CUMULATIVE DEATHS

Number of deaths involving COVID-19, reported and by date of deaths, by source:
5 March to 26 May 2020

Legend:
- Daily deaths reported by PHW
- PHW by date of death as published on 26 May
- ONS deaths by actual date of death (Wales only), registered by 23 May

Note: The Chief Statistician's blog explains why the PHW data differs to the more comprehensive ONS data

NOTES

Slide	Notes
Overall	The data published here are taken from management information and are subject to change. These data have not been subject to the same validation processes undertaken for official statistics releases. However, they are provided to support transparency and understanding of NHS activity at this time. The official statistics should continue to be considered the authoritative source of data.
Cases	Reporting times for tests and cases changed on 9th/10th April. Therefore, values of 8th April do not reflect 24 hours of activity on this date. New cases by test date is based on the day the sample was taken for testing. As test results take time to come back, sometimes three days, the last three days of new cases by test date have been excluded.
Deaths	Newly reported deaths are based on those reported at 2pm by Public Health Wales every day. The date of death is based on the day that the death occurred. As the date of deaths is updated retroactively after deaths are reported, the last three days are excluded. This includes deaths occurring in individuals who were laboratory confirmed with COVID19. The figures do not include individuals who may have died from COVID19 but who were not confirmed by laboratory testing. The majority of deaths reported occurred in hospital settings, however a proportion occurred in other settings. The Chief Statistician's blog explains why the PHW data differs to the more comprehensive ONS data
Invasive ventilated beds	Invasive ventilated beds include those beds in a critical care environment, plus those outside of a critical care environment. There are usually around 152 critical care beds in Wales. Field hospitals included from 21 April 2020 and community hospitals included from 23 April 2020. COVID19 patients include suspected, confirmed and recovering COVID19 patients. Historic data may have been revised and therefore may not be identical to that previously published. From 22 May, a change in reporting resulted in some patients in Wales being reclassified as COVID patients. Prior to this date, some COVID positive patients who had been in hospital for 14 days and recovered were reported as non COVID patients
General and acute beds	Field hospitals included from 21 April 2020 and community hospitals included from 23 April 2020. COVID19 patients include suspected, confirmed and recovering COVID19 patients. Historic data may have been revised and therefore may not be identical to that previously published. Prior to this date, some COVID positive patients who had been in hospital for 14 days and recovered were reported as non COVID patients

NOTES

Slide	Notes
Ambulance calls	Number of incidents in Wales that Welsh ambulances attended.
111 and NHS Direct calls	Figures represent total calls answered or calls abandoned after 60 seconds to 111 and NHS Direct. This data also differs from the Public Heath Wales Dashboard. The PHW dashboard only includes calls logged into their system for certain protocol and does not include all callers who wished to speak to an operator
Daily A&E attendances	Includes attendances to both major and minor hospitals. Some small minor A&E units are not able to submit daily data, therefore there is probably a small undercount in total attendance.
NHS staff absences	These figures include data for all NHS organisations in Wales but exclude data for Swansea Bay until 20 May (as they were unable to provide data on the same basis as the other organisations until that date). Cardiff & Vale do not provide data for weekends / bank holidays. Therefore, data for the previous Friday is repeated over Saturday and Sunday (and bank holiday Monday). Nursing and midwifery category includes only registered staff. The percentage of staff self-isolating does not necessarily reflect staff absent from work. For example, there will be staff who are able to continue working at home.
