

Labour Market Overview, September 2023

14 September 2023
SB 32/2023

Key points for May to July 2023

- The employment rate in Wales was 74.0% (approximately 1.48 million). This is up 2.1 percentage points on the quarter and up 1.9 percentage points on the year.
- The unemployment rate in Wales was 3.8% (approximately 58,300 people). This is down 1.1 percentage points on the quarter and up 0.5 percentage points on the year.
- The economic inactivity rate in Wales was 23.2% (approximately 443,800 people). This is down 1.2 percentage points on the quarter and down 2.4 percentage points on the year.

Figure 1: Employment rate (percentage of population age 16-64), 3 months to July 1999 to the 3 months to July 2023

Description of Figure 1: A line chart showing the employment rate in Wales and the UK from 1999 onwards. During this time period, the employment rate in Wales has generally remained lower than the UK. Both the rates in Wales and the UK have increased overall since 1999.

Source: Labour Force Survey, Office for National Statistics

Other data sources

The latest official labour market estimates cover the period May to July 2023. Other data sources and indicators are also presented in this report to provide a more complete picture.

- Early estimates for August 2023 indicate that the number of paid employees in Wales has decreased by 1,700 (0.1%) over the month to 1.32 million.
- The claimant count now (August 2023) stands at 60,800, a decrease of 4.3% (2,800) compared to the same month in the previous year. This is a rate of 3.7%, a decrease of 0.2 percentage points over the same period.

About this bulletin

This monthly bulletin is a compendium publication that brings together the latest key statistics relating to the Welsh labour market.

Key labour market (LFS) data

The Office for National Statistics (ONS) indicate that there is an increasing challenge to maintain response rates for the Labour Force Survey and that headline numbers and trends for employment are starting to vary from other labour market data sources. In addition to the [Office for National Statistics blog](#) on this topic, please see the latest [Chief Statistician's update on understanding and managing the impact of these challenges for labour market data in Wales](#).

The LFS is a sample survey and, as such, estimates obtained from it are subject to sampling variability. If we drew many samples, each would give a different result. Please note statistical significance and confidence intervals are only available for headline labour market indicators.

Table 1 shows the variability of the estimates, quarterly change and annual change using 95% confidence intervals. It is expected that in 95% of samples the range would contain the true value. If none of the reported changes over the year or the quarter were statistically significant, then the recorded changes did not exceed the variability expected from a sample survey of this size

More information about statistical significance and the accuracy of estimates is available in section 4.2 of [Key Quality Information](#).

Table 1: Estimates, confidence intervals and statistical significance for Labour Market Indicators in Wales, May to July 2023

Source: WG analysis of Labour Force Survey, ONS

¹ Rates are the proportion of the total population aged 16-64.

² Rate is the proportion of the economically active population aged 16 and over.

Table 1 shows there were no statistically significant changes for headline labour market indicators in the three months to July 2023. This suggests that the quarterly and annual changes for these indicators are unlikely to reflect a real change in the data.

The population totals used for the latest LFS estimates use projected growth rates from RTI data for UK, EU and non-EU populations based on 2021 patterns. The total population used for the LFS therefore does not take into account any changes in migration, birth rates, death rates etc. since June 2021 and hence levels estimates may be under- or over-estimating the true values and should be used with caution. Estimates of rates will, however, be robust.

The Office for national Statistics (ONS) plan to reweight the Labour Force Survey (LFS) published data using more up-to-date population estimates, drawing on the latest census data alongside the labour market release in October 2023. ONS intend to publish indicative estimates of the reweighted LFS in an article in September 2023.

In response to the coronavirus (COVID-19) pandemic, ONS increased the wave 1 LFS issued sample size to mitigate the drop in response rates. In July 2023, it reverted to pre-pandemic wave 1 LFS sample sizes, which may potentially have an impact on response numbers and sampling variability. The full impact of this change will not be apparent until at least a full quarter of data is available in November 2023.

