# Area Analysis of Child Deprivation 2014 (WIMD Indicators 2014)<sup>1</sup>

This Statistical Article provides an Area Analysis of Child Deprivation in Wales, using some of the indicators underlying the Welsh Index of Multiple Deprivation (WIMD) 2014. It provides summary maps and analysis for 6 different indicators for Lower Super Output Areas (LSOAs). The indicators cover the WIMD domains of: Income, Health, Education and Housing, and are described in the table below. There is also some distributional analysis of how the child population is spread across areas with differing deprivation according to WIMD, and for each of the Community Safety, Access to Services, and Physical Environment domains.

# **Table of Indicators**

vstadeaau

WIMD Domain	Indicator description summary	Child cohort	Source and reference period
Income	Children in households in receipt of income related benefits or tax credits	Children aged 0-18	Department for Work and Pensions (Ave of Nov 2012, and Feb, May and Aug 2013); Her Majesty's Revenue and Customs (as at 31st Aug 2012); Home Office (as at 1st Sept 2014); and Mid-2012 Small Area Population Estimates
Health	Limiting Long-Term Illness	Children aged 0-18	2011 Census
Health	Low Birth Weight	Single live births	Birth registrations, ten year average 2004-2013
Education	Key Stage 4 Level 2 Inclusive	15 year olds	Pupil Level Annual School Census and Welsh Examinations Database, three year average 2010/11 - 2012/13
Education	Repeat Absenteeism	Pupils of statutory school age (primary and secondary pupils)	Pupil Level Annual School Census, three year average 2010/11 - 2012/13
Housing	Overcrowded Households	Children aged 0-18	2011 Census

<sup>&</sup>lt;sup>1</sup> Notes on the use of statistical articles can be found in section 11 at the end of this document.

#### 1. Background

This Article provides a picture of child deprivation for small areas across a small set of key indicators, both relative to other areas, and also showing actual levels such as rates of children reporting Limiting Long-Term Illness. Its possible uses include area profiling and resource allocation, as well as providing a general picture of how deprivation levels of children vary across Wales and between the different indicators. It is intended as the first in a series of Articles accompanying the annual Indicator data, and we welcome feedback on topics to cover, content and format of the Articles.

Alongside the Article we have published new data on <u>StatsWales</u> for a range of age groups (including some finer detail for children e.g. ages 0-4) and also other indicators such as rates of unemployment-related benefit claimants, and people with no qualifications.

We have also published a <u>guidance article</u> for users of WIMD Indicator data, which provides a guide to what indicator data has been published, how to access it, "do's and don'ts" for analysis, how well indicator data can be combined for comparisons overtime and links to existing analysis.

This package of outputs replaces plans to update the Child Index with information and analysis which will be more useful and relevant to users. These new outputs will support analysis of deprivation of children (and other age groups), allowing some analysis over time, comparisons between areas beyond a simple ranking, and potential future addition of other useful indicators not included in the main Index. Previous WIMD Child Indices have been cut-down versions of the full Index, including selected indicators which are relevant to children. They did not necessarily include the best available indicators of child deprivation. Responses to our overall WIMD 2014 consultation showed only limited use of the previous Child Indices, and the majority of respondents agreed with prioritising analysis of the WIMD indicator data.

This analysis relies on administrative data and Census data. At a small area level and for specific age groups numbers can be low, which can lead to rates showing large fluctuations given relatively small changes in the underlying population. Some sections of this Article include counts of children (rather than indicator rates) as contextual information, and whilst the counts are not in general published on StatsWales, we have provided links to further information where possible. However these "indicator counts" may also be small and in some cases suppressed due to the potential for disclosure. Care should therefore be taken in interpreting the data.

In each section, references to "deprived children" normally relate to the specific indicator the section focuses on. For example, in terms of the Key stage 4 level 2 inclusive indicator, "deprived children" signifies those not attaining that threshold of attainment. Otherwise the reference will specify the deprivation measure being used e.g. "deprived children according to overall WIMD 2014".

#### 2. Summary

### 2.1 Child deprivation for Wales as a whole

- Children are more likely to live in households in income deprivation (27 per cent) compared to the overall population (17 per cent).
- Children had lower levels of limiting long term illness (4,615 per 100,000) compared to the overall population (22,715 per 100,000).
- The percentage of babies born with a low birth weight was 5.6 per cent.
- The percentage of 15 year olds achieving the Key Stage 4 level 2 inclusive indicator was 51.8 per cent.
- The percentage of repeat absenteeism for school aged children was 9.9 per cent.
- Children are more likely to live in overcrowded households (9.2 per cent) than the overall population (5.5 per cent).

# 2.2 Distribution of children across deprived areas

- As would be expected, there is a relationship between overall WIMD 2014 deprivation and the deprivation distribution of children for all the indicators within the article. This relationship is strongest for the income deprivation indicator, followed by the two education-related indicators.
- However for each of the six indicators for children, at least one area in the least deprived 50% according to WIMD 2014 showed relatively high deprivation against that child indicator. That is, some areas in the least deprived half overall still had relatively high rates of deprived children in terms of income, education, health or overcrowded households.
- The indicator with the strongest geographical concentration of child deprivation was the income deprivation indicator (25.7 per cent of income deprived children are concentrated in the 10% most deprived LSOAs), followed by the overcrowded households indicator (22.2 per cent of children in overcrowded households are concentrated in the 10% most deprived LSOAs).
- Using population estimates for small areas we can examine the share of all children living in the most deprived areas in Wales. Using the overall WIMD 2014 ranks, 12 per cent of children live in the top 10% most deprived areas. Equivalent shares were 10.6 per cent for the community safety domain, and 11.1 per cent for the physical environment domain.
- Similar analysis for the access to services domain shows a slightly lower concentration of children living in the most deprived 10% of LSOAs than would be expected if spread equally between LSOAs (9.3 per cent).

# 2.3 Analysis of most deprived Local Authorities

- Cardiff, Blaenau Gwent and Merthyr Tydfil had the highest or second highest proportions of their LSOAs within the 10% most deprived LSOAs for 3 of the 6 indicators each. For Rhondda Cynon Taf the same was true for 2 of the 6 indicators.
- Neath Port Talbot and Bridgend stand out as having the first and second highest proportions of their LSOAs within the 10% most deprived LSOAs for limiting long-term illness, respectively.

- Powys had no LSOAs in the 10% most deprived for 3 of the 6 indicators, and Monmouthshire for 2 of the 6 indicators.
- Although Cardiff had a large proportion of its LSOAs within the 10% most deprived LSOAs for multiple indicators, it showed the most dispersed pattern of deprivation. That is, the rates for its middle half of LSOAs (the Inter-Quartile range) are spread across a relatively wide range for multiple indicators. This was also the case to a lesser extent in many indicators for other major urban areas (e.g. Swansea, Newport and Wrexham).
- Blaenau Gwent had its middle half of LSOAs spread across the narrowest range of values for multiple indicators (3 of the 6), suggesting a condensed pattern of deprivation. The Local Authorities with the narrowest range of values for the other indicators tended to fall within more rural authorities (e.g. Gwynedd and Powys in particular), suggesting less variation in deprivation patterns.

# 2.4 Analysis of most deprived LSOAs

In general, when mapped the indicators for children show broadly similar patterns of deprivation as the overall WIMD 2014, with pockets of high deprivation in the South Wales valleys and large cities, and in some north Wales coastal towns. The two health-related indicators and the overcrowded households indicator tend to show more areas in mid and West Wales in the more deprived groups than the other three indicators (income deprivation and the two education-related indicators).

The following points focus on the top 10 most deprived LSOAs for each of the six child deprivation indicators included in this Article.

- Cardiff has at least 1 of its LSOAs in the top 10 most deprived LSOAs for each indicator. Within Cardiff the Cathays area appears in 4 of the 6 indicators' top 10 lists, and specifically the LSOAs Cathays 5, 6 and 9 each appear in 2 indicators' top 10 lists.
- Rhondda Cynon Taf, Blaenau Gwent, Bridgend and Newport all have LSOAs in the top 10 most deprived LSOAs for multiple indicators and each have at least 1 LSOA appearing repeatedly (at least twice) for these indicators.
- Over a third (8 of the 22) of Local Authorities had no LSOAs appear in the top 10 most deprived LSOAs for any indicator in this article. These were Gwynedd, Flintshire, Powys, Ceredigion, Carmarthenshire, Torfaen, Merthyr Tydfil and Monmouthshire.
- The Cardiff Local Authority has 9 of the 10 most deprived LSOAs for child overcrowding, with three neighbouring LSOAs in Butetown and four other neighbouring LSOAs (Cathays 9, Cathays 6, Cathays 7 and Plasnewydd 4).
- The Neath Port Talbot Local Authority has 5 of the 10 most deprived LSOAs for limiting long term illness, two of which are neighbouring LSOAs (Sandfields West 4 and Sandfields East 2).
- Castle 2 North in Swansea was the most deprived LSOA for repeat absenteeism, yet it was among the least deprived of all LSOAs for limiting long-term illness. However this LSOA did contain a small population of children, and provides an illustration of how small numbers may produce unreliable results.

