is not exhaustive: Ireland Offshore Renewable Energy Development Plan (OREDPA) SEA<sup>10</sup>; the scope of SEA of Irish Sea Area 6 in regard to prehistoric remains<sup>11</sup>; Southern and Eastern Regional Assembly Operational Programme<sup>12</sup>; Energy in Ireland<sup>13</sup>; Ireland

- 2.3.4 Each of the constituent authorities' various biodiversity action plans and SEAs linked to spatial plans were likewise reviewed in developing objectives (see references).
- 2.3.5 The literature review resulted in the development of 51 objectives, which were then aggregated into the 17 objectives against which the programme was assessed (see table 4). Although some are somewhat generic in nature, they have been retained as sub-objectives in order to focus thinking and to express more clearly what the main objectives mean. Two further sub-objectives were recommended by Welsh statutory consultees and have been added, making 53 in total.

**Table 2: SEA Themes, Objectives and Sub-objectives**

<b>Protect and enhance natural and cultural heritage</b>	<b>Objective</b>	<b>Sub-objective</b>
	<b>A</b> Protect places, landscapes and buildings of historic, cultural and archaeological value	Deliver conservation programmes for monuments in state care, alongside the designation of further heritage assets
	<b>B</b> Protect and enhance landscapes, seascapes, townscapes and the countryside	Improve the quality of the local built environment
		Develop an integrated approach to eco-system health
		Improve management of common land
		Protect and enhance access to the coastline and countryside
<b>C</b> Protect and enhance biodiversity	Avoid significant alteration to urban landscape character	
	Protect internationally, nationally and locally designated nature conservation sites	
	Protect Biodiversity Action Plan (BAP) habitats and species, increase area of habitat	

<b>Protect and conserve natural resources</b>	<b>Objective</b>	<b>Sub-objective</b>
	<b>D</b> Protect and improve the region's water quality	Monitor and regulate known and emerging environmental hazards
		Protect and enhance the quality of groundwater, rivers, lakes, and coastal waters
		Comply with 'good' status under the Water Framework Directive (WFD)
		Protect and enhance salmonid and other fisheries
		Avoid physical disturbance to the water and water edge environment
		Reduce diffuse pollution from agriculture, acid precipitation and other sources
	<b>E</b> Protect the water resource and ensure its sustainable use	Maintain levels of abstraction and recharge within the carrying capacity of the region
		Maintain and enhance ground and surface water physical, ecological and chemical quality
		Monitor use and discharge rates

<b>Protect and conserve natural</b>	<b>Objective</b>	<b>Sub-objective</b>
	<b>F</b> Guard against land contamination, encourage reuse of existing buildings and of previously developed land of low ecological quality	Use planning policy to identify suitable previously developed land
		Use planning policy to encourage the re-use of existing buildings
		Monitor and regulate known and emerging environmental hazards. Maintain and update contaminated land data and strategies

	<b>G</b> Minimise the requirement for energy generation, promote efficient energy use and increase the use of energy from renewable resources	Generate up to twice as much renewable electricity annually by 2025 as is generated today
		Introduce higher energy conservation standards in constructing new housing
	<b>H</b> Minimise waste, and increase re-use, recycling and recovery rates	Restrict biodegradable materials going to landfill
		Re-use materials from existing buildings
	<b>I</b> Minimise the need to travel; provide alternatives to car use	Optimise opportunities to work locally
		Promote sustainable transport
		Protect and enhance public transport systems
		Legislate to place a duty to provide cycle routes in key areas

Maintain and improve the human environment	Objective	Sub-objective
	<b>J</b> Limit and adapt to climate change	Reduce emissions of greenhouse gases
		Provide measures to enable adaptation to climate change
		Ensure infrastructure and material assets are resilient to potential increases in extreme weather events (such as storms, floods and heat waves, as well as extreme cold weather).
		Ensure that communities are resilient to changes in weather patterns by protecting resources and by promoting awareness of the need to adapt to extreme weather events
		Build in flexibility to enable the modification of assets in the future without incurring excessive cost.
		Work to ensure we have a sustainable food and fisheries industry
		Protect and manage soil
		Reduce the risk of flooding
		Complete flood and coastal risk plans

Maintain and improve the human environment	Objective	Sub-objective
	<b>K</b> Protect and improve air quality	Minimise the use of processes that produce toxic air pollutants, and incorporate extensive safety and capture processes for those that occur
		Minimise environmental nuisance such as fly-tipping, littering, dog fouling, graffiti, noise pollution, and light pollution
	<b>L</b> Improve physical and mental health and reduce health inequalities	Promote the provision of opportunities for disadvantaged communities.
		Monitor and regulate known and emerging environmental hazards
		Protect and enhance existing greenspace

<b>M</b> Improve public access to land	Improve opportunities to access green space
	Ensure that disadvantaged communities have opportunities to access greenspace and open countryside and to benefit from such access

<b>Protect the marine environment</b>	<b>Objective</b>	<b>Sub-objective</b>
	<b>N</b> Protect seabed features so that they can support the processes, habitats and species characteristic of the marine landscapes.	Protect coastal processes from ecologically-significant change due to human activity, and reverse such change where practicable
		Protect seabed habitats from ecologically - significant change due to human activity, and reverse such change where practicable.
		Protect biogenic structures from ecologically-significant change due to human activity, and reverse such change where practicable.
	<b>O</b> Protect water column features so that they can support the characteristic processes, habitats and species	Protect the water column features from ecologically-significant change due to human activity, and reverse such change where practicable.
	<b>P</b> Protect the water quality of the component water column features so they can support the processes, habitats and species characteristic of the water column and associated seabed habitats.	Maintain or recover water quality to within defined standards which aim to prevent 'undesirable disturbance' caused by eutrophication.
		Ensure that environmental standards are not exceeded.
Maintain noise and vibration levels below precautionary standards aimed at protecting vulnerable marine species from disturbance		
Reduce input of litter to the marine environment to below levels aimed at protecting vulnerable marine habitats and species		
<b>Q</b> Maintain biota quality	Ensure standards for contaminants in biota are not exceeded	

2.3.6 It should be noted that the objectives are not scored or weighted, since they are interdependent and potentially mutually reinforcing. However, it is recognised that *within* some objectives there is a hierarchy of priority concerns. For example the objective to 'protect and enhance biodiversity' implies that in some circumstances, *avoidance* must be the only option (in the case of ancient woodlands, say, or of designated habitats and species), whereas in others, *mitigation* and/or *compensation* might be appropriate. In any case, all mitigation and compensation measures must ensure an *enhancement* of the status quo wherever possible, should relate to any development proposal in terms of scale, and should be local to that proposal.

## **2.4 Development of SEA indicators**

2.4.1 A set of indicators was developed using similar sources of literature, including a number of constituent spatial plans and strategies and their SEAs (see references to the main report), and linked to the 53 sub-objectives referred to above. The indicators and the objectives to which they relate are shown in tables 8 and 9 of the main report and in Annex I.