1. Employment & Jobs

Key Points:

- In May to July 2023, the employment rate in Wales increased for both males and females when compared to both the previous quarter and the previous year. (Labour Force Survey, ONS).
- Early estimates for August 2023 indicate that the number of paid employees in Wales has decreased by 1,700 (0.1%) over the month to 1.32 million. (Pay As You Earn Real Time Information, HMRC).
- In August 2023, Gwynedd had the largest increase in the number of paid employees in Wales compared to the same month in the previous year, increasing by 2.8%. The smallest increase over the same period was seen in Ceredigion (0.4%) (Pay As You Earn Real Time Information, HMRC).
- In the three months to July 2023, the average number of hours worked in the UK was 31.6 hours, down 0.4 hours (1.1%) from the previous quarter and down 0.2 hours (0.5%) from the same quarter in the previous year. (Labour Force Survey, ONS).
- There were 324,000 people employed in the public sector in Wales during June 2023, up by 7,000 (2.3%) from the same period the previous year (Regional Public Sector Employment, ONS).
- The number of workforce jobs in Wales fell by 61,600 (4.0%) between June 2022 and June 2023 to 1.47 million (Workforce Jobs, ONS).
- The number of self-employment jobs in Wales in June 2023 was 164,800 (11.2% of workforce jobs), a decrease of 30,100 (15.4%) over the year.

Labour Force Survey Employment (ONS)

LFS employment: people aged 16 to 64 who did at least one hour of paid work in the reference week (whether as an employee or self-employed); those who had a paid job that they were temporarily away from; those on government-supported training and employee programmes and those doing unpaid family work.

Note: During the Coronavirus (COVID-19) pandemic figures for employment include employees who have been furloughed.

The employment rate in Wales remained broadly stable towards the end of 2019 and the beginning of 2020 following a steady decrease since late 2018. The employment rate began to fall in early 2020 as a result of the coronavirus pandemic but returned to pre-pandemic levels in early 2021. The employment rate remained broadly stable until the end of 2021 but has been volatile since then.

Figure 1.1: Employment rate, persons (percentage of those aged 16-64), 3 months to July 2018 to the 3 months to July 2023

Description of figure 1.1: A line chart showing the fluctuating employment rates in both Wales and the UK over the last five years, with the UK generally having a higher employment rate than Wales. The Welsh rate peaked towards the end of 2018, rising above the UK for the first time, but has seen an overall decrease since then.

Source: Welsh Government analysis of Labour Force Survey

There were 1.48 million people in employment in Wales in May to July 2023, up 32,800 (2.3%) from the same period a year earlier. This is a rate of 74.0% of those aged 16-64, which is up 2.1 percentage points on the previous quarter and up 1.9 percentage points on the previous year.

Over the year, the employment level in the UK rose by 135,400 (0.4%) to 32.9 million. This is a rate of 75.5% of those aged 16-64, which is 1.5 percentage points higher than the employment rate for Wales (based on unrounded figures). Wales had the fourth lowest employment rate of the 12 UK countries and English regions in May to July 2023. The trend in employment rates have

differed between Wales and the UK in recent periods, however the changes for Wales are not statistically significant and should be considered alongside the longer-term trend.

Employment and Sex

Employment in Wales is historically higher for males than for females, which is reflected in higher female economic inactivity (figure 3.2). This is primarily because females are more likely to have full-time caring responsibilities. The gap in employment rates between males and females narrowed in the first year of the pandemic but has generally widened since, despite some volatility in the monthly figures.

Figure 1.2: Employment rate, males and females (percentage of those aged 16-64), 3 months to July 2018 to the 3 months to July 2023

Description of figure 1.2: A line chart that shows the male and female employment rate in Wales and the UK. Male employment in Wales decreased to the lowest rate in five years in mid 2020, before increasing again. Female employment in Wales has seen an overall decrease since the end of 2021 after a period of relatively stable rates.