#### 3. Income deprivation indicator

The income deprivation indicator is a composite indicator which measures three elements: households with 1) Income-Related Benefit claimants, 2) Tax Credit recipients and 3) Supported Asylum Seekers and the definition is described in further detail below in section 3.5.

### 3.1 Key results

- Children have a higher rate of income deprivation, 27 per cent (which amounted to 177,580 children in households in income deprivation) compared to the overall population, 17 per cent (which amounted to 525,300 individuals in households in income deprivation).
- Rates for the middle half (the Inter-Quartile Range) of LSOAs across Wales range from 13 to 35 per cent for this indicator. Powys had the most condensed middle half of LSOA ranges (11-20.5 per cent) compared to Newport which was the most dispersed (12-44.5 per cent), closely followed by Cardiff (11-42.8 per cent).
- The child income deprivation indicator follows a similar pattern to that of the overall population in the income domain of WIMD 2014.
- In the child income deprivation indicator there were pockets of high deprivation in the south Wales valleys and large cities, and in some north Wales coastal towns.
- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for this indicator was Cardiff (20.1 per cent) followed by Blaenau Gwent (19.1 per cent). Powys had no LSOAs in the most deprived 10% and only 17.7 per cent in the most deprived 50% in Wales. These Local Authorities had similar equivalent proportions for the overall population in the income domain of WIMD 2014.
- For the child income deprivation indicator, the most deprived LSOA in Wales was Rhyl West 2, in Denbighshire.
- 25.7 per cent of children in income deprivation are found in the most deprived 10% of small areas for this indicator. This compares to the equivalent figure of 21.7 per cent of all people in income deprivation.
- Around half of children in income deprivation are concentrated in the most deprived 25.6 per cent of LSOAs for this indicator.

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Income Deprivation Indicator, Percentage

### 3.2 Children in households in income deprivation indicator, LSOA analysis

Table 3.1 below shows the top ten most deprived small areas (LSOAs) for income deprivation of those aged 0-18 (percentage). Care should be taken in interpreting these rates as definitive measures of child poverty levels in any given area, and users should note the quality information provided in section 3.5 and footnotes <sup>1</sup>.

- The LSOA with the highest percentage of children living in households in income deprivation was Rhyl West 2 in Denbighshire, with 99 per cent<sup>2</sup> of children in households in income deprivation. The neighbouring LSOA of Rhyl West 3 had the second highest percentage.
- The remaining eight of the ten most deprived LSOAs are found within the south Wales valleys and large cities.
- Four of the ten most deprived LSOAs are found within the Rhondda Cynon Taf Local Authority.

# Table 3.1: Top ten most deprived LSOAs for children in households in income deprivation

LSOA	Local Authority	LSOA Name	Percentage	Indicator count
W01000240	Denbighshire	Rhyl West 2	99	280
W01000241	Denbighshire	Rhyl West 3	81	315
W01000991	Bridgend	Caerau (Bridgend) 1	77	210
W01001209	Rhondda Cynon Taf	Penrhiwceiber 1	74	310
W01000886	Neath Port Talbot	Aberavon 4	72	240
W01001607	Newport	Alway 2	71	365
W01001274	Rhondda Cynon Taf	Tylorstown 1	70	290
W01001144	Rhondda Cynon Taf	Abercynon 2	69	300
W01001222	Rhondda Cynon Taf	Pen-y-waun 2	69	315
W01001874	Cardiff	Splott 6	68	240

Full data set with further age breakdowns is available on <u>StatsWales</u>.

#### 3.3 Distribution of the children in households in income deprivation indicator

The plot overleaf shows the child income deprivation indicator ranks of LSOAs (light blue line) and the WIMD 2014 income domain LSOA ranks for all people (dark blue line) against the percentage of those in income deprivation.

<sup>1</sup> Some LSOAs may contain small populations of children, which may lead to unreliable results for the indicator in that LSOA. Mid-2012 population estimates were used as the denominator for this indicator, and are published by the ONS at:

https://www.ons.gov.uk/peoplepopulationandcommunity/populationandmigration/populationestimates/bulletin s/annualsmallareapopulationestimates/mid2017

<sup>2</sup> A similar (but not identical) indicator on children in low income families published by the HMRC (see section 3.5) provides a figure of 62 per cent for Rhyl West 2 for a similar reference period. This makes it the second highest ranking LSOA according to their figures, with Tylorstown 1 (7<sup>th</sup> highest rate in the table above) ranking top at 63.5 per cent. Six of the above top 10 feature in the HMRC data's top 10 highest rates too, and all the above fall in the top 3% highest ranking LSOAs in the HMRC data.

The plot shows that there is a similar pattern of distribution between the percentage of children in income deprivation and the wider population. However the percentage of children in income deprivation is higher than the wider population. At the most deprived end of the distribution there is a steep increase in the percentage of children in income deprivation. The percentage falls by half in the first 148 ranks, from 99 per cent at rank = 1, to 49 per cent at rank = 148.

#### Chart 3.1 Income deprivation indicator distribution

Table 3.2 below relates some numbers to the plot above. Around half of those children in income deprivation are found in the most-deprived 25.6 per cent of LSOAs in Wales (according to this indicator). More than one in four (25.7 per cent) are found at a rank less than or equal to 196, that is, in the most deprived 10% of areas in Wales<sup>3</sup>.

Percentage of those aged 0-18 in households in income deprivation	Percentage of Welsh LSOAs	Income deprivation (aged 0-18) ranks <sup>3</sup>
25.7	most-deprived 10%	1 - 196
42.7	most-deprived 20%	1 - 390
50.0	most-deprived 25.6%	1 - 489
5.5	least-deprived 20%	1529 - 1909

<sup>3</sup>The number of ranks which make up the deprivation groupings may not equate exactly to the percentage of LSOAs due to ties in the data. Where ties do occur data is counted as part of the more deprived group.

Chart 3.2 below shows the spread of children in income deprivation (percentage) for each overall WIMD 2014 group described. The blue boxes contain half the total number of LSOAs in each WIMD group, centred on the median (middle) rate for each WIMD group. The lines show the full range of rates in LSOAs for each WIMD group, some LSOAs may contain small numbers of children, leading to possibly unreliable results.

As would be expected, there is a strong relationship between overall WIMD 2014 deprivation and the child income deprivation indicator. The average (median) percentage of children in income deprivation in the 10% most deprived LSOAs in WIMD 2014 was 53 per cent compared to 13 per cent in the 50% least deprived LSOAs in WIMD 2014. There is almost no overlap between the blue boxes (representing the "middle half") for each group. However each group has at least one LSOA with more than half its children in income deprivation.

Chart 3.2: Percentage of children in households in income deprivation, by WIMD 2014 groups

# 3.4 Children in households in income deprivation indicator, Local Authority analysis

Chart 3.3 overleaf shows the spread of percentages of children in households in income deprivation for each Local Authority in Wales. The blue boxes contain half the total number of LSOAs in each Local Authority, centred on the median (middle) rate for each Local Authority. The lines show the full range of rates in LSOAs for each Local Authority, some of these LSOAs may contain small numbers of children, leading to possibly unreliable results.

There is considerable variation between Local Authorities in terms of the median rates, but also within Local Authorities in terms of the range of values. For example, all (except Powys) contain at least one LSOA with around half or more children in income deprivation, and all (except Blaenau Gwent) contain at least one LSOA with fewer than one in ten children in income deprivation.

# Chart 3.3: Percentage of children in households in income deprivation, by Local Authority

Table 3.3 overleaf shows for the child income deprivation indicator, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales. This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for child income deprivation was Cardiff (20.1 per cent) followed by Blaenau Gwent (19.1 per cent). Both had a similar equivalent proportion for the overall population in the income domain of WIMD 2014.
- Powys had no LSOAs in the most deprived 10% and only 17.7 per cent in the most deprived 50% in Wales. This was again similar to the overall population in the income domain of WIMD 2014.
- Merthyr Tydfil had the highest proportion of LSOAs in the most deprived 50% in Wales (83.3 per cent). The next highest was Blaenau Gwent, with 83.0 per cent of its LSOAs in the most deprived half of Wales.

