

SFR 93/2016

28 July 2016

Participation of young people in education and the labour market (year end 2014 and 2015 (provisional))

This release provides summary information on the learning activities and labour market status of young people (aged 16 to 24) in Wales, based on a number of sources which are outlined later in the release. The release provides the definitive source for estimates of the proportion of young people who are not in education, employment or training (NEET) in Wales. Underlying data are available through [Statswales](http://stats.wales).

The release provides final data for 2014 and provisional estimates for 2015 which use the best data for 2015 currently available for each aspect of participation; this includes some final data, some provisional data and some modelling. Estimates for 2014 take into account final data, which was not available at the time of the provisional figures last year. More detail is outlined in the notes section.

Summary

Provisional estimates for 2015 indicate a fairly steady state overall compared with 2014.

For 16 to 18 year olds:

- 79.5 per cent - in education or training (↓ 80.1 per cent in 2014);
- 33.2 per cent - in full or part-time employment (↑ 31.8 per cent in 2014);
- 10.5 per cent - NEET (↓ 10.8 per cent in 2014).

There was a decrease in the proportion of 16 to 18 year olds in education or training, whilst there was an increase in the proportion in employment. The proportion of those not engaged in education or training *nor* in employment (NEET) saw a slight decrease. Over the long term, participation in education or training has increased to levels around 80 per cent, with employment contracting from 2004 to 2011 but increasing in recent years. The proportion of 16 to 18 year olds who are NEET has historically fluctuated around 10-13 per cent, but has been steady in recent years. (*Tables 1 and 2*)

For 19 to 24 year olds:

- 37.6 per cent - in education or training (↓ 38.2 per cent in 2014);
- 61.2 per cent - in full or part-time employment (↑ 60.3 per cent in 2014);
- 19.0 per cent - NEET (↓ 20.4 per cent in 2014).

Provisional figures for 2015 indicate the proportion in education or training decreased slightly compared to 2014, whilst there was an increase in the proportion in employment. The proportion not engaged in education or training *nor* in employment (NEET) saw a decrease. Since 2004 the proportion of 19-24 year olds in education or training has remained around a similar level (37 to 39 per cent), whilst the proportion who are NEET increased to higher levels, following the start of the 2008 recession, reflecting contracting employment levels. There has however been an increase in employment, and a decrease in the proportion who are NEET in the last 3 successive years. (*Tables 1 and 2*)

Introduction

The release provides policy makers and those working with young people with data to monitor trends in participation and assess the impact of education and labour market interventions on young people.

The release provides the definitive source for estimates of the proportion of young people who are not in education, employment or training (NEET) in Wales. These are used to monitor the Welsh Government's strategic approach to reducing the proportion of young people who are NEET as set out in the *Youth Engagement and Progression Framework* and the *2012-2016 Tackling Poverty Action Plan*. The data also contribute to one of the 46 'National Indicators' (Percentage of people in education, employment or training, measured for different age groups) as laid under the *Well-being of Future Generations Act (2015)* (see notes for further details).

In addition to this release we publish a bulletin [Young people not in education, employment or training \(NEET\)](#) which provides users with more timely and detailed (but less statistically robust) NEET statistics from the Annual Population Survey.

The release provides information on the learning activities and labour market status of young people (aged 16 to 24) in Wales as at the end of the calendar year. The information is based on population estimates as at the end of the calendar year, education enrolment counts in December for work-based learning, further and higher education and in the following January for schools. For 2015 some of these data are provisional at this stage, and will be updated to final figures in next year's release. For more details see the notes section.

The Annual Population Survey is used to estimate the proportion of who are employed, unemployed or inactive and relates to the whole of the reference year. Due to the use of survey data within the calculations there will be some element of sampling variability in the estimates. As a result changes in trend in economic activity need to be interpreted with a degree of caution, as changes could be attributable to sampling effects as well as real effects. Currently it is not possible to distinguish between these impacts.

The data presented covers 16-18 year olds and 19-24 year olds on an academic age basis (i.e. age as at 31 August prior to the start of the academic year).