## **2.5 Assessment methodology**

2.5.1 The assessment consists of analysing each of the IWCP's key measures against the objectives of the SEA, based on a range of criteria derived from the Directive and supporting guidance. The results are aggregated and set out as a basic compatibility test and can be seen in section 11 of the main report. Annex II of the main report provides a fuller account of this assessment.

2.5.2 The criteria for the detailed analysis were developed on the basis of advice given in the ODPM guidance document, which refers to '*...scale and permanence and the nature and sensitivity of the receiving environment.*' (p.32) and the advice given by DG Environment<sup>23</sup>

2.5.3 The assessment is made on the basis of a number of assumptions regarding terminology. Some reference has been made to the ecosystem approach. This term is not used in the draft IWCP, although reference is made to ecosystem services in relation to ToA6 (page 60). The term 'climate change adaptation' is used widely. It is assumed that this refers to various activities including technological approaches as well as land management and spatial policies and planning. The IWCP aims to address climate change concerns in the context of a 'jobs and growth agenda'.

### **3 ENVIRONMENTAL ISSUES**

#### **3.1 Introduction**

3.1.1 The area comprises three distinct 'environmental systems' - North and West Wales; south east/mid-east Ireland; the Irish Sea. Whilst each has its own environmental characteristics, there is a clear environmental relationship between them, especially in terms of climate and marine currents. Although the prevailing winds are west to north west, there may be some effects in terms of air currents, although given the largely rural nature of both regions (apart from the obvious exception of Dublin), air pollution from industry and transport is unlikely to be a significant transboundary factor.

3.1.2 The scoping process sought to identify the key environmental issues that will influence the development of the IWCP, and to highlight those issues that are relevant to the achievement of its objectives. Sections 4 to 7 of the main report describe the current state of the terrestrial and marine environments in Ireland and Wales, in order to provide a context for understanding the potential for both positive and negative effects that may arise from implementing the IWCP.

#### **3.2 Sourcing baseline data**

3.2.1 'Ireland's Environment - An Assessment' was published by the Environmental Protection Agency in 2012<sup>24</sup>. In Wales, the State of the Environment Statistical Bulletin (2012) provides an annual summary on a range of indicators reviewing the state of the environment in Wales, and allocates them a status based on their long term trends<sup>25</sup>. The results for individual indicators can be found in the 'State of Environment Report' that is published alongside the bulletin. In addition to the report, data are available via the StatsWales website<sup>26</sup>. These documents provide important information at a national level, as well as useful statistics and assessments of pressures and trends. They also informed the formulation of the SEA objectives in this report.

#### **3.3 Summary of issues**

3.3.1 The European Commission is set to publish a Seventh Environmental Action Programme, which will address a number of issues, including:

---

<sup>24</sup> [http://www.epa.ie/pubs/reports/indicators/00061\\_EPA\\_SoE\\_2012.pdf](http://www.epa.ie/pubs/reports/indicators/00061_EPA_SoE_2012.pdf)

<sup>25</sup> <http://wales.gov.uk/topics/statistics/theme/environment/?lang=en#>

<sup>26</sup> <https://statswales.wales.gov.uk/Catalogue/Environment-and-Countryside>

- the rapidly changing external conditions and the **increasingly interlinked nature of environmental, economic and social challenges**
- **increased growth in the demand for natural resources and the impacts this has on the environment**
- the enlargement of the EU and the increased diversity of national characteristics and circumstances
- **pressure on ecosystems, biodiversity loss, waste generation and air quality in urban areas**
- the uneven implementation of environmental law across Europe.

The issues highlighted have a clear resonance with this report, and reflect some of the concerns expressed below.

- 3.3.2 Each of the 'environments' described in sections 6 to 8 has its own environmental priorities and challenges. In Wales, **development, agricultural intensification, erosion, pollution and loss of carbon** are all potential challenges, with potential impacts on human health, food productivity, biodiversity, ecosystem functions and the economy. **Halting biodiversity loss** is a major concern.
- 3.3.3 In Ireland, two primary areas where unsatisfactory conditions are prominent and extensive are **eutrophication** and other **water pollution** and the **unsatisfactory conservation status of natural habitats** and species. **Remediation of contaminated land** is also an important issue<sup>27</sup>. A number of dwellings in rural areas on both sides of the Irish Sea rely on septic tanks, some of which are in poor condition and pose a threat to soils and groundwater. This is highlighted in a number of Irish local plans.
- 3.3.4 **Fragmentation** through development, and the **conversion of land** from one use to another, as well as **intensification**, are seen as some of the underlying causes. **Erosion and silting**, as well as **nutrient loading**, have a particular negative effect on the quality of rivers and their chemistry and biodiversity. Furthermore, major land-use changes can significantly impact the **quality of the marine (particularly coastal) environment** (e.g. sedimentation, hydrographic change, impacts on benthic eco-system, etc).
- 3.3.5 In both regions, protected European areas and species are under pressure from the activities of other sectors. **Invasive species** are on the

---

<sup>27</sup> South-East Regional Authority Regional Planning Guidelines 2010-2022. Environmental Report and Habitats Directive Assessment page 28

increase, a situation likely to be exacerbated by climate change. In some areas, invasive species are seen as a particular threat<sup>28</sup>.

- 3.3.6 For Ireland and for Wales, the issue of **population growth** with its attendant **demands on natural resources**, is a common theme. An **increase in traffic** will increase the likelihood of **local and regional air pollution**, as well as contributing greenhouse gases. For both regions, **climate change** will increase the likelihood of devastating storm conditions, and **sea level rise** poses a threat to the coastal communities on both sides of the Irish Sea. **Increasing tourism development** along the coasts is likely to add to pressures unless managed.
- 3.3.7 The threats from human activities to marine geological and geomorphological features derive from significant **dredging** and **dumping** activities and from **engineering works**. For most of these, effective present day controls exist but are not applied directly for Earth heritage conservation purposes because important sites have not been identified. In Wales, Cadw is aware of the significance of drowned landscapes and is particularly concerned about the possible impact of **offshore development**. Cable-laying for connection from offshore wind turbines to the inshore infrastructure are likely to cross sensitive areas where buried Mesolithic littoral settlements might be expected.
- 3.3.8 Threats to marine biodiversity are also of concern. These include **by-catch**, the incidental entanglement in nets of marine mammals such as small cetaceans and seals. The EU's By-catch Regulation 812/2004 requires monitoring of cetacean by-catch in pelagic trawl fisheries. **Overfishing** will potentially impact negatively on marine mammals directly through reducing the biomass of fish available, and indirectly by causing changes in the marine ecosystem. **Climate change** will result in changes to structures and distribution of marine species, and the increased possibility of disease. Warm water species may increase, as cold water species move northwards. Rising sea levels may alter the locations of haul out sites for seals, or reduce their availability. **Pollution** poses a threat to marine ecosystems. PCBs and toxic algal blooms are known to be associated with disease and neurological dysfunction in marine mammals<sup>29</sup>. The integrity of designated shellfish waters is critical to maintaining sustainable livelihoods, in enabling local consumption and in

---

<sup>28</sup> Wexford County Development Plan 2013-2019. Volume 8: Strategic Environmental Assessment June 2012

<sup>29</sup> Jepson, P.D., Bennett, P.M., Deaville, R., Allchin, C.R., Baker, J.L., Law, R.J. 2005. Relationships between polychlorinated biphenyls and health status in harbour porpoises (*Phocoena phocoena*) stranded in the United Kingdom. Environmental Toxicology and Chemistry 24:238-248

minimising processing costs. Shellfish also act as a nutrient sink thus contributing to water quality improvement.