Local authority	Number of LSOAs in local authority	% LSOAs with the 10% highest rates (46 - 99%)	% LSOAs with the 20% highest rates (37 - 99%)	% LSOAs with the 30% highest rates (31 - 99%)	% LSOAs with the 50% highest rates (22 - 99%)
Isle of Anglesey	44	11.4	13.6	18.2	54.5
Gwynedd	73	4.1	4.1	6.8	31.5
Conwy	71	8.5	21.1	31.0	43.7
Denbighshire	58	12.1	17.2	24.1	48.3
Flintshire	92	1.1	8.7	18.5	38.0
Wrexham	85	4.7	12.9	23.5	42.4
Powys	79	0.0	2.5	10.1	17.7
Ceredigion	46	2.2	6.5	8.7	30.4
Pembrokeshire	71	4.2	7.0	19.7	40.8
Carmarthenshire	112	2.7	10.7	19.6	46.4
Swansea	148	12.2	23.6	33.8	47.3
Neath Port Talbot	91	13.2	26.4	40.7	67.0
Bridgend	88	12.5	26.1	42.0	63.6
Vale of Glamorgan	79	5.1	13.9	20.3	38.0
Rhondda Cynon Taf	154	13.0	28.6	50.6	72.7
Merthyr Tydfil	36	16.7	30.6	44.4	83.3
Caerphilly	110	10.0	22.7	35.5	70.0
Blaenau Gwent	47	19.1	42.6	55.3	83.0
Torfaen	60	18.3	26.7	38.3	63.3
Monmouthshire	56	1.8	1.8	8.9	21.4
Newport	95	17.9	35.8	44.2	54.7
Cardiff	214	20.1	33.2	42.5	52.3
Wales	1909	10.0	20.0	30.0	50.0

#### Table 3.3: Distribution of LSOAs by child income deprivation, within Local Authorities

#### 3.5 Children in households in income deprivation indicator background information

#### Definition

The indicator on income is a composite indicator which contains three elements: 1) Income-Related Benefit claimants, 2) Tax Credit recipients and 3) Supported Asylum Seekers. The indicator sums claimants and their dependents for the three elements, then expresses the sum as a percentage of the total residential population for each LSOA, based on Mid-2012 Small Area Population Estimates (from the Office for National Statistics). The counts are of unique individuals (i.e. those who claim multiple benefits are only counted once). For this article, the indicator is restricted to those aged 0-18 years old.

Income-Related Benefit claimants are defined as including Income Support claimants, Jobseekers Allowance claimants, Pension Credit claimants, and Income Based Employment and Support Allowance claimants and collected for the average of the individuals who were in receipt of these benefits during November 2012, February 2013, May 2013, and August 2013.

Tax Credit recipients are defined as the number of children and adults within families that are in receipt of Working Tax Credits and Child Tax Credits with an income which is less than 60 per cent of the

median income for Wales (Before Housing Costs) and collected for those in receipt of tax credits at 31 August 2012.

Supported Asylum Seekers data includes those who were supported under Section 95, at 1 September 2014.

#### Comparability over time

There were no methodological changes in the income domain between WIMD 2011 and WIMD 2014. However, recent changes to the welfare system mean that eligibility thresholds and criteria for some benefits have changed. This means that the indicator data will not be strictly comparable with earlier years.

Indicator data on children in households in income deprivation were published for 2011, 2012 and 2013 on StatsWales. The definition of "child" used for these years was slightly different from the 2014 indicator data. Data for these years define children as dependent children (within a claimant's family) aged 0-19, which for 16-19 year olds means they are in full time education. However for 2014 the data on claimants and their dependents is simply split by age, and for this article we refer to all those aged 0-18 as children.

We have not included analysis of children in income deprivation over time in this article due to the changes to the welfare system and the definition of "child" mentioned above. However, although care should be taken in interpreting absolute changes in rates, it is still possible to analyse relative changes over time. For example, to compare relative deprivation between 2011 and 2014 users can group LSOAs into deciles according to the relevant indicator data, and look at those areas which have moved up or down deciles. So an area moving from the third decile (20-30% most deprived) in 2011 to the first decile (10% most deprived) in 2014 would have worsened in terms of its relative child income deprivation.

#### Data Quality note

The WIMD income deprivation indicator uses administrative data combined with population estimates to provide estimates of rates of relative low income. There is an alternative small area poverty measure for children produced by the Child Poverty Unit within HMRC, called the <u>Children in Low Income Families</u> measure. It is similar (but not identical) in its use of benefit and tax credit claimant counts as a numerator, but the denominator used is different. HMRC use the counts of children derived from Child Benefit datasets. Both measures rely on the accuracy of several administrative systems, and (for WIMD) the accuracy of the ONS' Small Area Population Estimates for 0-18 year olds. Users are advised to be mindful of the potential quality issues, especially when using data for narrower (e.g. 5 year) age bands, and when using absolute values. In interpreting the WIMD indicator data at a local level, it is recommended that users seek other sources of evidence and use local knowledge to corroborate findings. Notes provided in the HMRC report apply equally to the WIMD indicator data:

"...this measure should not be used to obtain a definitive measure of child poverty in any given area. However, this measure can reliably be used to explore variations in low income..."

#### 4. Limiting long-term illness indicator

The limiting long-term illness indicator measures the number of people who selected the responses "Yes, limited a lot" and "Yes, limited a little" in the 2011 Census and is discussed in further detail below in section 4.5.

# 4.1 Key results

- Children have a much lower rate of limiting long-term illness, 4,615 per 100,000 (which amounted to just under 31,000 children in Wales with limiting long-term illness) compared to the rate of the overall population, 22,715 per 100,000 (which amounted to just under 696,000 people in Wales with limiting long-term illness).
- Rates for the middle half (the Inter-Quartile Range) of LSOAs across Wales range from 3,315 to 5,665 per 100,000 for this indicator. Blaenau Gwent had the most condensed middle half of LSOA ranges (3,696-5,388 per 100,000) compared to Vale of Glamorgan which was the most dispersed (2,359-5,595 per 100,000).
- Broadly speaking the child limiting long-term illness indicator follows a similar pattern to that of the overall population in the Health domain of WIMD 2014.
- In the limiting long-term illness indicator amongst children there were pockets of high deprivation in the south Wales valleys and large cities, and in some north Wales coastal towns.
- The Local Authority with the highest proportion of its LSOAs in the most deprived 10% in Wales for this indicator was Neath Port Talbot (28.6 per cent). This was considerably higher than the equivalent figure (17.6 per cent) for the area in the overall Health domain of WIMD 2014.
- Gwynedd and Monmouthshire had no LSOAs in the most deprived 10%.
- For the limiting long-term illness indicator amongst children, the most deprived LSOA in Wales was Cathays 5, in Cardiff<sup>4</sup>.
- 17.7 per cent of children with limiting long-term illness are found in the most deprived 10% of small areas for this indicator (the LSOAs ranked 1–191).
- Around half of those children with limiting long-term illness are concentrated in the most deprived 34.2 per cent of LSOAs for the indicator.

<sup>&</sup>lt;sup>4</sup> Some LSOAs may contain small populations of children, which may lead to unreliable results for the indicator in that LSOA e.g. Cathays 5 in Cardiff, which contained only 97 children. Census 2011 population estimates were used as the denominator for this indicator, and are published by the ONS at: <u>http://www.ons.gov.uk/ons/about-ons/business-transparency/freedom-of-information/what-can-i-request/published-ad-hoc-data/census/health/ct0449-2011-census.xls</u>

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Limiting Long-Term Illness, Rate per 100,000

# 4.2 Limiting long-term illness indicator amongst children LSOA analysis

Table 4.1 below shows the rate of the top ten most deprived small areas (LSOAs) for limiting long-term illness amongst those aged 0-18 (per 100,000)<sup>4</sup>:

- The most deprived LSOA for limiting long-term illness amongst children was Cathays 5 in Cardiff, with a rate of 15,464 per 100,000. However this LSOA did contain a small population of children (97), which may have a disproportionate effect on the indicator.
- Five of the ten most deprived LSOAs are found within the Neath Port Talbot Local Authority, two of which are neighbouring LSOAs (Sandfields West 4 and East 2).
- Eight of the ten most deprived LSOAs are found within south Wales. The remaining two are found in Conwy in the north of Wales.

### Table 4.1: Top ten most deprived LSOAs for children with limiting long-term illness<sup>1</sup>

LSOA	Local Authority	LSOA Name	Rate (per100,000)	Indicator count
W01001722	Cardiff	Cathays 5	15,464	15
W01001928	Conwy	Abergele Pensarn 2	11,250	18
W01000964	Neath Port Talbot	Sandfields West 4	11,196	44
W01000958	Neath Port Talbot	Sandfields East 2	11,165	46
W01000896	Neath Port Talbot	Briton Ferry West 1	10,504	50
W01000993	Bridgend	Caerau (Bridgend) 3	10,000	39
W01000913	Neath Port Talbot	Coedffranc Central 2	9,767	21
W01000994	Bridgend	Caerau (Bridgend) 4	9,756	36
W01000886	Neath Port Talbot	Aberavon 4	9,627	31
W01000149	Conwy	Kinmel Bay 1	9,559	26

Full data set with further age breakdowns is available on <u>StatsWales</u>.

# 4.3 Distribution of the limiting long-term illness indicator for children

Table 4.2 below shows around half of those children with limiting long-term illness are found in the most-deprived 34.2 per cent of LSOAs in Wales, according to this indicator. Nearly one in five (17.7 per cent) are found at a rank less than or equal to 191, that is, in the most deprived 10% of areas in Wales.

# Table 4.2: Distribution of children with limiting long-term illness

Percentage of those aged 0-18 with Limiting long term illness	Percentage of Welsh LSOAs	Limiting long term illness ranks (aged 0-18)
17.7	most-deprived 10%	1 - 191
32.2	most-deprived 20%	1 - 382
50.0	most-deprived 34.2%	1 - 652
9.4	least-deprived 20%	1529 - 1909

Chart 4.1 below shows the spread of child limiting long-term illness rates for each WIMD 2014 group described. The blue boxes contain half the total number of LSOAs in each WIMD group, centred on the

median (middle) rate for each WIMD group. The lines show the full range of rates in LSOAs for each WIMD group, some of these LSOAs may contain small numbers of children, leading to possibly unreliable results.

