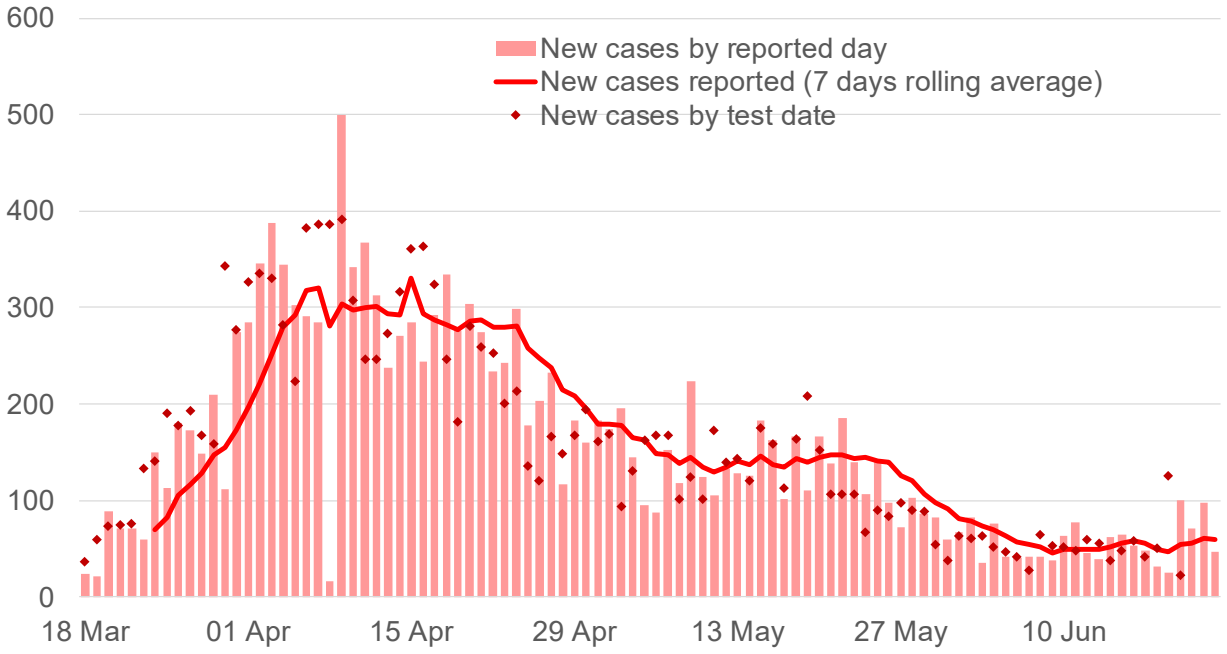
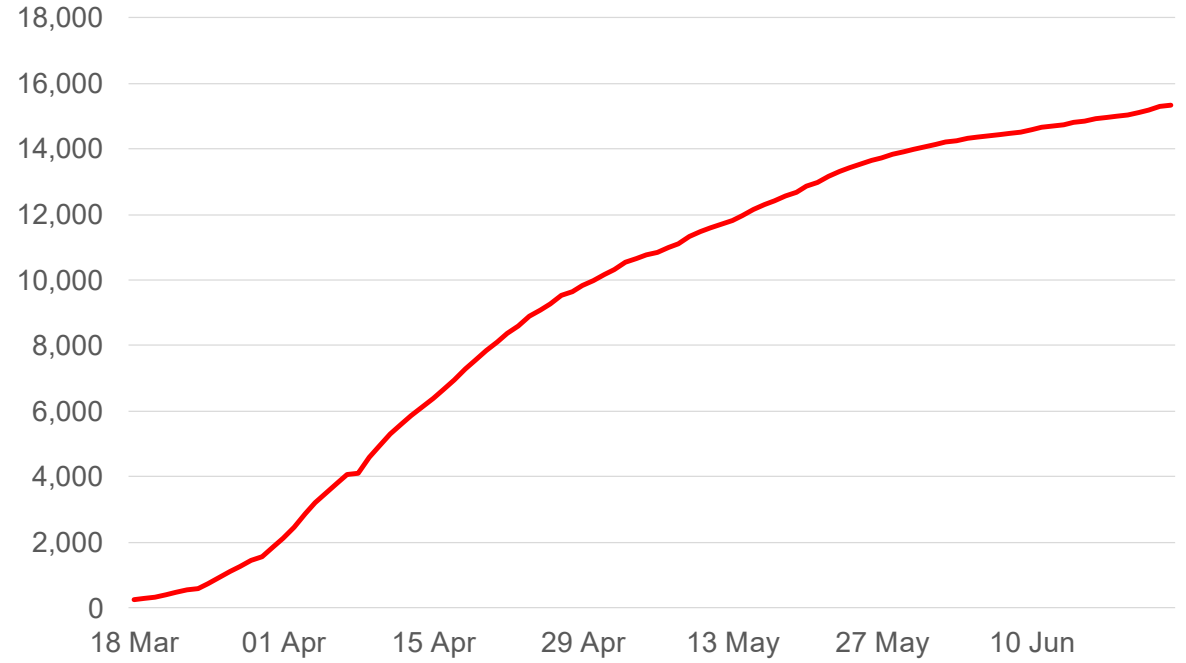
CASES

New cases by reported day and new cases by test date, NHS Wales laboratories only



Number of cumulative cases reported, NHS Wales laboratories only



These data do not include 25,809 tests from non-NHS Wales laboratories, with a cumulative total number of positive tests of 805.

