Aberystwyth SY23 3UR

Distribution:

Incident No: W /23/05

Date of contact: 06 March 2023

Purpose of contact: Text message and answer phone message from [REDACTED]

Details: For the record, testing of fox carcass should include PCB, furans, fluoranthene, naphthalene, toluene and full range of phenol derivatives.
Testing merely for phosphates would be clear official misfeasance if not malfeasance and will be held to full account.
Full list of chemicals is in 2016 site report held by Caerphilly council. I think it was an Arcadis report but can give you full reference tomorrow.
[REDACTED] reports benzene was reported previously as above AL.

Adviser: [REDACTED]
Plant Health and Environmental
Protection Branch (PHEPB),
Welsh Government

Date of report: 07 March 2023