There is a relationship between overall WIMD 2014 deprivation and the limiting long-term illness indicator. The average (median) limiting long-term illness rate for children in the 10% most deprived LSOAs in WIMD 2014 was 6,280 per 100,000 compared to 3,626 per 100,000 in the 50% least deprived LSOAs in WIMD 2014.

Chart 4.1: Rate of children with limiting long-term illness, by WIMD 2014 groups

#### 4.4 Limiting long-term illness indicator amongst children Local Authority analysis

Chart 4.2 overleaf shows the spread of limiting long-term illness rates for each Local Authority in Wales. The blue boxes contain half the total number of LSOAs in each Local Authority, centred on the median (middle) rate for each Local Authority. The lines show the full range of rates in LSOAs for each Local Authority, some of these LSOAs may contain small numbers of children, leading to possibly unreliable results.

There is notable variation between Local Authorities in terms of the median rates, but also within Local Authorities in terms of the range of values. For example, all contain at least one LSOA with a rate of at least 6,000 per 100,000 with limiting long-term illness, and all (except Merthyr Tydfil) contain at least one LSOA with at most 2,000 per 100,000 with limiting long-term illness.

#### Chart 4.2: Child limiting long-term illness rates, by Local Authority

Table 4.3 overleaf shows for limiting long-term illness rates, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales. This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for limiting long-term illness was Neath Port Talbot (28.6 per cent) followed by Bridgend (26.1 per cent).
- Gwynedd and Monmouthshire had no LSOAs in the most deprived 10%. Only 31.8 per cent of the LSOAs in the Isle of Anglesey were in the most deprived 50% in Wales.
- Neath Port Talbot had the highest proportion of LSOAs in the most deprived 50% in Wales (71.4 per cent). The next highest was Bridgend, with 70.5 per cent of its LSOAs in the most deprived half of Wales.

Local authority	Number of LSOAs in local authority	% LSOAs with the 10% highest rates (rates 6,810-15,465)	% LSOAs with the 20% highest rates (rates 5,980-15,465)	% LSOAs with the 30% highest rates (rates 5,355-15,465)	% LSOAs with the 50% highest rates (rates 4,380-15,465)
Isle of Anglesey	44	2.3	9.1	18.2	31.8
Gwynedd	73	0.0	2.7	11.0	32.9
Conwy	71	8.5	18.3	31.0	50.7
Denbighshire	58	15.5	22.4	34.5	50.0
Flintshire	92	2.2	9.8	25.0	45.7
Wrexham	85	9.4	20.0	29.4	49.4
Powys	79	3.8	12.7	16.5	38.0
Ceredigion	46	4.3	15.2	21.7	39.1
Pembrokeshire	71	7.0	19.7	32.4	50.7
Carmarthenshire	112	10.7	21.4	33.9	58.0
Swansea	148	12.8	18.2	26.4	50.0
Neath Port Talbot	91	28.6	35.2	49.5	71.4
Bridgend	88	26.1	34.1	46.6	70.5
Vale of Glamorgan	79	12.7	20.3	29.1	36.7
Rhondda Cynon Taf	154	12.3	27.3	35.7	58.4
Merthyr Tydfil	36	13.9	41.7	47.2	69.4
Caerphilly	110	8.2	26.4	39.1	60.0
Blaenau Gwent	47	6.4	14.9	25.5	53.2
Torfaen	60	6.7	23.3	38.3	66.7
Monmouthshire	56	0.0	14.3	21.4	35.7
Newport	95	11.6	17.9	28.4	40.0
Cardiff	214	6.5	15.0	21.5	40.2
Wales	1909	10.0	20.0	30.0	50.0

# Table 4.3: Distribution of LSOAs by child limiting long-term illness, within Local Authorities

#### 4.5 Limiting long-term illness indicator background information

The limiting long-term illness indicator measures the number of people with a limiting long-term illness per 100,000 people (i.e. in the 2011 Census the responses "Yes, limited a lot" and "Yes, limited a little"), and is based on 2011 Census data (from the ONS). The question relating to limiting long-term illness was altered between the 2011 and 2001 Censuses. Therefore comparisons cannot be made directly with older data. For further information on analysis over time please see section 3.5 and Guidance Article.

In 2001 the question asked "Do you have any long-term illness, health problem or disability which limits your daily activities or the work you can do?" and the available responses were "Yes" or "No".

In 2011 this question changed to "Are your day-to-day activities limited because of a health problem or disability which has lasted, or is expected to last, at least 12 months?" and the available responses extended to "Yes, limited a lot", "Yes, limited a little" or "No".

Links to the full census can be found here: <u>http://www.ons.gov.uk/ons/guide-method/census/census-2001/about-census-2001/census-2001-forms/index.html (2001)</u>.

<u>http://www.ons.gov.uk/ons/guide-method/census/2011/how-our-census-works/how-we-took-the-</u> 2011-census/how-we-collected-the-information/questionnaires--delivery--completion-and-return/2011census-questions/index.html (2011).

#### 5. Low birth weight indicator

The low birth weight indicator measures the percentage of live single births (that is, excluding twins and other multiple births) where the birth weight is less than 2.5 Kg and is discussed in further detail below in section 5.5.

Please note, this section on low birth weight is shortened compared to other sections within this Article. This is due to the suppression of large numbers of LSOAs (364 of 1909) due to the potential for disclosure. The supressed LSOAs all fall within the least deprived quintile, therefore the analysis within this section should be treated with caution.

# 5.1 Key results

- The percentage of babies born with a low birth weight was 5.6 per cent, which amounted to nearly 19,000 babies in Wales
- Rates for the middle half of LSOAs (the Inter-Quartile Range) across Wales range from 3.9 to 6.9 per cent for this indicator. Blaenau Gwent had the most condensed middle half of LSOA ranges (5.6-7.6 per cent) compared to Merthyr Tydfil which was the most dispersed (4.4-8.2 per cent).
- In the low birth weight indicator high levels of deprivation were found in the south Wales valleys and large cities.
- Broadly speaking the low birth weight indicator follows a similar pattern to that of the overall
  population in the Health domain of WIMD 2014 and the limiting long-term illness indicator in this
  article (though there was not the same concentration of deprivation in the Neath Port Talbot and
  Bridgend Local Authorities as in the limiting long-term illness indicator).
- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for this indicator was Merthyr Tydfil (25.0 per cent) followed by Rhondda Cynon Taf (21.4 per cent). These Local Authorities also had the highest proportion of LSOAs in the most deprived 10% in the Health domain of WIMD 2014.
- For the low birth weight indicator, the most deprived LSOA in Wales was Cathays 6 in Cardiff<sup>5</sup>, with a percentage of 13.6. The neighbouring LSOA Cathays 5 was the most deprived LSOA for the other health indicator analysed in this article (limiting long-term illness).
- 18.4 per cent of those born with a low birth weight are found in the most deprived 10% of small areas for this indicator (the LSOAs ranked 1–191).
- Around half of those born with a low birth weight are concentrated in the most deprived 32.1 per cent of LSOAs for the indicator, compared to 34.2 per cent for limiting long-term illness. Thus deprivation for low birth weight is slightly more concentrated than deprivation for limiting longterm illness.

<sup>5</sup> Some LSOAs may contain small numbers of babies, which may have a disproportionate effect on the indicator in that LSOA e.g. Cathays 6 in Cardiff, which contained only 59 births in the period 2004-2013.

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Low Birth Weight Indicator, Percentage

# 5.2 Low birth weight indicator, LSOA analysis

Table 5.1 below shows the rate of the top ten most deprived small areas (LSOAs) for low birth weight (percentage):

- The most deprived LSOA for those born with a low birth weight was Cathays 6<sup>5</sup> in Cardiff, with a percentage of 13.6.
- Four of the ten most deprived LSOAs are found in the urban Local Authorities of Cardiff and Newport in south Wales.
- Three others of the ten most deprived LSOAs are found in the Rhondda Cynon Taf Local Authority.
- Nine of the ten most deprived LSOAs are found in south Wales.
- Within the top ten most deprived LSOAs, two of them are neighbouring LSOAs within the Local Authority of Rhondda Cynon Taf (Tylorstown 1 and Tylorstown 2).

### Table 5.1: Top ten most deprived LSOAs for babies with a low birth weight<sup>5</sup>

LSOA	Local Authority	LSOA Name	Percentage	Indicator count
W01001724	Cardiff	Cathays 6	13.6	8
W01000032	Isle of Anglesey	Moelfre	13.0	10
W01001662	Newport	Pillgwenlly 4	12.9	31
W01001085	Vale of Glamorgan	Cowbridge 4	12.8	11
W01001722	Cardiff	Cathays 5	12.5	6
W01001274	Rhondda Cynon Taf	Tylorstown 1	12.4	31
W01001275	Rhondda Cynon Taf	Tylorstown 2	12.3	34
W01001605	Newport	Allt-yr-yn 6	12.0	19
W01001471	Blaenau Gwent	Rassau 2	11.8	20
W01001232	Rhondda Cynon Taf	Porth 4	11.8	20

The full data set is available on <u>StatsWales</u>.