- 3.3.9 **Plastics** are an increasing threat to marine mammals, which ingest particles, become entangled in plastic objects or choke on them. **Noise** is of increasing concern in the marine environment, especially with the development of offshore energy rigs and wind farms, as well as an increase in marine transport and leisure craft. Studies have shown a sensitivity of marine mammals to construction and operational noise<sup>30</sup>. Finally, the threat of **invasive species** from seaborne traffic should not be overlooked, especially in the context of cross-border marine tourism.
- 3.3.10 Resultant effects are broadly of five types. They may be **spatial**, for example air or sea borne pollutants and invasive species may be carried across great distances, so that the effects are felt internationally. In the case of the IWCP, the prevailing winds are south-west to north-east, as are the sea currents, so that polluting effects of this sort are likely to be felt in the Isle of Man and north into Scotland. Agricultural pollutants will have a diversity of negative effects downstream, affecting the environments of coastal communities. The case of small protected areas is of particular concern, since efforts to conserve and enhance their conservation status are likely to be challenged by activities taking place surrounding or well upstream from the site.
- 3.3.11 Interactions may also have a **temporal** dimension, in that effects may not be felt for a considerable time. Climate change is an example, whereby the effects of Victorian industrialisation have only become apparent in recent decades. On a smaller scale, the ingestion of pollutants by communities of plants or animals may take time to have an effect, but may result in a catastrophic breakdown as thresholds are exceeded. This is of particular concern, since problems may not be apparent until a critical, and probably unknown, threshold is surpassed. The build-up of toxins in underground watercourses are another area of concern.
- 3.3.12 Interactions are also **sectoral**. The activities of, say, the agriculture sector will have a profound impact on the capacity of the water sector to deliver clean water to communities. For its part, the water sector will impact on

Behavioural reactions of free-ranging porpoises and seals to the noise of a simulated 2 MW windpower generator. *Marine Ecology Progress Series* 265:263-273

other interests by its abstraction policies, and by its take of land for reservoirs. Both activities will diminish biodiversity, and will also impact on the availability of land for agriculture or for development. Tourism is an important economic driver in Wales and in Ireland, but it makes significant demands on natural resources, that may become unsustainable. There may also be impacts on social and cultural interests, as places and cultures become commodified, and as the availability of housing stock diminishes for local people. A major element factor in tourism in both areas is seafood. This sector relies on high water quality in order to meet appropriate standards.

- 3.3.13 Such interactions are **thematic** - air quality is a public health issue, but it is also a factor in climate change. These are environmental issues, but they are also social and economic. Flood and coastal protection schemes have in some cases impacted on biodiversity<sup>31</sup>. A significant number of houses in some areas are connected to septic tanks<sup>32</sup>. Septic tank failures could result in groundwater pollution, which is a public health hazard and may impact on biodiversity. Landscape is linked both to historic and cultural assets and to biodiversity.
- 3.3.14 **Synergistic** effects relate to the interactions of any of the above effects, in that any one activity may, by itself, not have a significant effect, but that taken together the effect may be profound, both positive and negative. This may derive within a single sector, such as energy or housing whereby a discrete, relatively few number of rigs, masts or dwellings may not have a significant visual or landscape impact, but with increases in infrastructure the landscape and biodiversity will be impacted on. Synergistic effects may also occur as a result of the combination of interventions across sectors and interests. Thus the loss of farmland birds may be attributed to a number of factors, of which agricultural practices may not be the only one. Cumulatively, such synergistic effects may result in the exceedance of thresholds and may have significant results. Conversely a range of mutually supporting activities may have significant positive effects.
- 3.3.15 The clear conclusion is that projects assessed through the IWCP will need to be considered not only for their immediate environmental and other effects, but on a broader consideration of spatial and temporal basis, and for their effects across other sectors and themes. The ecosystem

---

<sup>31</sup> See for instance Kilkenny City and Environs Development Plan SEA 2008 page 5

<sup>32</sup> For example, in North Tipperary in 2006 more houses were connected to septic tanks (10,990) than to public sewers (10, 877). See North Tipperary County Development Plan 2010-2016 Strategic Environmental Assessment NTS page 13

approach should be adopted to any project or proposal that emerges (see Annex IV to the main report for a discussion on the ecosystem approach).

## 4 THE IRELAND-WALES CO-OPERATION PROGRAMME

### 4.1 Introduction and context

- 4.1.1 The Ireland-Wales (IW) Co-operation Programme covers an area of about 41,000km<sup>2</sup>, with a population of approximately 4.5 million people. The area comprises Dublin, Mid-East & South-East, and South-West regions in Ireland and the Isle of Anglesey, Gwynedd, Conwy, Denbighshire, Ceredigion, Pembrokeshire, Carmarthenshire, Swansea, Flintshire and Wrexham in Wales. Due to changes in local government structures in Ireland, North Tipperary County Council and South Tipperary County Council will merge which may result in the whole county being included within South East Ireland region and therefore becoming part of the Programme area. Seventy per cent of the population of the programme area is based in Ireland, and thirty per cent in Wales; the population difference is largely due to the inclusion of the Dublin region where over half of the Irish population of the programme area lives.
- 4.1.2 The overall strategy of the EU, the Europe 2020 strategy, is about delivering smart, sustainable and inclusive growth. The Europe 2020 strategy aims for social and economic cohesion through effective investments in eleven thematic objectives (TOs), of which three (TO1, TO5 and TO6) have been selected for the programme.
- 4.1.3 A critical element is Horizon 2020, the EU's Framework Programme for research and innovation. This consists of three pillars, namely 'excellent science', 'industrial leadership' and 'societal challenges'. The specific societal challenges most relevant for the IW programme are:
- food security
  - sustainable agriculture and forestry
  - marine and maritime and inland water research
  - the Bio economy
  - Climate action, environment, resource efficiency and raw materials;
  - Europe in a changing world - inclusive, innovative and reflective societies.
- 4.1.4 The 'Maritime strategy for the Atlantic Area' (adopted in 2011) and the subsequent 'Action Plan for a Maritime Strategy for the Atlantic Area' (published in May 2013) are both significant for the IW cooperation programme given the prominence of the Irish Sea within the programme area. The Action Plan considers responses to the challenges of delivering growth, reducing the carbon footprint, sustainable use of the sea's natural resources, responding effectively to threats and emergencies and

implementing an "ecosystem" management approach in Atlantic waters. It contains four overarching priorities:

- Promote entrepreneurship and innovation;
- Protect, secure and enhance the marine and coastal environment;
- Improve accessibility and connectivity;
- Create a socially inclusive and sustainable model of regional development.