Further detail, including cohort numbers underlying tables 1 and 2 of this release are available through

Participation of 16 to 18 year olds in education and the labour market (year end 2014 and 2015 (provisional)) Table 1,

Employment:-

- Approximately 25,300 (23 per cent) of 16 to 18 year olds were estimated to be engaged in some type of education or training *and* in employment in 2015, similar to the position in 2014. Most of these were students in full-time education who were also working part-time.
- In addition, 10,900 (10 per cent) were in full or part-time employment but *not* in education or training in 2015.

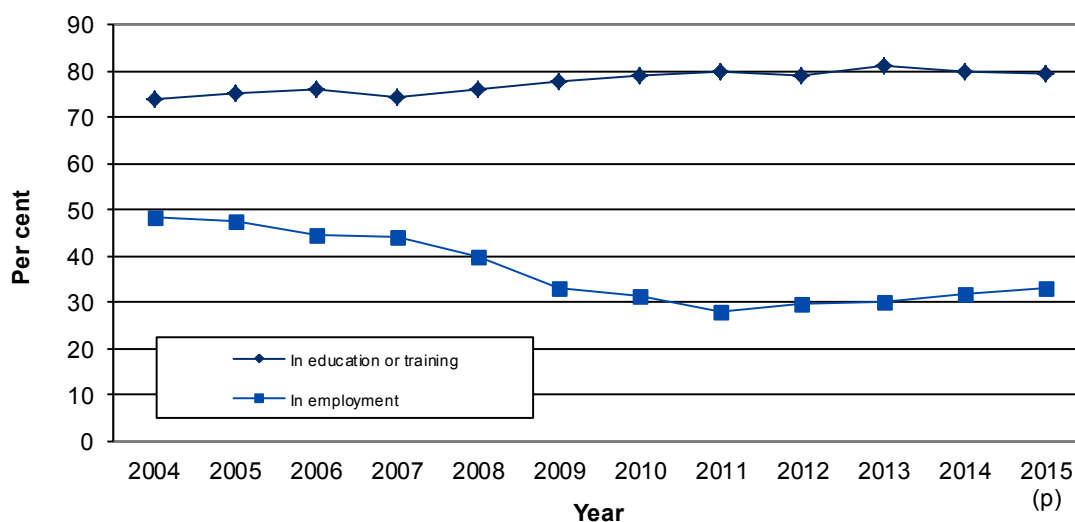

NEET:-

- An estimated 11,500 (11 per cent) were NEET, compared to 12,000 (11 per cent) in 2014. Males were more likely to be NEET than females; 11 per cent compared with 10 per cent (in 2015).
- The 11,500 16 to 18 year olds estimated to be NEET in 2015 comprised of 5,200 unemployed young people and 6,300 who were economically inactive¹.

Education and training:-

- In total, 79 per cent of 16 to 18 year olds were engaged in some kind of education or training (full or part-time) in 2015 (slightly below the proportion in 2014).
- 69 per cent of 16 to 18 year olds (75,600) were in full-time education in 2015 (a slight increase on the previous year).
- A higher proportion of females aged 16 to 18 were in full-time education - 72 per cent (38,400) compared with 67 per cent (37,200) of males in 2015.
- By single year of age, 82 per cent (28,800) of all 16 year olds were undertaking full-time education in 2015 compared with 72 per cent of 17 year olds and 56 per cent of 18 year olds. Compared with 2014, there was an increase for 16 and 18 year olds, and a decrease for 17 year olds.
- Male participation in training for young people was higher than for females. 7,400 16 to 18 year olds were engaged in training (both work-based learning courses and job-related training) in 2015; approximately 8 per cent of all males in this age group compared with 6 per cent of females.

Chart 1: Participation of 16-18 year olds in education and the labour market (year end 2004 to 2015(provisional))²

¹ Neither employed or seeking and available for work.

² Note young people can be in both education and training and employment.

Chart 1 shows the trends in participation in education or training, and in employment for 16-18 year olds between 2004 and 2015(p). Prior to 2008 the proportion of 16-18 year olds in education and training remained broadly unchanged at 74-76 per cent. Following the start of the recession in 2008, there has been an increase in the proportion of 16-18 year olds in education and training, to levels around 80 per cent. In contrast, the proportion of 16-18 year olds in employment has decreased overall from 2004, with slightly larger reductions between 2007 and 2009, but increasing from 2011 onwards to 33 per cent in 2015.

