Hi Both

This is just a public notification that the development is being proposed. It gives an indication of the number of turbines but not any certainty and provides two different access routes. As such there is insufficient information for us to provide detailed information. If it felt that we need to response, I suggest that we say that we can't provide detailed response at this time: However, if they wish to discuss the scope of the historic environment section of the EIA before they submit it to PEDW we would be available.

Best wishes