4.1.5 Table 3 summarises the types of action that will be supported by the programme. Note that the types of action are numbered for the purposes of this assessment only.

**Table 3: Priority Axes and Types of Action**

<b>PRIORITY AXIS</b>	<b>THEMATIC OBJECTIVE</b>
<b>Cross-border Innovation</b>	<b>Strengthening research, technological development and innovation</b>
	<b>TYPES OF ACTION</b>
	<ol style="list-style-type: none"> <li>1. Bringing together organisations who would not usually work together (e.g. cross and multi-sector working, bringing together HEIs and research institutes with SMEs and other public private and third sector partners) to stimulate cross-border collaboration and the development of fresh ideas and concepts;</li> <li>2. Support businesses to undertake innovation in line with the shared priorities of the smart specialisation strategies and improve innovation supply chains between businesses and with academia;</li> <li>3. Piloting of initiatives to test innovative products, processes or services in areas with commercial potential including cross-border research and pilot projects to demonstrate practical application and transferability to business and wider communities;</li> <li>4. Support the development of prototypes, pilot schemes, demonstrations and working models;</li> <li>5. Cross-border demonstration, testing, commercialisation and marketing of new products, services, processes and systems relating to the shared priorities of the Smart Specialisation Strategies;</li> <li>6. Creation of cross-border innovation clusters or networks such as creating a platform for HEI , third sector, businesses and public sector agencies to collaborate and co-ordinate their activities on a cross-border basis to meet the needs of the Programme area –</li> </ol>

	<p>for example a portal based on the Irish Sea;</p> <p>7. Joint cross-border design of innovative solutions which could include piloting, testing or finding ways to overcome barriers to innovation particularly those faced by SMEs and those faced by underrepresented groups e.g. disabled people;</p> <p>8. Operations which develop the concept of the citizen scientist (i.e. community involvement) working innovatively with HEIs and other research organisations.</p> <p>9. Flexible support for innovation which targets developing innovative business ideas to underrepresented groups e.g. disabled people.</p> <p>10. Transferable models to assist internationalisation of SMEs and trade developed using cross-border partnerships.</p>
--	---

PRIORITY AXIS	THEMATIC OBJECTIVE
Adaptation of the Irish sea and Coastal Communities to climate change	<b>Promoting climate change adaptation, risk prevention and management</b>
	<b>TYPES OF ACTION</b>
	<ol style="list-style-type: none"> <li>1. Providing mechanisms and platforms for the sharing of knowledge about risks and opportunities from climate change between stakeholders in Ireland and Wales. These could include web portals, workshops/seminars etc.;</li> <li>2. Jointly commissioned research where there are clear gaps in the evidence based on shared climate change impacts on the Irish Sea and coastal communities;</li> <li>3. Developing assessment tools which assess the impact, risk and vulnerability of the programme area to climate change, and which can increase the knowledge basis and support the decision making processes of public sector bodies and the general public;</li> <li>4. Transferring knowledge, expertise and best practice on adaptation measures between the two regions of the Programme area. These could include how to' guides, best practice databases, workshops/seminars/conferences, web portals;</li> <li>5. Marine and coastal land environment improvement, including practical management methods (e.g. Marine Spatial Planning) working with local stakeholders and involving communities;</li> <li>6. Sustainable management/protection of ecosystems and biodiversity habitats and species in coastal waters and related research work into integrated water and flood risk management in</li> </ol>

	<p>river catchment areas;</p> <p>7. Stimulating awareness amongst the communities of the Programme area to influence behavioural change, knowledge awareness and best practice with regard to climate change adaptation including through web portals containing examples of good practice, newsletters and annual reports, seminars, conferences and good practice guides.</p>
--	---

PRIORITY AXIS	THEMATIC OBJECTIVE
<b>Natural and Cultural Heritage and Resources</b>	<b>Protecting the environment and promoting resource efficiency</b>
	<b>TYPES OF ACTION</b>
	<ol style="list-style-type: none"> <li>1. Cross-border promotion of business opportunities which take full advantage of the sustainable management of natural and cultural resources, such as niche tourist attractions, including coastal and cultural attractions and maritime heritage sites – including cross-border marketing approaches; and the implementation of cross-border events and communication measures to increase interest;</li> <li>2. Cross-border maritime tourism development –such as support for tourism at sea – including developing and testing best practice models;</li> <li>3. Development of entrepreneurial activity, SMEs and micro-enterprises active in the natural heritage and sustainable resource management, tourist, creative and cultural heritage sectors (particularly utilising existing strengths in these sectors);</li> <li>4. Enhancing the environment – particularly the coastal and marine environment – to make the area a more attractive place to visit. This may include activities such as maintaining the blue flag status of beaches. This may also include engaging communities in the conservation of their natural and cultural heritage – including creating capacity within communities to engage and share best practice and ideas in innovative community, environmental and economic development; support for the development and promotion of joint environmental enhancement activities; and cross-border partnerships between research stakeholders and the community;</li> <li>5. Community regeneration through sustainable development and job creation based on cultural and natural heritage tourism – particularly focused on coastal and rural communities and where common problems are faced or opportunities are available on both sides of the Irish Sea;</li> </ol>

	<ol style="list-style-type: none"><li data-bbox="411 194 1415 344">6. Using traditional, cultural and creative strengths to improve an area and make it a more attractive place to visit – including the sharing of expertise and developing projects based on joint strengths;</li><li data-bbox="411 376 1415 512">7. Sharing expertise on a cross-border basis to make the area a more attractive place to visit – including the development of knowledge transfer clusters.</li></ol>
--	---

## 5 ASSESSMENT OF THE IRELAND-WALES CO-OPERATION PROGRAMME

### 5.1 Testing the compatibility of the SEA objectives and the RDP measures

5.1.1 The purpose of this section is to analyse each type of action and to consider the likelihood of environmental effects, and the significance of those effects as far as possible. Table 4 provides an overall assessment of the measures. A more detailed analysis can be found in the main report and in Annex II to the report

