

HOUSING

In addition to providing, since 1981, an annual volume of Welsh housing statistics, the Welsh Office has produced over the years a number of reports on housing. These include occasional surveys of the condition of the Welsh housing stock, as well as projections of households. They have been supplemented by reports and surveys undertaken or commissioned by such other bodies as Tai Cymru (Housing for Wales, the equivalent of the Housing Corporation in England) and the Joseph Rowntree Foundation. In addition, the census volumes continue to provide information on housing and households. Against all this it may seem surprising that the number of tables in this section is not greater than the thirteen offered. One reason is that many of the reports and surveys are addressing a particular situation at a particular time: often their strength is in their detail which lends itself less readily to the tracking of trends which has been the main concern of this volume. More specifically a decision was taken to concentrate on a few issues on housing which were both of central importance and where the long-run tendencies could be statistically indicated. Given the large influence of housing on overall economic activity, the economic aspects of housing were an obvious candidate: the other major topics selected were: the ownership and age of the housing stock; the social aspects of housing and housing policy; and the composition of households together with their possession of various household amenities.

These are not water-tight compartments: indeed, most of the tables are relevant to more than one category. The series on the number of new dwellings started and completed (Table 11.1) obviously serves as a crucial economic indicator: but in showing also the dramatic reversal of the relevant contributions of local authority and housing association activity it also casts light on political and social shifts. The similar series at a county level (Tables 11.2 and 11.3) demonstrates not only the locational variations within counties, but also the way

in which the balance between private and public also varied between counties and over time. Tables 11.4, 11.5 and 11.6 shift the emphasis from the flow of building to the overall existing stock, giving breakdown respectively by type of ownership (tenure) and by the age of the houses. The notes to Table 11.4 need to be read carefully because, unlike the two earlier tables, it involves a degree of estimation for the inter-censal years although the detailed information for the actual census years (1981,1991) provides a firm anchorage for the series as a whole. There had always been some selling of local authority dwellings but Table 11.7 indicates the huge leap upwards in this practice in the early 1980s and also shows its explicit connection with the right to buy legislation.

Public contributions towards the maintenance and improvement of the privately owned housing stock (Tables 11.8 and 11.9) obviously involves some difficult problems of categorisation, but the interesting shifts in both the number and the distribution of such grants are too definite for such marginal considerations to cast serious doubt on their reliability. There is perhaps a greater degree of estimation in the series (Tables 11.10 and 11.11) dealing with rent rebates and housing benefits. This was largely unavoidable given the complexity of the definitions and administrative arrangements of providing rebates or benefits to meet housing costs, operating means tests, having schemes applying to both public and private tenants, and - above all - the frequent adjustments to the rules and regulations to accommodate policy shifts in both housing provision and local government finances. But, as the notes indicate, the estimates are based on a great deal of knowledge and experience: it is reasonable to be cautious about attaching too much reliance on the precision of any particular figure; but the overall picture presented is solidly based. Rather more care is needed in the interpretation of the series on mortgages and selling prices (Tables 11.13 and 11.14). This critical indicator of both a major determinant of housing activity and of its social impact

necessarily involves three large elements of uncertainty: the possible variation in the quality and reliability of the information provided by a range of building societies; the practical necessity of relying on a five per cent sample survey; and the need largely to deal in averages in an area where it is often the variations which are most illuminating. Towards the end of the period there was the added complication that government policies were leading to a shift in the range and balance of the institutions involved in mortgaging activities as banks took on building society functions, and building societies converted themselves into banks. But, as a subjective judgement, it is not considered that over the years covered here there was any major distorting effect.

The information relating to households (Tables 11.15 to 11.21) returns to much firmer ground. The first six tables are drawn directly from the material derived from the statutory population censuses and are restricted to the information provided for these years. Changes in the broad structure and status of households together with their access to basic amenities are not aspects which vary greatly from year to year: information which is solidly-grounded for particular years at regular intervals provide a sufficient guide to the overall trends. The information on access to specific durable goods (refrigerators, washing machines etc.) is unavoidably weaker for two reasons: it is drawn from the annual family expenditure surveys based on the voluntary co-operation of a number of private households; and the number of sampled families living in Wales is quite small.