Participation of 19 to 24 year olds in education and the labour market (year end 2014 and 2015 (provisional)) Table 1,

Employment:-

- Approximately 45,400 (18 per cent) of 19 to 24 year olds were estimated to be engaged in some type of education or training *and* in employment in 2015. Most of these were either students in full-time education who were also working part-time or students in part-time education or training who were also working full-time.
- In addition, 110,200 (43 per cent) were in full or part-time employment but *not* in education or training in 2015.

NEET:-

- An estimated 48,200 (19 per cent) were NEET in 2015 compared with 52,200 (20 per cent) in 2014. Females were more likely to be NEET than males; 22 per cent compared with 16 per cent (in 2015).
- The 48,200 19 to 24 year olds estimated to be NEET in 2015 comprised of 20,500 unemployed young people and 27,800 who were economically inactive⁽²⁾.

Education/training

- In total, 38 per cent of 19 to 24 year olds were engaged in some kind of education or training (full or part-time) in 2015, the same proportion as in 2014.
- 27 per cent of 19 to 24 year olds (67,600) were in full-time education in 2015, compared to 26 per cent the previous year.
- A higher proportion of females aged 19 to 24 were in full-time education – 28 per cent (34,500) compared with 25 per cent (33,100) of males (in 2015).
- 16,500 19 to 24 year olds were engaged in training (both work-based learning courses and job-related training) in 2015; with participation amongst males slightly higher than females (7 per cent and 6 per cent respectively).
- Participation in full-time education decreased with age. 49 per cent (19,600) of all 19 year olds were undertaking full-time education in 2015 compared with 9 per cent (3,800) of 24 year olds.

Chart 2: Participation of 19-24 year olds in education and the labour market (year end 2004 to 2015(provisional))³

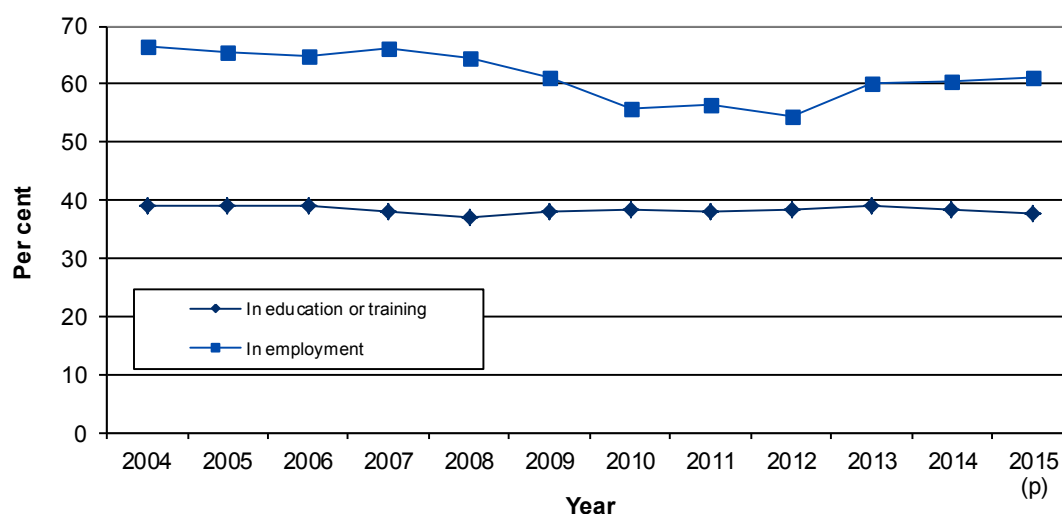

Chart 2 shows the trends in participation in education or training, and in employment for 19-24 year olds between 2004 and 2015(p). It can be seen that the proportion in education or training has remained broadly unchanged over this period at around 37-39 per cent. In contrast, it can be seen that the proportion in employment decreased after the start of the 2008 recession to 2010, however has increased to 61 per cent in 2015 (p).