**Table 4: Overall assessment**

Thematic Objective/Type of Action	Likely ✓/x	Comments
Strengthening research, technological development and innovation	1	?/✓ Some potential in terms of sustainable use of natural resources/climate change adaptation/human wellbeing. Otherwise generally neutral. Unlikely to reduce travel, and projects may stimulate more cross border travel.
	2	0 Some potential in terms of managing water and efficient use of energy where these are the subjects of the innovation. Unlikely to reduce the need to travel.
	3	?/✓ Depending on the nature of the process or product, some potential for minor positive environmental outcomes including air quality, energy and water management.
	4	?/✓ As above, this depends on the type of action proposed. Most likely to deliver on sustainable use of natural resources.
	5	?/✓ As above.
	6	? Positive environmental outcomes will depend on what are seen as the needs of the area and by whom. Requires careful project assessment. Could address human wellbeing.
	7	✓ Likely to deliver on sustainable natural resource use, reductions in needing to travel by providing local access to resources.
	8	?/✓ Although the proposal is unlikely in itself to deliver environmental benefit in the short term, it will promote public engagement and support for environmental innovation.
	9	0 Unlikely to result in significant environmental benefits, although this depends on the nature of innovative business ideas.
	10	? Probably neutral overall, but there may be an increase in traffic. 'Internationalisation' may result in some use of

			air traffic.
--	--	--	--------------

Thematic Objective/Type of Action		Likely ✓/x	Comments
Promoting climate change adaptation, risk prevention and management	1	?/✓	Some potential to promote good practice in adaptation, which should result in positive measures within the life time of the programme - although this action provides the <u>platform</u> for such promotion and knowledge sharing - important to ensure that this is high quality and accessible.
	2	✓	Development of an evidence base is central to decision making - should result in environmental benefit in the medium/long term.
	3	✓	This action combines the previous two - providing a platform for sharing knowledge and for assessing state and responses. Should be beneficial in the long term.
	4	✓	Similar to the above, with some likelihood of positive effects.
	5	?/✓	Should result in significant benefits, especially to water quality, flood amelioration and reduction in erosion. It is critical, however that the ecosystem approach be adopted - 'improvement' may not necessarily incorporate natural systems.
	6	✓✓	This action is likely to result in significant and wide ranging positive environmental effects, both to coastal and to marine environments.
	7	✓	Linking to actions 1-4, with potential for significant positive effects in the medium to long term, especially in the sphere of energy and water use, waste management and innovative approaches to flood management.

Thematic Objective/Type of Action		Likely ✓/x	Comments
Protecting the environment and promoting resource efficiency	1	?/x	Critical appraisal of proposals will be necessary to avoid unforeseen impacts arising from tourism pressures - erosion, congestion, traffic, loss of character etc as a result of 'taking full advantage...' especially at key sites already under pressure. Opportunity to recycle income into conservation?
	2	?/x	Depends on the nature of tourism development - increase in coastal infrastructure may be necessary; increases in marine traffic may disturb sensitive species; diving may generate pressures on sensitive habitats and archaeology.
	3	?/✓	May increase capacity to improve biodiversity and heritage management and to promote their conservation.
	4	✓	Likely to be positive, especially as maintaining coastal

			quality will require interventions upstream to ensure water quality, upland soil management etc - ecosystem approach central to this proposal. Need to be clear about defining 'attractive'.
	<b>5</b>	✓	As above - supporting local initiatives will increase capacity for environmental management.
	<b>6</b>	✓	As above - developing and demonstrating traditional and creative skills will require interventions in environmental management.
	<b>7</b>	?/✓	Knowledge exchange/sharing expertise will be central in supporting other measures.

5.1.2 In some cases it can be difficult to determine the likelihood of significant impacts. In fact, it can be difficult to agree whether *significance* at this level is used in the context of the proposed programme and the environment within which projects will operate individually or cumulatively, or whether it is used in the context of the whole of the environment covered by the two regions. There may for instance be locally significant effects as a result of projects that may be not apparent or considered significant at this strategic level.

5.1.3 In this case the assessment is based on likely significant effects on the Irish-Welsh coastal and marine environments over the lifetime of the programme. This is not to say that longer term considerations have not been made, nor that a neutral score necessarily means that there will be no long term benefit beyond the timescale of this programme. Annex II provides a more detailed assessment.

5.1.4 The assessment is made on the basis of a number of assumptions regarding terminology. Some reference has been made to the ecosystem approach. This term is not used in the draft IWCP, although reference is made to ecosystem services in relation to ToA6 (page 60). The term 'climate change adaptation' is used widely. It is assumed that this refers to various activities including technological approaches as well as land management and spatial policies and planning. The IWCP aims to address climate change concerns in the context of a 'jobs and growth agenda'.

#### 5.1.5 **Conclusion**

The programme overall provides opportunities to significantly impact positively on the environment, although it is not possible to be categoric. The previous programme iteration described **forty five** types of action, of which **eleven** could be said with confidence to offer significant positive effects; **eighteen** could offer positive effects depend on the type, scale and location of the actions. In **thirteen** cases the effects were thought

likely to be neutral or minimally positive. There were some concerns regarding **four** types of action, **two of which remain**.

5.1.6 The current iteration describes **twenty four** types of action. Of these, **nine** can be said with confidence to offer significant positive effects; **nine** can offer positive outcomes depending on the nature of the proposals; **three** are likely to be neutral overall. In **one** case, the extent of positive effects would depend on what are perceived as the 'needs' of a given community of interest. In most cases the effects may be **both positive and negative** depending on which environmental aspects are considered. The term 'attractive' needs to be defined in terms of what tourists and local people perceive it to mean.

5.1.7 In the case of the **two** types of action that raise concern, these relate to two key phrases that remain unaltered since the earlier programme iteration, namely: '...business opportunities to take full advantage of the sustainable management of natural resources...', in the context of '...niche tourist attractions...'; and the reference '...marine tourism development...'

There is a distinct possibility of negative environmental effects unless these are carefully assessed in the context of specific proposals, individually and cumulatively. Issues include seaborne invasives, disturbance to marine wildlife, marine infrastructure and coastal development.

5.1.8 Finally, whilst the emphasis on renewables technologies appears to be less in this iteration of the programme, it is worth noting that whilst they contribute significantly to reductions in carbon-based energy and to emissions, there remain some concerns over their effects on the amenity and the biodiversity of the coastal and marine environment.

5.1.9 As a matter of principle, the key to minimising negative environmental impact should be **avoidance**, and therefore projects likely to impact negatively on environmental interests should not be supported via this programme. Where there might be a conflict between one environmental interest and another, rigorous analysis of a project's implications should determine whether and how to proceed. Any project that might trigger an EIA should be subject to particular scrutiny.

## 6 ALTERNATIVES

### 6.1 Selection of alternatives to the proposed Co-operation Programme

6.1.1 The SEA Directive requires a discussion of reasonable alternatives to the proposed IWCP. The Directive does not specify what is 'reasonable' but does state (in paragraph 5.12) that a discussion of alternatives should include '*...the likely evolution of the current state of the environment without the implementation of the alternative*'. The Directive does not specify whether 'alternatives' means alternative programmes, or different alternatives *within* the proposed programme.

6.1.2 The purpose of analysing alternatives is to determine whether the proposal offers the optimal option in terms of sustainable development. The priorities and themes are not prioritised in any way, since the underlying rationale is that they are mutually reinforcing and therefore equally important for achieving the overall programme objectives.

6.1.3 Whilst it might be possible to envisage a range of scenarios, such as an 'economic growth first' scenario as opposed to, say an 'environment first' or a 'food security first' scenario, as is common in many policy forecasting studies, it would be inappropriate in this case, since the EU, Irish and Welsh Governments have indicated that the scenario they seek is a 'sustainable development' scenario which seeks to integrate social, environmental and economic priorities. There is thus no definitive 'first', since it is not the intention to seek 'trade-offs'.