Source: Welsh Government analysis of Labour Force Survey

There were 780,000 males in employment in Wales in May to July 2023, up 7,200 (0.9%) from the same period a year earlier. This is a rate of 78.8% of those aged 16-64, up 2.4 percentage points from the same period a year earlier. The number of males in employment in the UK rose by 8,700 (0.1%) over the year to 17.1 million. This is a rate of 78.6% of those aged 16-64, down 0.2 percentage points from a year earlier.

There were 703,900 females in employment in Wales in May to July 2023, up 25,500 (3.8%) from the same period a year earlier. This is a rate of 69.2% of those aged 16-64, up 1.5 percentage points from the same period a year earlier. The number of females in employment in the UK was 15.7 million, up 126,700 (0.8%) over the year. This is a rate of 72.4% of those aged 16-64, up 0.3 percentage points from a year earlier.

Experimental Real Time Pay Information (HMRC)

HMRC's Pay As You Earn (PAYE) Real Time Information (RTI): These data come from HM Revenue and Customs' (HMRC's) Pay As You Earn (PAYE) Real Time Information (RTI) system. They cover the whole population rather than a sample of people or companies, and they will allow for more detailed estimates of the population. PAYE RTI covers employees payrolled by employers only. It does not cover self-employment income or income from other sources such as pensions, property rental and investments. Where individuals have multiple sources of income, only income from employers is included.

The release is classed as Experimental Statistics as the methodologies used to produce the statistics are still in their development phase. As a result, the series are subject to revisions.

The Office for National Statistics and HM Revenue & Customs (HMRC) publish [data for Wales](#) on payrolled employees, mean pay, aggregate pay and single month estimates for median pay.

Figure 1.3: Paid employees, Wales, August 2017 to August 2023

Description of figure 1.3: A line chart showing the trend in the number of paid employees over the past few years has been generally increasing despite a steep decrease between March 2020 and July 2020.

Source: Pay As You Earn Real Time Information, HM Revenue and Customs

The number of paid employees has generally increased in recent years, but fell during the pandemic. The number of paid employees returned to pre-pandemic levels in July 2021, and has continued to increase since.

Early estimates for August 2023 indicate that the number of paid employees in Wales has decreased by 1,700 (0.1%) over the month to 1.32 million.

At a UK level, early estimates for August 2023 showed a small monthly decrease of 1,000 (0.0% to 1 decimal place).

Quarterly RTI Updates

Employees by local authority

In September 2023, estimates of the number of paid employees by local authority area were published by HMRC. The latest data refers to August 2023 and the next update to this data will be in December 2023.

Figure 1.4: Percentage change of paid employees by local authority, Wales, August 2022 to August 2023

Description of figure 1.4: A horizontal bar chart showing the year on year percentage change of paid employees for each local authority. Gwynedd and Cardiff had the largest increases over the year.

Source: Pay As You Earn Real Time Information, HM Revenue and Customs

In August 2023 all Welsh local authority areas saw an increase in the number of paid employees when compared with the same month in the previous year. Gwynedd had the largest increase at 2.8%, and Ceredigion had the smallest increase at 0.4%.

Employees by industry sector

In August 2023, HMRC published data for the number of paid employees by industry sector for the UK countries and English regions. The latest data refers to July 2023 and the next update to this data will be in November 2023.

Figure 1.5: Percentage change of paid employees by industry sector, Wales, July 2022 to July 2023

Description of figure 1.5: A horizontal bar chart showing the year on year percentage change of paid employees for each industry sector in Wales. The Finance and insurance sector had the largest increase, and the Mining and quarrying sector had the largest decrease.

Source: Pay As You Earn Real Time Information, HM Revenue and Customs

In July 2023, the Finance and insurance sector had the largest increase (up 7.7%) in the number of paid employees when compared to the previous year. The largest decrease over the same period was in the Mining and quarrying sector (down 3.9%).