NOTES

Slide	Notes
Overall	The data published here are taken from management information and are subject to change. These data have not been subject to the same validation processes undertaken for official statistics releases. However, they are provided to support transparency and understanding of NHS activity at this time. The official statistics should continue to be considered the authoritative source of data.
Cases	Reporting times for tests and cases changed on 9th/10th April so values of 8th April do not reflect 24 hours of activity on this date. New cases by test date is based on the day the sample was taken for testing. As test results take time to come back, sometimes three days, the last three days of new cases by test date have been excluded. Cases from NHS Wales laboratories only. These data do not include 25,809 tests from non-NHS Wales laboratories, with a cumulative total number of positive tests of 805. Test processed in non-NHS Wales labs include tests on Welsh residents taken at testing centres in England, home testing kits and some testing centres in Wales. PHW is currently undertaking work to review how data from NHS and non-NHS Wales labs link together. Due to a technical issue on 19 June 2020, not all cases were published by PHW. The technical issue has been resolved and figures not published by PHW on 19 June 2020 are included in the figures of 22 June 2020. For cumulative cases per 100,000 by local health board, population data are sourced from the Office of National Statistics 2019-Mid Year population estimates.
Daily deaths	Newly reported deaths are based on those reported at 2pm by Public Health Wales every day. The date of death is based on the day that the death occurred. As the date of deaths is updated retroactively after deaths are reported, the last three days are excluded. This includes deaths occurring in individuals who were laboratory confirmed with COVID19. The figures do not include individuals who may have died from COVID19 but who were not confirmed by laboratory testing. The majority of deaths reported occurred in hospital settings, however a proportion occurred in other settings. The Chief Statistician's blog explains why the PHW data differs to the more comprehensive ONS data
Cumulative deaths	Newly reported deaths are based on those reported at 2pm by Public Health Wales every day. The date of death is based on the day that the death occurred. As the date of deaths is updated retroactively after deaths are reported, the last three days are excluded. This includes deaths occurring in individuals who were laboratory confirmed with COVID19. The figures do not include individuals who may have died from COVID19 but who were not confirmed by laboratory testing. The majority of deaths reported occurred in hospital settings, however a proportion occurred in other settings. The Chief Statistician's blog explains why the PHW data differs to the more comprehensive ONS data Figures for deaths occurring only include deaths that were registered by the date indicated, so may be an underestimate due to registration delays. More information on registration delays for a range of causes can be found on the ONS website.
Invasive ventilated beds	Invasive ventilated beds number include temporary surge capacity, and beds both in and outside a critical care environment. There are usually around 152 critical care beds in Wales. Please see the Chief Statistician's blog for more information on the terminology around invasive ventilated beds. Field hospitals included from 20 April 2020 and community hospitals included from 23 April 2020. COVID19 patients include suspected, confirmed and recovering COVID19 patients. Historic data may have been revised and therefore may not be identical to that previously published..

Slide	Notes
General and acute beds	Field hospitals included from 20 April 2020 and community hospitals included from 23 April 2020. COVID19 patients include suspected, confirmed and recovering COVID19 patients. Historic data may have been revised and therefore may not be identical to that previously published.
Hospitalisations and admissions	Field hospitals included from 20 April 2020 and community hospitals included from 23 April 2020. Hospitalisation for COVID19 include suspected, confirmed and recovering COVID19 patients Historic data may have been revised and therefore may not be identical to that previously published.
Invasive ventilated beds; General and acute beds and Hospitalisations and admissions	Please see the Chief Statistician's blog for more information on recovering patients. Recovering patients are COVID positive patients who had been in hospital for 14+ days with no signs and symptoms, but remain in hospital on a COVID treatment pathway, often for rehabilitation. Health boards were asked to make the change from the 26 May 2020. One health board made the change on 22 May, including the recovering COVID patients in the confirmed category until 25 May. One health board made the change on the 8 June 2020. Hospitals are starting to close some of the additional surge capacity that was previously put in place for the COVID-19 pandemic.
Ambulance calls	Number of incidents in Wales attended by WAST resources, excluding incidents in England.
111 and NHS Direct calls	Figures represent total calls answered or calls abandoned after 60 seconds to 111 and NHS Direct. This data also differs from the Public Heath Wales Dashboard. The PHW dashboard only includes calls logged into their system for certain protocol and does not include all callers who wished to speak to an operator
Daily A&E attendances	Includes attendances to both major and minor hospitals. Some small minor A&E units are not able to submit daily data, therefore there is probably a small undercount in total attendance.
NHS staff absences	These figures include data for all NHS organisations in Wales but exclude data for Swansea Bay until 20 May (as they were unable to provide data on the same basis as the other organisations until that date). Cardiff & Vale do not provide data for weekends / bank holidays. Therefore, data for the previous Friday is repeated over Saturday and Sunday (and bank holiday Monday). Nursing and midwifery category includes only registered staff. The percentage of staff self-isolating does not necessarily reflect staff absent from work. For example, there will be staff who are able to continue working at home. Changes in the way the data is collected in Betsi Cadwaladr from 8 June have improved data accuracy. As a result there has been a reduction in the total number of staff reported as absent and a reduction in the number of staff whose absence is due to COVID19.