6.1.4 Assuming this, there are a number of constraints in terms of alternatives including:

- Time - the IWCP is subject to a seven-year timescale. Whilst it may be possible to manage the pace of proposals within this time period, it is likely that most will not be realised within, say the first two years. It is not reasonable to discuss operational timescales beyond the remaining five-year window.
- Funding - this appears to have increased from €70.3m under the 2007-2013 programme to €79.2 for the 2014-2020 period<sup>33</sup>. It would not be reasonable to discuss alternative global figures, since the figure is settled.

---

<sup>33</sup> Commission implementing decision of 16 June 2014. Annex I page 22.

- Deployment of funds - Article 9 of the Common Provisions Regulation (1303/2013) identified eleven thematic objectives (TOs). Article 6 of the Specific Provisions for ERDF support for territorial co-operation requires that at least eighty per cent of the fund shall be concentrated on a maximum of four of the eleven TOs. The Ireland-Wales partnership might have considered alternative TOs to the three selected, or may have opted to select a fourth TO. It would perhaps not be reasonable to explore every possible combination, but it is noted that one TO places an emphasis on transport infrastructure, others on poverty and employment issues, another on education and another on public administration.
- Policy - it would not be reasonable to consider alternatives that are not consistent with EU, UK and Wales policies.

6.1.5 It is a requirement to consider what might be the state of the environment without programme implementation, and this 'do nothing' option is therefore one of the alternatives selected. By 'do nothing' is meant literally withdrawing support for interregional cooperation.

6.1.6 Another alternative might be to continue with the 2007-2013 programme.

6.1.7 It should be noted that of the eleven options identified in the regulation, the three TOs in the programme include the two most overtly environmental TOs available, namely:

- Promoting climate change adaptation, risk prevention and management
- Protecting the environment and promoting resource efficiency

6.1.8 Table 5 considers the likely effect on the SEA objectives of each of the following options:

- 1 Do nothing
- 2 Continue the existing Programme
- 3 TO group A - transport infrastructure
- 4 TO group B - education for employment
- 5 TO group C - institutional capacity
- 6 TO group D - private sector/SME investment
- 7 Implement the proposed Programme.

Whilst it is somewhat speculative, it reflects a detailed analysis of a wide range of programmes and strategies based around these themes, as well as an aggregated assessment of the objectives of the 2007-2013 and the

proposed 2014-2020 programme. The number of question marks reflects the levels of confidence and challenges in being categoric.

**Table 5: Assessment of alternatives**

		Alternatives						
		Do nothing	Continue as before	Transport infrastructure	Education for employment	Institutional capacity	SME/business	Proposed programme
SEA Objectives								
<b>A</b>	Protect places, landscapes & buildings of archaeological, historic & cultural value	?	✓?	x?	✓?	✓	x?	✓?
<b>B</b>	Protect/enhance landscapes, seascapes, townscapes & the countryside	?	✓?	x?	✓?	✓	x?	✓?
<b>C</b>	Protect/enhance biodiversity	?	✓	x?	✓?	✓	?	✓
<b>D</b>	Protect/ improve the region's water quality	x?	✓	x?	✓?	✓	O	✓
<b>E</b>	Protect the water resource; ensure its sustainable use	x?	✓	O	✓?	✓	?	✓
<b>F</b>	Guard against land contamination, reuse existing buildings & previously developed land of low ecological quality	x?	✓?	?	✓x	✓?	✓x	✓?
<b>G</b>	Minimise the requirement for energy generation use, promote efficient energy use & increase the use of energy from renewables	?	✓	x?	✓x	✓x	✓x	✓✓
<b>H</b>	Minimise waste; increase re-use, recycling & recovery rates	?	?	O?	✓?	✓?	✓x	✓?
<b>I</b>	Minimise the need to travel; provide alternatives to car use	?	O?	x	x	✓?	x	O?

<b>J</b>	Limit/adapt to climate change	x?	✓	x	✓?	✓?	?	✓✓
<b>K</b>	Protect/ improve air quality	x?	✓?	x	x?	✓?	x	✓?
<b>L</b>	Improve physical & mental health; reduce health inequalities	?	✓?	✓x	✓?	✓?	✓?	✓?
<b>M</b>	Improve public access to land	?	?	x?	✓?	✓?	0	✓?
<b>N</b>	Protect seabed features - support processes, habitats & species characteristic of the marine landscapes.	x?	✓?	0	0	✓?	?	?
<b>O</b>	Protect water column features - support the characteristic processes, habitats & species	x?	✓?	0	0	✓?	?	?
<b>P</b>	Protect water quality of component water column features - support processes, habitats & species characteristic of the water column & associated seabed habitats	x?	✓?	0	0	✓?	?	?
<b>Q</b>	Maintain biota quality	x?	✓	?	✓?	✓?	?	✓

### 6.1.9 Conclusion

The 2014-2020 IWCP contains elements of three of the alternatives, in that it aims to promote education and knowledge exchange, economic opportunities for both communities and for SMEs, and institutional capacity building. It builds on the 2007-2013 programme, partly as a result of research carried out in that programme on climate change and on the coastal and maritime environment<sup>34</sup>.

6.1.10 Given that more funding is available for delivering the programme objectives there appear to be significant opportunities for positive

<sup>34</sup> Whilst not explicitly linked to the 2007-2013 programme, documents such as the Irish Government's 'Harnessing our Ocean Wealth: An Integrated Marine Plan for Ireland' (2012); 'Delivering Green Potential' (2012); and the National Climate Change Adaptation Framework (2012) have helped to drive the 2014-2020 proposals

environmental outcomes. On that basis, and depending on interpretation of some terminology, the proposed programme appears to be optimal.

## 8 MONITORING

8.1.1 The SEA of the European-level INTERREG Programme<sup>35</sup> states that:

*'The highly indirectness (sic) of potential environmental effects of the INTERREG EUROPE Programme due to its nature does not allow the identification of measures to monitor possible impacts on the environment by projects funded by this Programme. Thus, the monitoring must aim to ensure that no adverse effects to the EU environmental objectives and the EU environmental policy are supported by INTERREG EUROPE, even if the direct impacts will occur in the long run only.'*

8.1.2 However, the INTERREG regulation<sup>36</sup> itself identifies a set of environmental indicators, for monitoring and reporting purposes.