Employees by age

In July 2023, HMRC published data by age group for the UK countries and English regions. The latest data refers to June 2023 and the next update for these statistics will be in October 2023.

Figure 1.6: Paid employees by age group, Wales (Index 2019=100), June 2019 to June 2023

Description of figure 1.6: A line chart showing the number of paid employees by age group. Paid employees under the age of 18 in Wales dropped considerably during 2020, but rose above pre-pandemic levels in late 2021.

Source: Pay As You Earn Real Time Information, HM Revenue and Customs

In June 2023, the age groups: under 18 and 18 to 24 both experienced decreases in the number of paid employees when compared to the previous year. The age groups: 25 to 34, 35 to 49, 50 to 64 and over 65 all experienced increases over the same period, with the number of employees aged 65 and over having the largest increase since 2019.

Hours worked (ONS)

Hours worked: Labour Force Survey statistics for usual hours worked measure how many hours people usually work per week. They are not affected by absences and so can provide a good measure of normal working patterns.

Latest data for the UK are sourced from the LFS. Due to the sample size, data for Wales are derived from the APS and are therefore not as timely.

Figure 1.7: Average hours worked, UK, 3 months to July 2013 to the 3 months to July 2023

Description of figure 1.7: A line chart showing the average hours worked in the UK. Generally the hours worked remained relatively stable until a large drop in April-June 2020 (to a record low). Since then, the average hours worked have been recovering although still remain slightly lower than previous levels.

Source: Labour Force Survey, ONS

The pandemic had a large impact on actual hours worked, with average weekly hours worked not returning to pre-pandemic estimates (February 2020) of 31.8 hours per week until December to February 2022. In the three months to July 2023, the average number of hours worked in the UK was 31.6 hours, down 0.4 hours (1.1%) from the previous quarter and down 0.2 hours (0.5%) from the same quarter in the previous year.

Total actual weekly hours worked was at 1.04 billion over the same period, a decrease of 18.5 million hours (1.7%) compared to the previous quarter and a decrease of 1.3 million hours (0.1%) compared to the previous year.

The Annual Population survey (APS) estimates that during the year to March 2023, the average number of hours worked in Wales was 31.2 hours per week, a decrease of 0.2 hours from the previous year. Males in Wales worked an average of 34.9 hours per week and females worked an average of 27.3 hours per week.

The number of hours worked may be affected by labour disputes. ONS publish [labour disputes statistics](#), which shows that in July 2023 there were 1,100 working days lost because of labour

disputes in Wales. This is a large decrease of 12,700 days compared to the previous month, returning to levels similar to May 2023.

Public Sector Employment (ONS)

Public Sector: The public sector comprises central government, local government and public corporations as defined for the UK National Accounts. The national accounts are compiled based on an internationally comparable accounting framework and describe the activities in a national economy. Data sourced from an ONS data collection on Public Sector Employment.

Figure 1.8: Public sector employment (percentage of population, not seasonally adjusted), June 2018 to June 2023

Description of figure 1.8: A line chart that shows both Wales and the UK have had an increasing rate of public sector employment over the last five years. Wales has a higher percentage of the population employed in the public sector than the UK.

Source: Welsh Government analysis of Regional Public Sector Employment, ONS

According to Public Sector Employment data, there were 324,000 people employed in the public sector in Wales in June 2023, up by 7,000 (2.3%) from a year earlier. This is 10.4% of the population, up 0.3 percentage points over the year.

Public sector employment in the UK increased over the same period by 2.3% to 5.9 million. This is 8.8% of the population, up 0.2 percentage points on the previous year.

Workforce Jobs (ONS)

Workforce Jobs: The number of people with jobs is not the same as the number of jobs. This is because a person can have more than one job. The number of people with jobs is measured by the Labour Force Survey (LFS). The number of jobs is measured by Workforce Jobs (WFJ) and is the sum of employee jobs from employer surveys, self-employment jobs from the LFS, those in HM Forces and government- supported trainees. The LFS and WFJ measures are reconciled each quarter in an [article published](#) on ONS' website. Jobs vacancies are measured separately by the Vacancy Survey.