- (a) Under Housing Act 1974 and Housing Act 1985.
 (b) Improvement and conversion grants for major improvements and associated repairs and replacements and other works of improvement.
 (c) Intermediate grants for the installation of missing standard amenities plus associated repairs and replacements. Special grants for the installation of standard amenities and means of escape from fire in Houses in Multiple Occupation and for associated repairs and replacements.
 (d) Repair grants for substantial and structural repairs to pre-1919 houses or for the replacement of lead plumbing.
 (e) Grant approvals under the 1985 Act ceased on 1 July 1990: from this date approvals were made under the 1989 Act: see Table 11.9
 (f) Amount paid on completed grants only. Included the total payment for any grants which were completed during a year, and thus includes instalments actually paid in earlier years on those grants.

- (a) The Housing Finance Act 1972 required every housing authority to bring into operation by October of that year a scheme for granting rent rebates to persons occupying council dwellings. Under the Act, Exchequer subsidy was payable to local authorities on a reducing scale: after 1975-76 central government contributions amounted to 90 per cent of the amounts paid by local authorities. The cost of administering the rent rebate system was met by the local authorities. In 1981-82 the total amount paid by local authorities in Wales to some 75,000 council tenants totalled £25 million, a weekly average of about £6 per tenant. These schemes were replaced by Housing Benefit in April 1993: see Table 11.11.
- (b) Includes tenants receiving rebates/allowances directly from Department of Health and Social Security up to and including 1980-81.
- (c) The 1972 Act also provided Exchequer support, a subsidy of 100 per cent for the standard amount of rent allowances paid to private tenants but with the local authorities bearing the cost of administering the scheme.

- (a) Housing Benefit was introduced in April 1983 and is awarded on a means related basis by housing and rating authorities. It is designed to provide assistance with rent and, prior to 1 April 1990, rates payable in respect of residential accommodation. There were three categories of Housing Benefit in England and Wales prior to the introduction of community charge on 1 April 1990 which rendered the rate rebate element redundant:
- Rent rebate - provides assistance with rent paid by housing authority tenants.
- Rent allowance - provides assistance with rent paid by people who are not housing authority tenants.
- Rate rebate - provided assistance with rates (irrespective of whether rates were paid direct to the rating authority or as part of rent).
- The housing benefit system was revised in April 1988 to bring it in line with the income support system (which replaced supplementary benefit). Before April 1988, there were two types of housing benefit cases: certified cases where the householder had applied to the Department of Social Security (DSS) for supplementary benefit, in which case the DSS notified the local authority of the case; and standard cases where the householder applied directly to the local authority for benefit. The entitlement to housing benefit was up to 100 per cent of the rent/rates bill, depending on the means of the applicant. Since April 1988, the maximum rebate payable under housing benefit is 100 per cent of the rent bill total and was 80 per cent of the rates bill. Cases are now distinguished by whether or not the applicant is entitled to income support.
- (b) Local authority estimates of average number of recipients during the year for the years prior to 1988-89. From 1988-89 estimates by Department of Social Security are based on caseload information at the end of the months May and August.
- (c) Data for the years 1983-84 to 1987-88 are the amounts paid to local authorities and new towns. These are not directly comparable with the amounts granted to recipients. The data from 1988-89 onwards are not available in the same terms as earlier years. The amounts shown represent the authorities actual expenditure as benefit granted to claimants.
- (d) From 1 April 1983 (under the housing benefit scheme) all persons eligible for rate rebates, including those receiving supplementary benefit have been paid by local authorities. In previous years recipients of supplementary benefit received rate rebates directly from Department of Health and Social Security. Figures for earlier years (Table 11.9) are therefore not directly comparable with those under the housing benefit scheme. Rate rebates were replaced first by Community Charge Benefit in April 1990 and then by Council Tax Benefit in April 1993.

Source: Family Expenditure Survey

- (a) The information is derived from the Family Expenditure Surveys, which use a voluntary sample of private households. To minimise the errors of using a small sample (around 3-400 a year for Wales) the figures are (except for 1992 onwards) based on an average of two years. For these reasons minor year to year variations are less reliable than the overall trends. Information on additional consumer durable goods tends only to be slowly picked up and are sometimes already significant when first recorded (e.g. Video recorders and freezers). For some items information is only available for the end of the period:

	Tumble Dryer	Microwave	Dish washer	CD Player
1993	49.1	62.9	12.1	34.2
1994/95	43.1	68.3	11.9	35.7

An alternative market research source provides the following:

	Tumble Dryer	Microwave	Video Recorder	CD Player	Video Camera /camcorder
1987	..	36	51	9	..
1988	..	48	60	11	..
1989	..	57	66	15	..
1990	..	59	71	21	6
1991	11	59	72	22	6
1992	12	68	78	31	8
1993	12	69	80	36	9
1994	12	75	82	41	12
1995	15	78	81	50	15
