RPW official 2

Apologies – thought I knew what I was doing with these cross-compliance breaches but I think I, and some of my colleagues, could do with an update and some training in relation to applying the breach severities. Maybe we could organise a brief Teams training session – not urgent but maybe something to consider?

Yes having read this the damage should be Medium.

Please see the 2020 verifiable standards, I take it the breach you want to apply is 7.8 in the GAEC 7: Maintenance of Landscape Features section. You have applied a low severity which indicates that no damage has been caused but your report says that damage has been caused – should the severity be medium or high?
Thanks

Importance: High

RPW official 2

Had another revision of this based on RPW comments. Have divided it into 3 breaches – first one is the most serious. I have combined the 2 elements as they are interconnected

The others 2 breaches I do not think we need to take action on other than to remind him that if they happen again in the future then we will be taking them more seriously and view them as intentional.

Have a look and see if I have got it right and if I need to revise further let me know.