Figure 1.9: Workforce jobs (Index 1999=100), June 1999 to June 2023

Description of figure 1.9: A line chart showing that the number of workforce jobs in both Wales and the UK have generally increased since 1999. The trend in workforce jobs for both Wales and the UK have remained generally comparable since 1999, despite the Wales series being more volatile.

The number of workforce jobs in Wales in June 2023 was 1.47 million, a decrease of 61,600 (4.0%) over the year. Since June 1999, the number of workforce jobs in Wales rose by 235,000 (19.1%). The number of workforce jobs in the UK increased over the year by 551,400 (1.5%) to 36.7 million and has increased by 7.3 million (25.1%) since June 1999.

Figure 1.10: Self-employment jobs (Index 1999=100), June 1999 to June 2023

Description of figure 1.10: A line chart showing that the number of self-employment jobs in both the UK and Wales have generally increased since 1999 and have followed similar trends. The trend has seen an overall decrease over the last three years for both Wales and the UK, despite the series for Wales showing more volatility.

Source: Welsh Government analysis of Workforce Jobs, ONS

The number of self-employment jobs in Wales in June 2023 was 164,800, a decrease of 30,100 (15.4%) over the year. Since June 1999, self-employment jobs in Wales increased by 21,300 (14.9%), accounting for 11.2% of workforce jobs (compared to 11.7% in June 1999). However, it is important to note the volatility of this series. The estimate of the number of self-employment jobs in the UK in June 2023 was 4.0 million (11.0% of workforce jobs), down 94,200 (2.3%) over the year.

Figure 1.11: Workforce jobs by Industry sector, Wales, June 2023

Description of figure 1.11: A horizontal bar chart showing the number of workforce jobs in each industry sector in Wales. Human health and social work activities was the industry with the largest number of jobs.

Source: Welsh Government analysis of Workforce Jobs, ONS

In June 2023, Human health & social work activities accounted for 14.6% of workforce jobs in Wales, the highest of any industry. This was followed by Wholesale & retail trade with 13.4% of workforce jobs.

2. Unemployment

Key Points:

- In May to July 2023, the unemployment rate in Wales decreased for males compared to the previous quarter but increased compared to the previous year. For females, the unemployment rate increased compared to both the previous quarter and the previous year. (Labour Force Survey, ONS)
- The claimant count now (August 2023) stands at 60,800, a decrease of 4.3% (2,800) compared to the same month in the previous year. This is a rate of 3.7%, a decrease of 0.2 percentage points over the same period (based on unrounded figures). (Jobcentre Plus Administration System, Department for Work and Pensions)
- After the large initial increase at the start of the pandemic, the number of people on Universal Credit decreased between April 2021 and December 2021. Since March 2022, the number of people on Universal credit has increased each month, to a new high in August 2023. (Department for Work and Pensions)
- In the week ending 1st September 2023 (the latest week), online job adverts in Wales decreased by 5.6% compared to the previous month (week ending 4th August 2023). (Weekly Online Job Advert Estimates, ONS)

Labour Force Survey Unemployment (ONS)

LFS Unemployment: The number of unemployed people in the UK is measured through the Labour Force Survey (LFS) following the internationally agreed definition recommended by the International Labour Organisation (ILO) – an agency of the United Nations. Unemployed people are without a job, have actively sought work in the last four weeks and are available to start work in the next two weeks; or are out of work, have found a job and are waiting to start it in the next two weeks.

The headline unemployment rate is calculated by dividing the unemployment level for those aged 16 and over by the total number of economically active people aged 16 and over.