#### 5.3 Distribution of the low birth weight indicator

Table 5.2 below shows around half of those born with a low birth weight are found in the most-deprived 32.1 per cent of LSOAs in Wales, according to this indicator. Nearly one in five (18.4 per cent) are found at a rank less than or equal to 191, that is, in the most deprived 10% of areas in Wales.

#### Table 5.2: Distribution of babies born with a low birth weight

Percentage of those born with a low birth weight	Percentage of Welsh LSOAs	Low birth weight ranks (aged 0-18)
18.4	most-deprived 10%	1 - 191
33.6	most-deprived 20%	1 - 382
50.0	most-deprived 32.1%	1 - 612
7.4	least-deprived 20%	1529 - 1909

### 5.4 Low birth weight indicator, Local Authority analysis

Table 5.3 below shows for the low birth weight indicator, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales<sup>2</sup>. This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for those born with a low birth weight was Merthyr Tydfil (25.0 per cent) followed by Rhondda Cynon Taf (21.4 per cent).
- Blaenau Gwent had the highest proportion of LSOAs in the most deprived 50% in Wales (78.7 per cent). The next highest was again Rhondda Cynon Taf, with 70.1 per cent of its LSOAs in the most deprived half of Wales.

# Table 5.3: Distribution of LSOAs by babies born with a low birth weight, within Local Authorities<sup>6</sup>

	Number of	% LSOAs with the	% LSOAs with the	% LSOAs with the	% LSOAs with the
Local authority	LSOAs in local authority	10% highest rates (8.3 - 13.6%)	20% highest rates (7.2 - 13.6%)	30% highest rates (6.5 - 13.6%)	50% highest rates (2.0-13.6%)
Isle of Anglesey	44	9.1	15.9	31.8	45.5
Gwynedd	73	4.1	15.1	17.8	35.6
Conwy	71	9.9	16.9	22.5	47.9
Denbighshire	58	13.8	24.1	37.9	50.0
Flintshire	92	5.4	13.0	23.9	43.5
Wrexham	85	7.1	22.4	29.4	52.9
Powys	79	5.1	10.1	16.5	36.7
Ceredigion	46	6.5	15.2	17.4	32.6
Pembrokeshire	71	9.9	19.7	23.9	36.6
Carmarthenshire	112	8.9	16.1	25.0	50.9
Swansea	148	9.5	22.3	28.4	47.3
Neath Port Talbot	91	6.6	14.3	25.3	45.1
Bridgend	88	5.7	15.9	29.5	53.4
Vale of Glamorgan	79	5.1	12.7	24.1	40.5
Rhondda Cynon Taf	154	21.4	35.1	48.1	70.1
Merthyr Tydfil	36	25.0	36.1	52.8	63.9
Caerphilly	110	10.0	23.6	38.2	60.0
Blaenau Gwent	47	19.1	29.8	53.2	78.7
Torfaen	60	8.3	21.7	26.7	48.3
Monmouthshire	56	7.1	14.3	26.8	39.3
Newport	95	18.9	29.5	36.8	62.1
Cardiff	214	7.5	15.9	27.6	46.7
Wales	1909	10.0	20.0	30.0	50.0

<sup>6</sup>The limits of the data ranges have been supressed in this Article due to the potential for disclosure.

### 5.5 Low birth weight indicator background information

The indicator on low birth weight measures the percentage of live single births (that is, excluding twins and other multiple births) where the birth weight is less than 2.5 Kg. The data is based on the birth registrations between 2004-2013, published by the ONS. Low birth weight can be linked to the mother's lifestyle and health, as well as causing problems for the child in later life.

There were no methodological changes in the low birth weight indicator between WIMD 2011 and WIMD 2014 and therefore is comparable with earlier years. However, please note if an analysis over time is carried out on the low birth weight data, care should be taken in interpreting areas which have moved up or down deciles. As the data for 2014 and previous years are taken over a 10 year average there will be several overlapping years between the datasets. For further information on analysis over time please see section 3.5 and <u>Guidance Article</u>.

#### 6. Key Stage 4 level 2 inclusive indicator

The Key Stage 4 level 2 inclusive indicator measures the percentage of 15 year olds achieving the equivalent of 5 A\*-C grades at GCSE (including Mathematics and English/Welsh) and is discussed in further detail below in section 6.5.

Please note data on other education indicators (including Key Stage 2 average points score and Key Stage 4 capped points score) are available on StatsWales at: <u>https://statswales.wales.gov.uk/Catalogue/Community-Safety-and-Social-Inclusion/Welsh-Index-of-</u> <u>Multiple-Deprivation/WIMD-Indicator-Analysis/indicatordata-by-lowerlayersuperoutputareas-education</u>

# 6.1 Key results

- The percentage of 15 year olds achieving the Key Stage 4 level 2 inclusive indicator was 51.8 per cent, which amounted to more than 53,000 in Wales over three years
- Rates for the middle half of LSOAs (the Inter-Quartile Range) across Wales range from 39.4 to 65.2 per cent for this indicator. Blaenau Gwent had the most condensed middle half of LSOA ranges (29.8-45.0 per cent) compared to Cardiff which was the most dispersed (31.7-68.1 per cent).
- In the Key Stage 4 Level 2 inclusive indicator there were pockets of high deprivation in south Wales and some north Wales towns. This is broadly a similar pattern to the education domain of WIMD 2014.
- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for this indicator was Merthyr Tydfil (30.6 per cent) followed by Blaenau Gwent (25.5 per cent). These Local Authorities also had the highest proportion of LSOAs in the most deprived 10% in the education domain of WIMD 2014. Powys had no LSOAs in the most deprived 10%.
- For the Key Stage 4 Level 2 inclusive indicator, the most deprived LSOA in Wales was St James 3 in Caerphilly. This was also the most deprived LSOA in the education domain of WIMD 2014.
- 16.9 per cent of pupils not achieving the Key Stage 4 Level 2 inclusive standard are found in the most deprived 10% of small areas for this indicator (the LSOAs ranked 1–191).
- Around half of those 15 year olds not achieving the Key Stage 4 Level 2 inclusive standard are concentrated in the most deprived 35.3 per cent of LSOAs for the indicator.

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Key Stage 4 Level 2 Inclusive Indicator, Percentage

# 6.2 Key Stage 4 level 2 inclusive indicator, LSOA analysis

Table 6.1 below shows the rate of the top ten most deprived small areas (LSOAs) for the Key Stage 4 Level 2 inclusive indicator<sup>7</sup>, which measures the percentage achieving the equivalent of 5 A\*-C grades at GCSE (including Mathematics and English/Welsh):

- The most deprived LSOA for the Key Stage 4 Level 2 inclusive indicator was St. James 3 in Caerphilly, with a percentage of 11.3.
- Seven of the ten most deprived LSOAs are found within south Wales and two of the remaining three are found in Wrexham, in north Wales.
- The two Wrexham LSOAs in the top ten most deprived are neighbouring LSOAs (Queensway 1 and Wynnstay).

# Table 6.1: Top ten most deprived LSOAs for 15 year olds achieving the Key Stage 4 Level 2 inclusive standard<sup>7</sup>

LSOA	Local Authority	LSOA Name	Percentage	Indicator Count
W01001421	Caerphilly	St. James 3	11.3	8.0
W01000413	Wrexham	Queens way 1	12.9	8.0
W01001740	Cardiff	Ely 4	15.1	8.0
W01000592	Pembrokeshire	Milford: Hubberston 2	15.1	7.8
W01000991	Bridgend	Caerau (Bridgend) 1	15.7	8.0
W01001807	Cardiff	Llanrumney 6	15.9	13.0
W01001180	Rhondda Cynon Taf	Glyncoch 1	16.1	7.2
W01001473	Blaenau Gwent	Sirhowy 2	16.9	9.0
W01001457	Blaenau Gwent	Ebbw Vale North 2	17.0	12.0
W01000425	Wrexham	Wynnstay	17.3	16.4

Full data set is available on <u>StatsWales</u>.

# 6.3 Distribution of the Key Stage 4 Level 2 inclusive indicator

Table 6.2 below shows around half of those 15 year olds <u>not</u> achieving the Key Stage 4 Level 2 inclusive standard are found in the most-deprived 35.3 per cent of LSOAs in Wales, according to this indicator. Nearly one in six (16.9 per cent) are found at a rank less than or equal to 191, that is, in the most deprived 10% of areas in Wales.

# Table 6.2: Distribution of 15 year olds not achieving the Key Stage 4 Level 2 inclusive standard

Percentage of pupils not achieving the Key Stage 4 Level 2 inclusive standard	Percentage of Welsh LSOAs	Key Stage 4 Level 2 inclusive ranks
16.9	most-deprived 10%	1 - 191
30.8	most-deprived 20%	1 - 382
50.0	most-deprived 35.3%	1 - 673
9.5	least-deprived 20%	1529 - 1909

<sup>7</sup> Some LSOAs may contain small numbers of 15 year olds, which may have a disproportionate effect on the indicator in that LSOA. Data for seven (out of 1909) LSOAs have been suppressed in our StatsWales tables and this Article due to the potential for disclosure.