Chart 3: Participation in full-time education by level of study and age (year end 2010 and 2015 (provisional))

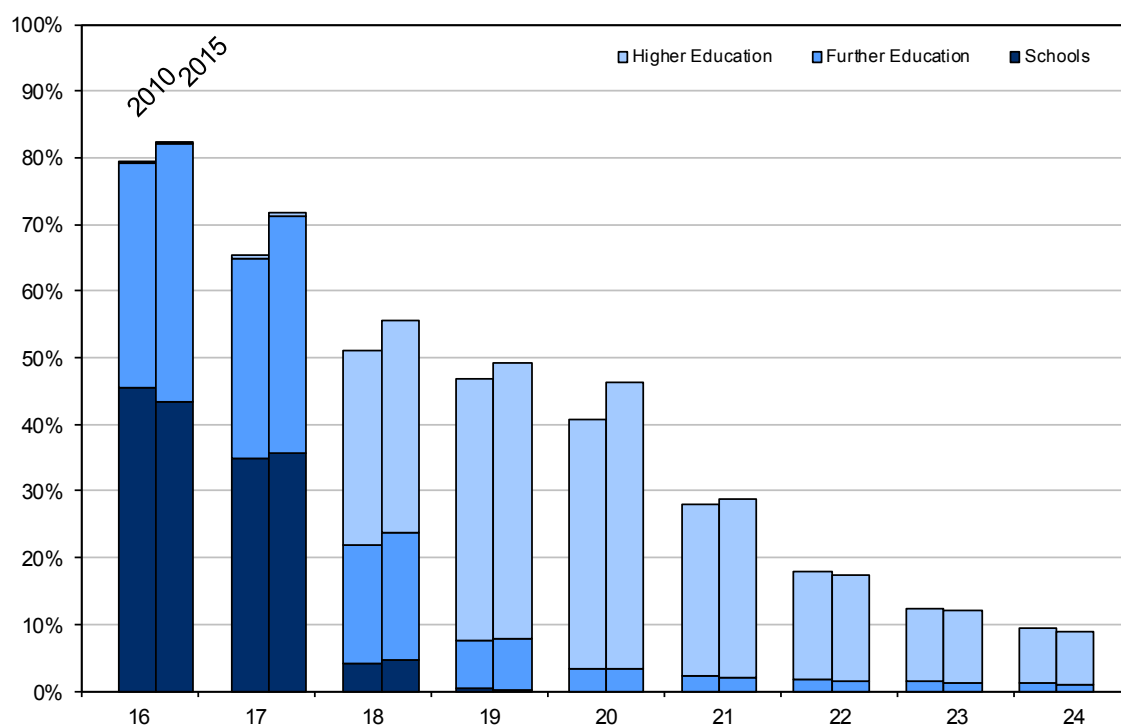

Chart 3 compares participation in full-time education by level of study, in 2015 (provisional) compared with the position in 2010. From the above it can be seen that whilst the participation in full-time education decreases by age, there has been an increase for each single year of age from 16 to 21, and is broadly similar for the older ages.

³ Note young people can be in both education and training and employment.

NOTES

Policy/Operational context

This Release presents the annual snapshot of participation of young people in education and the labour market. The statistics are used within the Welsh Government to monitor trends in the level of participation in education and training, and the proportion of young people who are NEET.

The [Youth Engagement and Progression Framework](#) was announced in January 2013, with an implementation plan published in October 2013. The Framework outlines the Welsh Government's approach to reducing the number of young people aged 11 to 25 who are not engaged in education, employment or training (NEET). The Framework is based on 6 key building blocks of Identifying young people most at risk of disengagement; Better brokerage and co-ordination of support for them; Stronger tracking and transitions of young people through the system; Ensuring provision meets the needs of young people; Strengthening employability skills and opportunities for employment; and Greater accountability for Local Authorities.

The *2012-2016 Tackling Poverty Action Plan* was published in June 2013. It outlines the Welsh Government's commitment to long-term well being through key objectives in Tackling Poverty. As part of the plan, there is a stated intention to substantively reduce the number of people who are not in education, training or employment through refocusing resource as early as possible in identifying the young people who most need support, tracking them through the system until they reach university, Further Education or sustained employment. Such that the target set for 16 to 18 year olds in the *2012-2016 Tackling Poverty Action Plan* is to;

- reduce the proportion of 16 to 18 year olds who are NEET to 9 per cent by 2017.

Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural well-being of Wales. The Act puts in place seven well-being goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators ("national indicators") that must be applied for the purpose of measuring progress towards the achievement of the Well-being goals, and (b) lay a copy of the national indicators before the National Assembly. The 46 national indicators were laid in March 2016 and this release includes information related to one of the national indicators namely "Percentage of people in education, employment or training, measured for different age groups."

Information on indicators and associated technical information - [How do you measure a nation's progress? - National Indicators](#)

Further information on the [Well-being of Future Generations \(Wales\) Act 2015](#).

1. Data Sources

ADMINISTRATIVE DATA SOURCES:-

School pupil numbers:

Information is collected in January each year from the Pupil Level Annual School Census (PLASC). For example, for the provisional year end 2015 estimates, provisional figures from the January 2016 School Census are used. Ages are as at 31 August prior to the start of the academic year. The Census only requests a combined figure for those aged 19 & over - these figures are included for 19 year olds only. Includes all maintained and independent schools.

Any changes to the provisional January 2016 PLASC data will be reflected in the final year end 2015 participation estimates in next year's release.

Higher Education:

Information regarding those at Higher Education Institutions (HEIs) is collected on a United Kingdom basis by the Higher Education Statistics Agency (HESA). This collection includes those studying further education courses at HEIs.

The analysis in this release is as at 1 December. Ages are as at 31 August prior to start of academic year. Prior to 2010 data relate to the total number of enrolments. From 2010, there has been an increase in multiple enrolments attributed to one individual, particularly amongst FE enrolments at HEIs, and therefore such multiple enrolments have been discounted to better reflect the number of individual students.

Provisional year end 2015 estimates are modelled using the Higher Education Students Early Statistics Survey (HESES), collected by the Higher Education Funding Council for Wales (HEFCW), which provides an early indication of the number of HE students studying in the academic year 2015/16. These provisional estimates will be revised with final 2015 HESA data in next year's release.

Information on Open University students are "whole year" figures, i.e. they include enrolments throughout the year. The reference point for age is 1 January. The figures used are for Welsh-domiciled students studying at the OU. Data for the 2015/16 academic year are provisional and will be revised with final data in next year's release.

Further Education and Work-based Learning:

The Welsh Government collects information on enrolments at Further Education Institutions (FEIs) in Wales, including work-based learning (WBL), via the Lifelong Learning Wales Record (LLWR).

The analysis in this release is based on enrolments as at the week of 1 December. The 2015/16 data are still under validation so the provisional year end 2015 estimates are based on an early freeze of the data. Where a learner has activities in more than one provision type allocation to a single type has been made in the order: WBL at FEIs, HE at FEIs, other at FEIs, WBL at Other Training Providers. Learners with both WBL activities at Other Training Providers and learning activities at FEIs will be included under the activity at the FEI. These early estimates will be revised with final data for 2015/16 in next year's release.

FE enrolments include students on courses at the Workers Educational Association (WEA) and the Young Men's Christian Association (YMCA).

NON ADMINISTRATIVE DATA SOURCES:

Population:

The Office for National Statistics (ONS) calculates mid-year estimates of resident population by single year of age as at 30 June. For this release, end of year populations have been derived from the latest mid-year estimates and 2014-based national population projections. These estimates have been adjusted to age as at 31 August. For example age as at 31 August 2015 is used in the provisional figures for year end 2015.

Economic Activity:

Economic activity is estimated from survey data using proportions derived from the Annual Population Survey (APS), which is a household survey carried out by the ONS. The APS combines the boosted samples of the Labour Force Survey (LFS) and provides rolling four quarter data. These latest data cover the calendar year 2015. For Wales, the APS sample is about 20,000 households

Some of the estimates are based on small samples and therefore may have a large margin of error. As a result changes in trend need to be interpreted with a degree of caution, as changes could be attributed to sampling effects as well as real effects. Currently it is not possible to distinguish between these impacts.

Note that the employment status of work-based learners is derived from the LLWR rather than the APS.

2. Definitions

International Labour Organisation Unemployed (ILO):

The ILO measure of unemployment covers people without a job who are available to start work within two weeks and had either looked for work in the four weeks prior to interview, or were waiting to start a job they had already obtained.