Historically, the Welsh unemployment rate has generally tracked the UK rate and had been gradually falling since the early 2010s, before rising sharply as a result of the coronavirus pandemic. In August to October 2019, the Welsh unemployment rate fell below the UK rate and remained below until March to May 2022 where both rates were 3.8% (to 1 decimal place). Since then, the Wales rate has fluctuated around the UK rate, despite some volatility in the data.

Please note in recent years the data presented for the number of those unemployed and the unemployment rate have shown particularly high volatility as the number of unemployed people, as well as the sample sizes, have dropped. Due to this volatility, short-term changes should be considered alongside longer-term trends where possible.

Figure 2.1: ILO Unemployment rate (percentage of economically active population), 3 months to July 2018 to the 3 months to July 2023

Description of Figure 2.1: A line chart showing that the unemployment rate in both Wales and the UK have shown similar movements, however the unemployment rate in Wales has fluctuated more than the UK rate.

Source: Welsh Government analysis of Labour Force Survey

During May to July 2023, there were 58,300 unemployed people in Wales, an increase of 9,700 compared to the same period a year earlier. This is a rate of 3.8% of the economically active population, down 1.1 percentage points from the previous quarter and up 0.5 percentage points

compared to a year earlier. Unemployment rate changes should be considered alongside longer-term trends where possible due to the recent volatility of the series.

There were 1.46 million unemployed people in the UK in May to July 2023, up 240,400 (19.6%) from the previous year. This is a rate of 4.3%, up 0.7 percentage points compared to the previous year.

Unemployment and sex

Differences between male and female unemployment are not as apparent as in employment or economic inactivity. Historically, the number of unemployed males has tended to be higher than the number of unemployed females.

Figure 2.2: Unemployment rate, males (percentage of those aged 16 and over), 3 months to July 2018 to the 3 months to July 2023

Description of Figure 2.2: A line chart showing the male unemployment rate for Wales and the UK. The Wales and UK rates have generally increased over the last year, however Wales' has been more volatile.

Source: Welsh Government analysis of Labour Force Survey

There were 33,100 unemployed males in Wales in May to July 2023, an increase of 5,700 compared to the same period a year earlier. This is a rate of 4.1%, down 2.2 percentage points when compared to the previous quarter and up 0.6 percentage points on the previous year. Unemployment rate changes should be considered alongside longer-term trends where possible due to the recent volatility of the series.

The number of unemployed males in the UK rose by 181,100 (27.4%) over the year to 841,200. This is a rate of 4.7%, up from 3.7% a year earlier.

Figure 2.3: Unemployment rate, females (percentage of those aged 16 and over), 3 months to July 2018 to the 3 months to July 2023

Description of Figure 2.3: A line chart showing the female unemployment rate for Wales and the UK. The Wales rate has fluctuated more than the UK rate over the last five years, although Wales and the UK have followed similar trends.

Source: Welsh Government analysis of Labour Force Survey

There were 25,200 unemployed females in Wales in May to July 2023, up 4,100 (19.1%) from the same period a year earlier. This is a rate of 3.5%, up 0.5 percentage points on the previous quarter and up 0.4 percentage points on the previous year.

The number of unemployed females in the UK increased over the year to 623,200. This is a rate of 3.8%, an increase of 0.3 percentage points compared to the previous year.

Claimant count (DWP)

Claimant Count: The number of people claiming unemployment-related benefits. Between 1996 and 2013, the Claimant Count was measured using claimants of Jobseeker's Allowance. In 2013 a new benefit, Universal Credit, which will replace a number of means-tested benefits, including the means-tested element of Jobseeker's Allowance, began to be rolled out. From the introduction of Universal Credit, those claimants who were receiving the benefit for unemployment reasons have been included in the Claimant Count.

The experimental claimant count rate is the number of claimants resident in an area as a percentage of the sum of claimants and workforce jobs in the country or region.

[Experimental statistics](#) are official statistics that are in the testing phase and not yet fully developed, these will potentially have a wider degree of uncertainty.