Chart 6.1 below shows the spread of those achieving the Key Stage 4 Level 2 inclusive standard for each WIMD 2014 group. The blue boxes contain half the total number of LSOAs in each WIMD group, centred on the median (middle) rate for each WIMD group. The lines show the full range of rates in LSOAs for each WIMD group, some of these LSOAs may contain small numbers of 15 year olds, leading to possibly unreliable results.

There is a relationship between overall WIMD 2014 deprivation and the 15 year olds achieving the Key Stage 4 Level 2 inclusive standard. The average (median) percentage of 15 year olds achieving the Key Stage 4 Level 2 inclusive standard in the 10% most deprived LSOAs in WIMD 2014 was 28.3 per cent compared to 64.0 per cent in the 50% least deprived LSOAs in WIMD 2014. Note that, for this indicator, deprivation increases with decreasing percentage (that is, toward the bottom of the plot).

# Chart 6.1: Percentage of 15 year olds achieving the Key Stage 4 Level 2 inclusive standard, by WIMD 2014 groups

#### 6.4 Key Stage 4 level 2 inclusive indicator, Local Authority analysis

Chart 6.2 overleaf shows the spread of percentages achieving Key Stage 4 Level 2 inclusive for each Local Authority in Wales. The blue boxes contain half the total number of LSOAs in each Local Authority, centred on the median (middle) rate for each Local Authority. The lines show the full range of rates in LSOAs for each Local Authority, some of these LSOAs may contain small numbers of 15 year olds, leading to possibly unreliable results. Deprivation increases with decreasing percentage (that is, toward the bottom of the plot).

There is more variation (than for other indicators in this Article) within and between Local Authorities in terms of the range the blue boxes (representing the "middle half") cover for each Local Authority (e.g. Cardiff has a range of 36.4 percentage points).

#### Chart 6.2: Key Stage 4 Level 2 inclusive percentages, by Local Authority

Table 6.3 overleaf shows, for the Key Stage 4 level 2 inclusive indicator, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales. This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for the Key Stage 4 level 2 inclusive indicator was Merthyr Tydfil (30.6 per cent) followed by Blaenau Gwent (25.5 per cent).
- Powys had no LSOAs in the most deprived 10%. Only 22.8 per cent of the LSOAs in Powys were in the most deprived 50% in Wales.
- Blaenau Gwent had the highest proportion of LSOAs in the most deprived 50% in Wales (87.2 per cent). The next highest was Merthyr Tydfil, with 86.1 per cent of its LSOAs in the most deprived half of Wales.

Local authority	Number of LSOAs in local authority	% LSOAs with the 10% lowest average (11.3 - 30.1%)	% LSOAs with the 20% lowest average (11.3 - 36.0%)	% LSOAs with the 30% lowest average (11.3 - 42.3%)	% LSOAs with the 50% lowest average (11.3 - 52.2%)
Isle of Anglesey	44	4.5	13.6	22.7	40.9
Gwynedd	73	2.7	9.6	11.0	31.5

Wales	1909	10.0	20.0	30.0	50.0

# Table 6.3: Distribution of LSOAs by 15 year olds achieving the Key Stage 4 Level 2 inclusive standard, within Local Authorities<sup>8</sup>

#### 6.5 Key Stage 4 Level 2 inclusive indicator background information

The Key Stage 4 Level 2 inclusive indicator measures the percentage of 15 year olds achieving the equivalent of 5 A\*-C grades at GCSE (including Mathematics and English/Welsh). The data is based on the Pupil Level Annual School Census (PLASC) and Welsh Examinations Database (WED), covering the academic years 2010/11 - 2012/13. This indicator is included as a measure of pupils completing compulsory school education with adequate numeracy and literacy skills, and only includes maintained schools. A lower percentage score in this indicator indicates a higher level of deprivation.

This indicator is intended to complement the Key Stage 4 Capped Points Score indicator (not included in this Article but data are available on StatsWales). Level 2 Inclusive and Capped Point Score replaced the Key Stage 4 Wider Point Score (used for WIMD 2011), as they measure complementary aspects of deprivation at the end of compulsory education. Therefore this is a new indicator for WIMD 2014 and therefore is not comparable with WIMD 2011.

For further information on analysis over time please see section 3.5 and Guidance Article.

<sup>8</sup>The limits of the data range have been supressed in this Article due to the potential for disclosure.

#### 7. Repeat absenteeism indicator

The repeat absenteeism indicator measures the percentage of primary and secondary school students missing 15 per cent or more of school sessions (which is used as a proxy for persistent absenteeism) and is discussed in further detail below in section 7.5.

# 7.1 Key results

- The percentage of repeat absenteeism for school aged children in Wales was 9.9 per cent, which amounted to more than 105,000 pupils
- In the repeat absenteeism indicator high levels of deprivation were found in south Wales, with all of the ten most deprived LSOAs found in this region.
- Rates for the middle half of LSOAs (the Inter-Quartile Rage) across Wales range from 5.8 to 12.8 per cent for this indicator. Gwynedd had the most condensed middle half of LSOA ranges (5.5-8.9 per cent) compared to Cardiff which was the most dispersed (4.9-15.0 per cent).
- Deprivation in this indicator was more concentrated in south Wales compared to the Key Stage 4 level 2 inclusive indicator and the education domain in WIMD 2014.
- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales, for this indicator, was Blaenau Gwent (21.3 per cent) followed by Cardiff and Rhondda Cynon Taf (18.2 per cent). Blaenau Gwent also had one of the highest proportions of LSOAs in the most deprived 10% of the Key Stage 4 Level 2 inclusive indicator and in the education domain of WIMD 2014. Conwy, Powys, Ceredigion and Monmouthshire all had no LSOAs in the most deprived 10%.
- For the repeat absenteeism indicator, the most deprived LSOA in Wales was Castle 2 North in Swansea <sup>9</sup>.
- 21.9 per cent of school aged children with repeat absence are found in the most deprived 10% of small areas for this indicator (the LSOAs ranked 1–191).
- Around half of those school aged children with repeat absence are found in the most deprived 29.2 per cent of LSOAs for the indicator compared to 35.3 per cent for the Key Stage 4 Level 2 inclusive standard. Thus deprivation for repeat absence is more concentrated than deprivation for the Key Stage 4 Level 2 inclusive standard.

<sup>9</sup> Some LSOAs may contain small numbers of school aged children, which may lead to unreliable results for the indicator in that LSOA e.g. Castle 2 North in Swansea, which contained only 31 school aged children.

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Repeat Absenteeism Indicator, Percentage

# 7.2 Repeat absenteeism indicator, LSOA analysis

Table 7.1 below shows the rate of the top ten most deprived small areas (LSOAs) for repeat absenteeism amongst school aged children (percentage)<sup>9</sup>:

- The most deprived LSOA for repeat absenteeism amongst school aged children was Castle 2 North in Swansea, with a percentage of 38.7. However this LSOA did contain a small population of school aged children (31), which may have a disproportionate effect on the indicator.
- Five of the ten most deprived LSOAs are found in the mainly urban Local Authorities of Swansea and Cardiff.
- All of the ten most deprived LSOAs are found in south Wales.

# Table 7.1: Top ten most deprived LSOAs for repeat absenteeism<sup>9</sup>

LSOA	Local Authority	LSOA Name	Percentage	Indicator count
W01001955	Swansea	Castle 2 North	38.7	12.0
W01001922	Cardiff	Cathays 9	33.3	16.0
W01001209	Rhondda Cynon Taf	Penrhiwceiber 1	28.0	229.7
W01001144	Rhondda Cynon Taf	Abercynon 2	27.4	208.0
W01001473	Blaenau Gwent	Sirhowy 2	26.6	154.8
W01001661	Newport	Pillgwenlly 3	26.4	248.2
W01000862	Swansea	Townhill 1	24.4	205.0
W01001867	Cardiff	Rumney 5	24.4	196.8
W01000833	Swansea	Penderry 4	24.2	206.0
W01001386	Caerphilly	New Tredegar 3	24.2	190.1

Full data set split between primary and secondary school pupils is available on <u>StatsWales</u>.

# 7.3 Distribution of the repeat absenteeism indicator

Table 7.2 below shows around half of those school aged children with repeat absence are found in the most-deprived 29.2 per cent of LSOAs in Wales (according to this indicator). More than one in five (21.9 per cent) are found at a rank less than or equal to 191, that is, in the most deprived 10% of areas in Wales.

# Table 7.2: Distribution of school aged children with repeated absence

Percentage of repeat absenteeism	Percentage of Welsh LSOAs	Repeat absenteeism ranks
21.9	most-deprived 10%	1 - 191
38.1	most-deprived 20%	1 - 382
50.0	most-deprived 29.2%	1 - 495
7.1	least-deprived 20%	1529 - 1909

Chart 7.1 overleaf shows the spread of repeat absenteeism percentages for each WIMD 2014 group described. The blue boxes contain half the total number of LSOAs in each WIMD group, centred on the median (middle) rate for each WIMD group. The lines show the full range of rates in LSOAs for each

WIMD group, some of these LSOAs may contain small numbers of school aged children, leading to possibly unreliable results.