**Table 6: Environmental indicators identified in the regulation**

<b>ENVIRONMENT</b>		
Solid Waste	tonnes	Additional waste recycling capacity
Water supply	persons	Additional population served by improved water supply
	m <sup>3</sup>	Estimated reduction of leakage in water distribution network
Wastewater treatment		Additional population served by improved wastewater treatment
Risk prevention and management	population equivalent	Population benefitting from flood protection measures
	persons	Population benefitting from forest fire protection and other protection measures
Land rehabilitation	hectares	Total surface area of rehabilitated land
Soil sealing	hectares	Change in land sealed due to development
Nature and biodiversity	hectares	Surface area of habitats in better conservation status
<b>ENERGY AND CLIMATE CHANGE</b>		
Renewables	MW	Additional capacity of renewable energy production

<sup>35</sup> see Dr. Dräger & Thielman (2014): [http://www.interreg4c.eu/fileadmin/User\\_Upload/PDFs/INTERREG\\_EUROPE\\_Environmental\\_Report.pdf](http://www.interreg4c.eu/fileadmin/User_Upload/PDFs/INTERREG_EUROPE_Environmental_Report.pdf)

<sup>36</sup> Annex to Regulation 1299/2013 on Specific Provisions for the support from the European Regional Development Fund to the European territorial cooperation goal.

Energy efficiency	households	Number of households with improved energy consumption classification
	kWh/year	Decrease of annual primary energy consumption of public buildings
	users	Number of additional energy users connected to smart grids
GHG reduction	Tonnes of CO <sub>2</sub> eq	Estimated annual decrease of GHG

8.1.3 The potential for internal tensions between these indicators is apparent. Furthermore they are headline quantitative indicators, and therefore do not in themselves provide sufficient information on environmental outcomes. Whilst WEFO and its Irish counterpart will monitor a number of outputs and outcomes related to the above indicators, it is important that the monitoring of effects is more widely scoped.

8.1.4 Table 7 summarises some of the key monitoring bodies for the SEA objectives identified in table 2. University departments are commissioned to carryout monitoring on behalf of the statutory bodies and the government departments. Organisations such as the Health and Safety Executive/Health and Safety Authority are responsible for monitoring workplace safety issues. Natural Resources Wales (NRW) monitors the state of Wales' woodlands and the condition of tree species, including threats from diseases, whilst in Ireland this function is likely to be shared between the National Parks and Wildlife Service (NPWS), the Environmental Protection Agency (EPA) and the Forest Service. Local councils on both sides of the Irish Sea undertake monitoring of the effects of their spatial planning policies as required by national laws, as well as a number of environmental and health topics including air quality and waste (in association with the statutory agencies). A number of non-governmental and public bodies play a significant role in managing and monitoring biodiversity. In Ireland these include the Heritage Council and An Taisce. In Wales the RSPB and Wildlife Trusts are important partners, working with statutory bodies through Wales Environment Link.

**Table 7: Monitoring against SEA objectives**

<b>Protect and enhance natural and cultural heritage</b>	<b>Objective</b>	<b>Monitoring bodies</b>	<b>Indicators (examples)</b>
	<p>Protect places, landscapes &amp; buildings of historic, cultural &amp; archaeological value</p>	<p><b>Cadw/ Royal Commission on Historic and Ancient Monuments/Heritage Council/An Taisce/National Monuments Service/Office of Public Works</b> monitor condition of historic buildings; condition of sites; maintain databases</p> <p><b>Local planning authorities</b> - monitor building standards; conservation areas; development management; protected buildings; maintain EIA databases</p> <p><b>NPWS</b> - manages and monitors protected landscapes</p> <p><b>Archaeological Trusts</b> maintain relevant data and carry out research</p>	<p>Condition of sites on agricultural land</p> <p>Number and condition of listed buildings</p> <p>LANDMAP culture aspects - condition</p> <p>Number of community-owned or managed biodiversity/amenity assets</p> <p>Register of SAMs - condition status</p> <p>National Inventory of Architectural Heritage</p> <p>Condition of National Heritage Areas - targets in management plans</p>
<p>Protect/ enhance landscapes, seascapes, townscapes and the countryside</p>	<p><b>Local planning authorities</b> - monitor building standards; conservation areas; development management; listed buildings; maintain EIA databases</p>	<p>LANDMAP visual and sensory aspects - condition</p> <p>Register of conservation areas</p> <p>Use of conditions with planning permissions</p> <p>Targets in local/county development plans</p>	

<p>Protect/enhance biodiversity</p>	<p><b>NRW/NPWS/Heritage Council</b> monitor condition of sensitive sites/species; Appropriate Assessment case studies/invasive species/data on landscape character</p> <p><b>Wildlife NGOs (e.g. Birdwatch Ireland/RSPB/Irish Rare Birds Committee)</b> monitor condition of species and habitats; maintain databases</p> <p><b>Local authorities</b> hold ecological data linked to LBAPs and county sites</p>	<p>Conservation status of SAC/SPA features dependent on/impacted on by agriculture</p> <p>Conservation status of target species/habitats dependent on/impacted on by agriculture</p> <p>Conservation status of NNR/SSSI features dependent on/impacted on by agriculture</p> <p>Presence &amp; condition of unfarmed features - hedges, scrub, fallow areas, buffers, trees, ditches &amp; ponds</p> <p>Percentage area of independently certified woodland (such as FSC)</p> <p>Lowland/upland farm birds - target species, presence, numbers - overwintering, breeding, spring feeding</p> <p>Woodland birds - target species, presence, numbers - overwintering, breeding, spring feeding</p> <p>Presence/location of invasive species</p>
-------------------------------------	---	---

Protect/enhance biodiversity (continued)		<p>Condition of Geological Conservation Review (GCR) sites that are SSSI's</p> <p>Common land in management agreements</p>
--	--	--

Protect and conserve natural resources	Objective	Monitoring bodies	Indicators (examples)
Protect and conserve natural resources	Protect/ improve the region's water quality	<p><b>NRW/EPA</b> monitor ecological and chemical condition of river systems; bathing water quality; maintains databases. <b>Water companies</b> monitor chemical quality</p> <p><b>Local authorities</b> also carry out monitoring of water quality</p> <p><b>NPWS</b> carry out/monitor works linked to water ecosystems</p>	<p>Bank erosion remediated (length)</p> <p>Chemical/ecological quality of rivers</p> <p>Number of agriculture-related pollution incidents</p> <p>Eutrophication statistics</p> <p>Estuary water condition</p> <p>Bathing water quality</p> <p>Area designated as Nitrate Vulnerable Zone</p> <p>Number of water pollution incidents, category 1 &amp; 2</p> <p>Water quality measures in local/county plans</p> <p>Use of conditions/regulations with planning permissions</p>

<p>Protect the water resource &amp; ensure its sustainable use</p>	<p><b>Water companies/NRW/EPA</b> monitor abstraction and discharges of water; losses. Flood risk databases.</p>	<p>Water abstracted (licensed)</p> <p>Water abstracted (unlicensed)</p> <p>Agricultural discharge to water courses</p> <p>Number and cost of flooding incidents</p>
<p>Guard against land contamination, encourage reuse of existing buildings &amp; of previously developed land of low ecological quality</p>	<p><b>Local planning authorities</b> monitor land availability including 'brownfield land' and maintain databases</p>	<p>Amount of brownfield land remediated/developed</p> <p>Buildings recycled</p> <p>Policies/targets in local/county development plans</p>