Economically inactive:

The economically inactive consist of those people who are neither in employment, nor classified as unemployed on the ILO definition. Such people are classified according to whether or not they would like a regular paid job and, if so whether or not they were seeking work and/or available.

3. Calculation of the participation of young people in education and the labour market

The APS is used to estimate the following proportions:

- Labour market status of those in full-time education;
- Labour market status of those in part-time education;
- Full-time and part-time employment of those in work-based learning, who are employed;
- Employer sponsored 'off-the-job' training for those in employment.

The LLWR is used to estimate the following proportion:

- Labour market status of those engaged in work-based learning.

These proportions are then applied to the numbers known to be in education, work-based learning and the total population to derive estimates of participation by education and employment. For work-based learners, the labour market status at the start of the learning programme collected via the LLWR is used with the addition of some APS data to estimate the proportions in full-time and part-time employment.

Table A1 in Annex A provides further detail on the methodology used to estimate participation by education and economic activity.

4. Revisions policy

Provisional 2015 figures will be finalised in next year's publication, due for release in July 2017. The following table shows the difference between the 2014 provisional estimates published in last year's release and the final published estimate for the key series of the proportion who are NEET, and the proportion in education or training.

	NEET		In education or training	
	Number	Per cent	Number	Per cent
16 to 18				
Provisional 2014	12,200	10.9	89,100	79.8
Final 2014	12,000	10.8	89,200	80.1
<i>Difference</i>	<i>-200</i>	<i>-0.1</i>	<i>100</i>	<i>0.3</i>
19 to 24				
Provisional 2014	53,700	20.7	96,500	37.3
Final 2014	52,200	20.4	97,500	38.2
<i>Difference</i>	<i>-1,500</i>	<i>-0.3</i>	<i>1,000</i>	<i>0.9</i>

For earlier years this series is not revised on a regular basis. Revisions are only be made in line with revisions to source data. Annual Population Survey data back to 2012 has recently been reweighted, and the series has been updated with these new data. The reweighted data has made no change to headline estimates of NEET or participation within this release, but do affect underlying Statswales data.

Key quality information

National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Sampling variability

As noted above the economic status proportions are estimated from the Annual Population Survey. Therefore, these estimates will be subject to variation due to sampling error and also non-sampling error and should be treated with caution. As a result changes in trend need to be interpreted with a degree of caution, as changes could be attributed to sampling effects as well as real effects. Currently it is not possible to distinguish between these impacts.

Comparisons with previous years

There were changes made in the data sources and methodology used to derive the participation estimates introduced for the year end 2004 edition. Care should be taken when comparing these estimates with estimates from year end 2004 onwards. Please contact us for advice before using comparisons with previous years.

In particular the following changes need to be taken into account when making comparisons with previous years:

Further Education and Work-based Learning:

The LLWR replaced the Individualised Student Record (ISR) from the start of the academic year 2004/05, therefore a discontinuity may result from the change in data collection.

Prior to the academic year 2004/05 work-based learning activity was collected via the National Trainee Database (NTD). The NTD included college based WBL trainees, who were also included in the number of FE enrolments. This double counting has been removed with the collection of WBL activity via LLWR

by the introduction of a unique identifier that is common to the learner no matter where their activity takes place.

Economic Activity:

For 2001 - 2003 economic activity was based on the Welsh Local Labour Force Surveys (WLLFS), with a similar sample size to the APS. Prior to 2001/02, economic activity was estimated using the Labour Force Survey (LFS).

Changes in population estimates

The Office for National Statistics (ONS) calculates mid-year estimates of resident population by single year of age as at 30 June. For this release, end of year populations have been derived from the mid-year estimates and 2014-based national population projections. These estimates have been adjusted to age as at 31 August. Population estimates and projections are subject to revision as more accurate information becomes available. Such revisions to underlying population figures impact the published participation and NEET rates are revised.

Comparisons with other estimates

For this release, participation in education and the labour market has been estimated using population, education and work-based learning data along with the Annual Population Survey (APS) to estimate the labour market status. In addition to this release we publish a bulletin [*Young people not in education, employment or training \(NEET\)*](#) to provide users with more timely and detailed (but less statistically robust) NEET statistics based on the APS only, and estimates from the Careers Wales pupil destinations survey.

National Statistics status

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the UK Statistics Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is Welsh Government's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.