There is a relationship between overall WIMD 2014 deprivation and the repeat absenteeism indicator. The average (median) percentage for repeat absenteeism in the 10% most deprived LSOAs in WIMD 2014 was 17.7 per cent compared to 5.9 per cent in the 50% least deprived LSOAs in WIMD 2014.

# Chart 7.1: Percentage of school aged children with repeated absence, by WIMD 2014 groups

# 7.4 Repeat absenteeism, Local Authority analysis

Chart 7.2 overleaf shows the spread of repeat absenteeism percentages for each Local Authority in Wales. The blue boxes contain half the total number of LSOAs in each Local Authority, centred on the median (middle) rate for each Local Authority. The lines show the full range of rates in LSOAs for each Local Authority, some of these LSOAs may contain small numbers of school aged children, leading to possibly unreliable results.

There is notable variation between Local Authorities in terms of the median rates, but also within Local Authorities in terms of the range of values. For example, all (except Ceredigion) contain at least one LSOA with at least 15% repeat absenteeism, and all contain at least one LSOA with at most 5% repeat absenteeism.

Table 7.3 overleaf shows for the repeat absenteeism indicator, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales.

Table 7.3: Distribution of LSOAs by school aged children with repeated absence, within Local Authorities

Local authority	Number of LSOAs in local authority	% LSOAs with the 10% highest rates (16.6-38.7%)	% LSOAs with the 20% highest rates (13.6-38.7%)	% LSOAs with the 30% highest rates (11.9-38.7%)	% LSOAs with the 50% highest rates (9.0-38.7%)
Isle of Anglesey	44	2.3	9.1	22.7	47.7
Gwynedd	73	5.5	6.8	6.8	24.7
Conwy	71	0.0	2.8	15.5	35.2
Denbighshire	58	6.9	10.3	19.0	32.8
Flintshire	92	2.2	10.9	22.8	34.8
Wrexham	85	4.7	11.8	21.2	32.9
Powys	79	0.0	3.8	12.7	30.4
Ceredigion	46	0.0	0.0	0.0	19.6
Pembrokeshire	71	7.0	15.5	26.8	46.5
Carmarthenshire	112	9.8	19.6	31.3	67.0
Swansea	148	16.2	31.1	38.5	54.1
Neath Port Talbot	91	11.0	27.5	37.4	65.9
Bridgend	88	10.2	22.7	31.8	54.5
Vale of Glamorgan	79	2.5	10.1	19.0	40.5
Rhondda Cynon Taf	154	18.2	34.4	48.1	71.4
Merthyr Tydfil	36	8.3	22.2	36.1	63.9
Caerphilly	110	15.5	28.2	39.1	66.4
Blaenau Gwent	47	21.3	38.3	57.4	76.6
Torfaen	60	3.3	5.0	23.3	50.0
Monmouthshire	56	0.0	3.6	5.4	25.0
Newport	95	16.8	32.6	42.1	52.6
Cardiff	214	18.2	30.4	40.2	53.7
Wales	1909	10.0	20.0	30.0	50.0

This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for repeat absenteeism was Blaenau Gwent (21.3 per cent) followed by Cardiff and Rhondda Cynon Taf (18.2 per cent).
- Conwy, Powys, Ceredigion and Monmouthshire all had no LSOAs in the most deprived 10%.
- Ceredigion also had no LSOAs in the most deprived 30% and only 19.6 per cent in the most deprived 50% in Wales.
- Blaenau Gwent had the highest proportion of LSOAs in the most deprived 50% in Wales (76.6 per cent). The next highest was again Rhondda Cynon Taf, with 71.4 per cent of its LSOAs in the most deprived half of Wales.

#### 7.5 Repeat absenteeism indicator background information

The repeat absenteeism indicator is measured by the percentage of primary and secondary school students missing 15 per cent or more of school sessions (which is used as a proxy for persistent absenteeism). The data is based on the Pupil Level Annual School Census (PLASC) covering the academic years 2010/11 – 2012/13. Data is based on all pupils of statutory school age attending a maintained school. The indicator only includes maintained schools.

The methodology by which this indicator was constructed changed between WIMD 2014 and WIMD 2011. The two absenteeism indicators from WIMD 2011 have been replaced in WIMD 2014 with a single indicator on repeat absenteeism that covers both primary and secondary absenteeism. Therefore comparisons cannot be made with older data.

For further information on analysis over time please see section 3.5 and the Guidance Article.

#### 8. Overcrowded households indicator

The overcrowded households indicator measures whether a household's accommodation is overcrowded, based on the number of bedrooms. The number of bedrooms required is subtracted from the number of bedrooms in the household's accommodation to obtain the occupancy rating and is discussed in further detail below in section 8.5.

#### 8.1 Key results

- Children have a higher rate of living in overcrowded households, 9.2 per cent (which amounted to over 61,500 overcrowded households with children in Wales) compared to the rate of the overall population, 5.5 per cent (which amounted to over 166,300 overcrowded households in Wales).
- Rates for the middle half of LSOAs (the Inter-Quartile Range) across Wales range from 5.1 to 12.0 per cent for this indicator. Powys had the most condensed middle half of LSOA ranges (4.6-8.4 per cent) compared to Cardiff which was the most dispersed (5.3-18.3 per cent).
- For children living in overcrowded households there were pockets of high deprivation in the south Wales valleys and large cities, and in some north Wales towns. Large cities in south Wales shared a similar pattern to that seen in the housing domain of WIMD 2014.
- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for this indicator was Cardiff (34.1 per cent) followed by Merthyr Tydfil (19.4 per cent). Cardiff also had the highest proportion of LSOAs in the most deprived 10% in the housing domain of WIMD 2014. Isle of Anglesey had no LSOAs in the most deprived 10%.
- For children living in overcrowded households the most deprived LSOA in Wales was Butetown 1, in Cardiff.
- 23.4 per cent of children who live in overcrowded households are found in the most deprived 10% of small areas for this indicator (the LSOAs ranked 1–191).
- Around half of those children who live in overcrowded households are concentrated in the most deprived 27.3 per cent of LSOAs for the indicator.

# Welsh Index of Multiple Deprivation 2014: Child Indicator Data Overcrowded Households Indicator, Percentage

# 8.2 Overcrowding indicator for children LSOA analysis

Table 8.1 below shows the rate of the top ten most deprived small areas (LSOAs) for the overcrowding indicator for those aged 0-18 (percentage)<sup>10</sup>:

- The most deprived LSOA for overcrowding for children was Butetown 1 in Cardiff, with a rate of 50.7 per cent.
- Nine of the ten most deprived LSOAs for child overcrowding are found within the Cardiff Local Authority.
- The most deprived LSOAs are highly concentrated within Cardiff, with three neighbouring LSOAs in Butetown and four other neighbouring LSOAs (Cathays 9, Cathays 6, Cathays 7 and Plasnewydd 4) within the top ten.
- All of the ten most deprived LSOAs are found within south east Wales.

#### Table 8.1: Top ten most deprived LSOAs for children living in overcrowded households<sup>10</sup>

LSOA	Local Authority	LSOA Name	Percentage	Indicator count
W01001699	Cardiff	Butetown 1	50.7	300
W01001952	Cardiff	Butetown 8	48.2	66
W01001922	Cardiff	Cathays 9	46.0	29
W01001942	Cardiff	Butetown 3	45.3	120
W01001941	Cardiff	Cathays 11	38.2	34
W01001724	Cardiff	Cathays 6	37.3	19
W01001725	Cardiff	Cathays 7	37.1	39
W01001662	Newport	Pillgwenlly 4	34.5	121
W01001832	Cardiff	Plasnewydd 4	34.2	25
W01001856	Cardiff	Riverside 2	32.2	127

Full data set with further age breakdowns is available on StatsWales.

# 8.3 Distribution of the overcrowded households indicator for children

Table 8.2 shows around half of those children who live in overcrowded households are found in the most-deprived 27.3 per cent of LSOAs in Wales, according to this indicator. More than one in five (23.4 per cent) are found at a rank less than or equal to 191, that is, the most deprived 10% of areas in Wales. Within the most deprived 10% of LSOAs, 38.2 per cent (73 of 191) are from the Cardiff Local Authority.

# Table 8.2: Distribution of children living in overcrowded households

Percentage of those aged 0-18 living in overcrowded households	Percentage of Welsh LSOAs	Overcrowding ranks (aged 0-18)
23.4	most-deprived 10%	1 - 191
39.8	most-deprived 20%	1 - 382
50.1	most-deprived 27.3%	1 - 552
5.8	least-deprived 20%	1529 - 1909

<sup>10</sup> Some LSOAs may contain small populations of children, which may lead to unreliable results for the indicator in that LSOA. Census 2011 population estimates were used as the denominator for this indicator, and are published by the ONS at: <u>http://www.ons.gov.uk/ons/about-ons/business-transparency/freedom-of-information/what-can-i-request/published-ad-hoc-data/census/housing-and-accommodation/ct0446-2011-census.xls</u>

Chart 8.1 below shows the spread of children in overcrowded households (percentage) for each WIMD 2014 group described. The blue boxes contain half the total number of LSOAs in each WIMD group, centred on the median (middle) rate for each WIMD group. The lines show the full range of rates in LSOAs for each WIMD group, some of these LSOAs may contain small numbers of children, leading to possibly unreliable results.