Figure 2.4: Experimental claimant count rates (percentage of civilian workforce), August 2018 to August 2023

Description of Figure 2.4: A line chart showing the claimant count rate for Wales and the UK over past 5 years. Claimant count rates show relatively little change for the UK and Wales until March 2020 where there was a large increase in the number of people claiming unemployment related benefits. The claimant count rate has generally decreased since for both Wales and the UK.

Source: Jobcentre Plus Administration System, Department for Work and Pensions

Experimental claimant count data showed a large increase at the start of the pandemic and has been gradually declining from the peak in August 2020. In February 2021, Wales' rate fell below the UK rate for the first time since November 1994; but has since tracked very closely.

In August 2023 the claimant count was 60,800 in Wales, down 2,800 (4.3%) over the year and down 700 (1.1%) compared to the previous month. This is a claimant count rate of 3.7%, down 0.2 percentage points over the year and is the same rate as the previous month (based on unrounded figures). The claimant count rate in the UK now (August 2023) stands at 4.0%.

Universal Credit (DWP)

Universal Credit: Universal Credit is a new benefit, which began to be rolled out in 2013, which will replace a number of means-tested benefits, including the means-tested element of Jobseeker's Allowance (JSA). Those Universal Credit claimants who are required to be seeking work are included in the Claimant Count estimates along with all claimants of JSA.

Figure 2.5: People on Universal Credit, Wales, August 2018 to August 2023

Description of Figure 2.5: A line chart showing the number of people on universal credit in Wales. It shows a steady increase until the coronavirus (COVID-19) pandemic, then a steep rise from March 2020 until May 2020. The chart shows a steady increase in numbers over the last year.

Source: Universal Credit, Department for Work and Pensions

After the large initial increase at the start of the pandemic, the number of people on Universal Credit decreased between April 2021 and December 2021. Since then, the number has generally increased to a new high of 301,200 in August 2023, an increase of 1.3% compared to the previous month.

Of the 301,200 people claiming Universal Credit in Wales, 129,100 (42.9%) were categorised as having no work requirements, 56,700 (18.8%) were categorised as searching for work, and 55,800 (18.5%) were categorised as working – no requirements.

Redundancies (ONS)

Redundancies (LFS): The number of people, whether working or not working, who were made redundant or had taken voluntary redundancy in the three months prior to the Labour Force Survey (LFS) interview. The redundancy rate is the ratio of the redundancy level for the given quarter to the number of employees in the previous quarter, multiplied by 1,000.

Potential Redundancies: ONS and The Insolvency Service have published experimental data for the first time in February 2022 on potential redundancies by region collected through HR1 forms. This data does not record the total number of redundancies; they record the number of potential redundancies filed on HR1 forms.

ONS publish estimates on the number of [redundancies](#) and [potential redundancies](#) for UK countries and English regions. The redundancy figures for Wales are based on a small sample size and are therefore volatile, in recent periods estimates have been suppressed on disclosure grounds. Due to the volatility and availability of the data at the Wales level, we have removed these figures from this publication. Data and further information on these topics can be accessed via the ONS published tables.

Online Job Adverts (ONS)

Online Job Adverts: These indices are created based upon job adverts provided by Adzuna. This data includes information on several million job advert entries each month, live across the UK since February 2018, broken down by job category and UK countries and English regions.

Figure 2.6: Online job adverts (Index February 2020 = 100), 29th August 2019 to the 1st September 2023

Description of Figure 2.6: A line chart showing that online job adverts in Wales and the UK had a steep drop following the start of the pandemic, but since rose above pre-pandemic levels. The number of online job adverts generally decreased over the last year.

Source: Weekly Online Job Advert Estimates, ONS

In the week ending 1st September 2023 (the latest week), online job adverts in Wales decreased by 3.7% compared with the previous week and decreased by 5.6% compared to the previous month (week ending 4th August 2023).

In May 2022, ONS published [experimental analysis of labour demand changes](#) for the first time. This publication provides average estimates of online job adverts for local authorities in the UK, produced using Adzuna online job adverts data.