<p>Minimise the requirement for energy generation, promote efficient energy use &amp; increase the use of energy from renewable resources</p>	<p><b>Department of Communications, Energy and Natural Resources</b> is responsible for implementing measures to increase penetration of renewable energy technologies and holds data</p> <p><b>Local planning authorities</b> permit renewables schemes and hold data on permissions, conditions, etc</p> <p><b>UK Department of Energy and Climate Change</b> provides statistics</p>	<p>Additional capacity of renewable energy production</p> <p>Number of energy users connected to smart grids</p> <p>Number of households with improved energy consumption classification</p> <p>Decrease of primary energy consumption of public buildings</p> <p>Energy saved</p> <p>Number of micro-generation schemes established</p>
<p>Minimise waste/ increase re-use, recycling &amp; recovery rates</p>	<p><b>Local authorities</b> monitor municipal waste including recycled waste</p>	<p>Waste arisings by sector</p> <p>Waste arisings by disposal</p> <p>Domestic waste arisings</p> <p>Waste recycled or composted</p>

<p>Minimise the need to travel; provide alternatives to car use</p>	<p><b>Local authorities</b> develop policies and monitor use of public transport.</p> <p>Organisations such as the <b>Urban Institute Ireland</b> and academic partners such as <b>NUI Maynooth</b> carry out studies and monitoring</p> <p>In the UK, the <b>National Travel Survey</b> and the <b>Department for Transport</b> provide data</p> <p><b>Welsh Government Economy and Business</b> promotes broadband access and holds statistics</p>	<p>Availability of public transport (bus and rail) - national, regional, local</p> <p>National Park/county, local buses; taxis; community schemes</p> <p>Promotion of public transport associated with tourism</p> <p>Additional households/businesses with broadband access at least 30 Mbps</p>
---	--	---

Maintain and improve the human environment	Objective	Monitoring bodies	Indicators (examples)
	Limit/adapt to climate change	<p>A wide range of institutions carry data, including <b>Centre for Ecology and Hydrology</b>; <b>National Soil Resources Institute</b>; <b>Countryside Survey</b>.</p> <p><b>Teagasc</b> researches the Irish agricultural sector and holds data on soils and emissions</p> <p><b>Forestry Commission/Service</b> maintain soil databases for planting.</p> <p><b>EPA</b> monitors greenhouse gas emissions</p> <p><b>Local planning authorities</b> promote climate change adaptation in planning</p>	<p>Change in soil organic carbon, acidity, nitrogen, biology</p> <p>Water capture</p> <p>Changes in area of grassland and woodland</p> <p>CH<sub>4</sub> emissions</p> <p>Number of micro-generation schemes established</p> <p>Change in ecological footprint</p> <p>Estimated decrease in GHG</p>
Protect/improve air quality	<p><b>NRW/EPA</b> and <b>local authorities</b> issue permits and monitor air quality; maintain databases</p>	<p>Change in ammonia, CH<sub>4</sub>, N<sub>2</sub>O, ozone</p> <p>Air quality incidents</p> <p>Radon remediation programmes</p> <p>Percentage of sensitive habitat area exceeding critical loads for acidification and eutrophication</p>	

<p>Improve physical &amp; mental health; reduce health inequalities</p>	<p>The <b>Public Health Observatory</b> monitors health and wellbeing issues and maintains databases</p> <p><b>Welsh Health Survey</b> provides data</p> <p><b>Health Information and Quality Authority</b> monitors health information</p> <p><b>Dark Sky Discovery, NRW and NPWS</b> promote tranquil areas and dark skies</p>	<p>Change in number and extent of tranquil areas</p> <p>Percentage of dark sky at night by area</p> <p>Access to services e.g. GP, hospital, broadband</p> <p>Increase in employment</p> <p>Decrease in poverty</p>
<p>Improve public access to land</p>	<p><b>National parks, AONBs and local authorities</b> monitor visitor statistics; <b>Visit Wales</b> and <b>Regional Tourism forums</b> maintain records</p> <p><b>Fáilte Ireland</b> promotes tourism including access</p> <p><b>NRW/NPWS</b> hold databases on open access</p>	<p>Hectares of Open Country and Common Land</p> <p>Length and condition of PROWs and cycleways</p> <p>Amount and condition of accessible land in agri-environment schemes</p>

Protect the marine environment	Objective	Monitoring bodies	Indicators (examples)
	<p>Protect seabed features so that they can support the processes, habitats &amp; species characteristic of the marine landscapes</p>	<p>In Ireland, <b>Marine Institute</b> is the national agency responsible for marine research, technology, development and Innovation in the Republic of Ireland</p> <p><b>Coastal and Marine Resources Centre (CMRC), University College Cork</b>, seeks to make a significant contribution to the scientific understanding of coastal and marine environments and their management</p> <p>In Wales, <b>NRW</b> monitors the marine environment in Welsh waters</p> <p><b>CEH Bangor</b> carries out research and holds data, as does the <b>Centre for Catchment and Coastal Research</b></p> <p>The respective government departments (<b>Department of Agriculture, Food and the Marine</b> and <b>Department for Environment, Food and Rural Affairs</b>) are responsible for the state of the marine environment</p>	<p>Concentrations of hazardous substances compared to Environmental Quality Standards (EQSs)</p> <p>Hazardous substances in marine organisms</p> <p>Plastic particles in stomachs of seabirds</p> <p>Organochlorine/mercury concentrations in seabird eggs/feathers</p> <p>Hazardous substances in coastal waters</p> <p>Chlorophyll-a in transitional, coastal &amp; marine waters</p> <p>Bathing Water quality</p>

	Protect water column features so that they can support the characteristic processes, habitats & species	As above	
	Protect the water quality of the component water column features so they can support the processes, habitats & species characteristic of the water column & associated seabed habitats	As above	

	Maintain biota quality	As above	<p>Number, abundance, diversity and evenness of taxa distribution</p> <p>Percentage of overfished stocks of commercial importance</p> <p>Fish catches by major species and area</p> <p>Accidental by-catch: birds, mammals and turtles</p> <p>Changes in proportion of large fish and hence the average weight and average maximum length of the fish community</p> <p>Aquaculture impact on genetic structure of wild fish populations</p> <p>Seabird population trends</p>
--	------------------------	----------	--

8.1.5 It is not possible to monitor everything. Environmental indicators are a 'proxy' of the state of the environment, and where carefully selected will provide a picture of its condition. It is critical that indicators are sufficient in number to be comprehensive, but do not duplicate unnecessarily. It is important when aggregating data to higher levels, to ensure that critical factors are not lost, such as cumulative effects over periods of time that in themselves are not significant. It is also critical to capture *quality* as much as quantity. Simply quantifying the number of schemes entered into, or the amount of fencing or planting, does not in itself confirm that there has been an increase in quality environments.

The indicators above are not exhaustive, but have been selected to reflect the objectives, and aim to be sufficient enough to be reasonably attributable to the proposed programme.