There is a relationship between overall WIMD 2014 deprivation and the overcrowded households indicator for children. The average (median) percentage of children living in overcrowded households in the 10% most deprived LSOAs in WIMD 2014 was 15.0 per cent compared to 5.4 per cent in the 50% least deprived LSOAs in WIMD 2014. However each group has at least one LSOA with more than 30% of its children in overcrowded households.

Chart 8.1: Percentage of children living in overcrowded households, by WIMD 2014 groups

# 8.4 Overcrowded households indicator for children, Local Authority analysis

Chart 8.2 overleaf shows the spread of percentages for children living in overcrowded households for each Local Authority in Wales. The blue boxes contain half the total number of LSOAs in each Local Authority, centred on the median (middle) percentage for each Local Authority. The lines show the full range of percentages in LSOAs for each Local Authority, some of these LSOAs may contain small numbers of children, leading to possibly unreliable results.

There is less variation (than for other indicators in this Article) between Local Authorities in terms of the median rates and all blue boxes (representing the "middle half") for each Local Authority overlap. Cardiff and Merthyr Tydfil stand out as having a median rate of more than one in ten children living in overcrowded households.

Table 8.3 overleaf shows for the overcrowded households indicator for children, the percentage of small areas (LSOAs) in each Local Authority which were in each of the following cumulative groups: the most deprived 10%, 20%, 30% and 50% of LSOAs in Wales. This analysis can be seen as identifying the concentration of the most deprived areas in a Local Authority, rather than an average level of deprivation.

- The Local Authority with the highest proportion of LSOAs in the most deprived 10% in Wales for children living in overcrowded households was Cardiff (34.1 per cent) followed by Merthyr Tydfil (19.4 per cent).
- The Isle of Anglesey had no LSOAs in the most deprived 10%.
- Only 27.8 per cent of the LSOAs in Powys were in the most deprived 50% in Wales.
- Blaenau Gwent had the highest proportion of LSOAs in the most deprived 50% in Wales (72.3 per cent). The next highest was Merthyr Tydfil, with 72.2 per cent of its LSOAs in the most deprived half of Wales.
- Cardiff showed the most dispersed pattern of deprivation. That is, the rates for its middle half of LSOAs (the Inter-Quartile range) are spread across the widest range. This was also the case to a lesser extent for other major urban areas (e.g. Swansea, Newport and Wrexham).

Local authority	Number of LSOAs in local authority	% LSOAs with the 10% highest rates (16.2-50.7%)	% LSOAs with the 20% highest rates (13.2-50.7%)	% LSOAs with the 30% highest rates (11.1-50.7%)	% LSOAs with the 50% highest rates (8.1-50.7%)
Isle of Anglesey	44	0.0	4.5	6.8	38.6
Gwynedd	73	5.5	15.1	37.0	63.0
Conwy	71	8.5	18.3	28.2	46.5
Denbighshire	58	12.1	20.7	27.6	44.8
Flintshire	92	9.8	19.6	30.4	46.7
Wrexham	85	18.8	28.2	32.9	55.3
Powys	79	1.3	5.1	10.1	27.8
Ceredigion	46	8.7	17.4	26.1	50.0
Pembrokeshire	71	1.4	9.9	22.5	50.7
Carmarthenshire	112	0.9	11.6	20.5	46.4
Swansea	148	10.1	25.0	33.8	48.0

Wales	1909	10.0	20.0	30.0	50.0

# Table 8.3: Distribution of LSOAs by children living in overcrowded households, within Local Authorities

#### 8.5 Overcrowded households indicator background information

This indicator provides a measure of whether a household's accommodation is overcrowded (based on the number of bedrooms). The ages of the household members and their relationships to each other are used to derive the number of bedrooms they require, based on a standard formula. The number of bedrooms required is subtracted from the number of bedrooms in the household's accommodation to obtain the occupancy rating. For example, an occupancy rating of -1 implies that a household has one fewer bedroom than required. The data is based on 2011 Census data (from the ONS).

A bedroom is defined as any room that was intended to be used as a bedroom when the property was built, or any room that has been permanently converted for use as a bedroom. It also includes all rooms intended for use as a bedroom even if not being used as a bedroom at the time of the census. Bedsits and studio flats are counted as having one bedroom.

The overcrowded households indicator for WIMD 2014 is not comparable with WIMD 2011. In WIMD 2011, an indicator based on overcrowded households (rooms measure) was used and this excluded all student households. For further information on analysis over time see section 3.5 and Guidance Article.

Links to further information on Census methodology can be found at: <u>http://www.ons.gov.uk/ons/guide-method/census/2011/census-data/2011-census-user-guide/quality-and-methods/quality/quality-notes-and-clarifications/index.html</u>

#### 9. Distributional analysis of children across deprivation groups for WIMD 2014 domains

Table 9.1 below shows the spread of those aged 0-18 across WIMD deprivation groups, that is, groups of LSOAs categorised by their deprivation rank. This is done for the overall WIMD 2014 and also for the following domains: community safety, physical environment and access to services. These domains can be viewed as describing the local area (broadly speaking how unsafe, polluted, or inaccessible it is), rather than capturing characteristics of the people or households within the area. The analysis below provides an indication of how the population of children in Wales is spread across the different deprivation categories of areas.

			Percen	tage of all children
Deprivation	Overall WIMD	Community	Physical	Access to
grouping for LSOAs	2014	safety domain	Environment domain	Services domain
most-deprived 10%	12.0	10.6	11.1	9.3
most-deprived 20%	22.8	21.5	20.7	19.3
most-deprived 30%	33.2	31.9	30.7	30.0
most-deprived 50%	53.1	52.3	50.9	50.9
least-deprived 50%	46.9	47.7	49.1	49.1

Table 9.1: Distribution of all children between deprivation groups for WI	MD 2014	ł
domains		

• A greater proportion of children live in the most deprived 10% of LSOAs in WIMD 2014 (12.0 per cent) than would be expected if evenly distributed. Only 46.9 per cent of those aged 0-18 live within the least deprived 50% of LSOAs in WIMD 2014.

- A slightly larger percentage of children live in the most deprived 10% of LSOAs for the WIMD 2014 community safety (10.6 per cent) and physical environment (11.1 per cent) domains than would be expected if evenly distributed.
- A slightly smaller percentage of children live in the most deprived 10% of LSOAs for the WIMD 2014 access to services domain (9.3 per cent) than would be expected if evenly distributed.

- WIMD 2014 Technical Report
- WIMD 2014: A guide to analysing deprivation in rural areas

Other UK nations produce their own Indices of Multiple Deprivation, including some analysis relevant to children:

- English indices of deprivation 2015 and sub-index for children
- <u>Scottish Index of Multiple Deprivation 2012</u>
- Northern Ireland Multiple Deprivation Measure 2010

On 11 December Welsh Government plan to update the Children and Young People's wellbeing monitor for Wales, which will be available at the following link: https://gov.wales/children-and-young-peoples-wellbeing-monitor-wales-0

This article is intended as the first in a series of Articles accompanying the annual Indicator data, and we welcome feedback on topics to cover, content and format of the Articles. Feedback can be sent to <u>stats.inclusion@gov.wales</u>

#### 11. Notes on the use of statistical articles

Statistical articles generally relate to one-off analyses for which there are no updates planned, at least in the short-term, and serve to make such analyses available to a wider audience than might otherwise be the case. They are mainly used to publish analyses that are exploratory in some way, for example:

- Introducing a new experimental series of data;
- A partial analysis of an issue which provides a useful starting point for further research but that nevertheless is a useful analysis in its own right;
- Drawing attention to research undertaken by other organisations, either commissioned by the Welsh Government or otherwise, where it is useful to highlight the conclusions, or to build further upon the research;
- An analysis where the results may not be of as high quality as those in our routine statistical releases and bulletins, but where meaningful conclusions can still be drawn from the results.

Where quality is an issue, this may arise in one or more of the following ways:

- being unable to accurately specify the timeframe used (as can be the case when using an administrative source);
- the quality of the data source or data used; or
- other specified reasons.

However, the level of quality will be such that it does not significantly impact upon the conclusions. For example, the exact timeframe may not be central to the conclusions that can be drawn, or it is the order of magnitude of the results, rather than the exact results, that are of interest to the audience.

The analysis presented does not constitute a National Statistic, but may be based on National Statistics outputs and will nevertheless have been subject to careful consideration and detailed checking before publication. An assessment of the strengths and weaknesses in the analysis will be included in the article, for example comparisons with other sources, along with guidance on how the analysis might be used, and a description of the methodology applied.

Articles are subject to the release practices as defined by the release practices protocol, and so, for example, are published on a pre-announced date in the same way as other statistical outputs. Missing value symbols used in the article follow the standards used in other statistical outputs, as outlined below.

- .. The data item is not available
- . The data item is not applicable
- The data item is not exactly zero, but estimated as zero or less than half the final digit shown
- \* The data item is disclosive or not sufficiently robust for publication