ONS also publish [UK level job vacancy estimates](#) from the Vacancy Survey. Job vacancies in the UK have followed a similar trend to online job adverts over the previous four years.

3. Economic Inactivity

Key Points:

- The latest quarterly figures show that the economic inactivity rate in Wales increased for males when compared to the previous quarter and decreased compared to the previous year. For females, the economic inactivity rate decreased when compared to both the previous quarter and the previous year (Labour Force Survey, ONS)

Labour Force Survey Economic Inactivity (ONS)

Economic Inactivity: Economically inactive people are those without a job who have not actively sought work in the last four weeks, and/or are not available to start work in the next two weeks.

The headline inactivity rate is calculated by dividing the inactivity level for those aged from 16 to 64 divided by the population for that age group.

Inactivity rates in Wales have been persistently higher than the UK for decades but fell steeply to below the UK rate at the end of 2018. The rate in Wales generally rose until mid-2020 and then decreased as it corresponded with opposite movements in the employment rate (figures 1.1 and 1.2). The trend in the economic inactivity rate has seen an overall increase since mid-2021, with May to July 2022 seeing the highest economic inactivity rate in Wales since December to February 2015. There has been a downward trend in the economic inactivity rate in both Wales and the UK over recent months, however the Wales rate remains more volatile than the UK.

Figure 3.1: Economic inactivity rate, persons (percentage of those aged 16-64), 3 months to July 2018 to the 3 months to July 2023

Description of Figure 3.1: A line chart showing over the past four years, inactivity rates have generally increased in both Wales and the UK despite a downward trend in the rate for both Wales and the UK over recent months. The rates in Wales were consistently higher than those in the UK until 2018 when the Wales rate briefly fell below the UK. The rate has remained higher than the UK since December to February 2019.

Source: Welsh Government analysis of Labour Force Survey

There were 443,800 people in Wales who were economically inactive in May to July 2023, down 44,700 (9.1%) from the same period a year earlier. This is a rate of 23.2% of those aged 16-64, down 1.2 percentage points over the quarter and down 2.4 percentage points compared to the same period a year earlier. The number of economically inactive people in the UK decreased by 231,000 (2.6%) over the year to 8.8 million. This is a rate of 21.1% of those aged 16-64, down 0.6 percentage points on the previous year.

Economic Inactivity and sex

Females have higher inactivity rates than males, primarily because they are more likely to have full-time caring responsibilities. Over the last two decades, the inactivity rate for females in Wales has experienced a large fall, from a high of 37.2% in 2002. It increased from late 2018 to mid-2020 and after a period of volatility has, from March 2022, seen an overall increase. Following a period of increasing economic inactivity in Wales for males from late 2018 to late 2020, rates have generally decreased despite the series becoming more volatile.

Figure 3.2: Economic inactivity rate by sex, Wales and UK (percentage of those aged 16-64), 3 months to July 2018 to the 3 months to July 2023

Description of Figure 3.2: A line chart showing the UK economic inactivity rates for both males and females have remained relatively stable over the past 4 years, whereas the rates in Wales have been more volatile.

Source: Welsh Government analysis of Labour Force Survey

There were 173,200 economically inactive males in Wales in May to July 2023, down 26,600 (13.3%) from the same period a year earlier. This is a rate of 18.1% of those aged 16-64, up 1.2 percentage points on the previous quarter and down 2.8 percentage points on the previous year. The number of economically inactive males in the UK decreased by 119,600 (3.2%) over the year to 3.6 million. This is a rate of 17.4%, up 0.5 percentage points compared to the previous quarter and down 0.6 percentage points compared to the previous year.

There were 270,700 economically inactive females in Wales in May to July 2023, down 18,100 (6.3%) from the previous year. This is a rate of 28.2% of those aged 16-64, down 3.6 percentage

points over the quarter, and down 2.0 percentage points from a year earlier. The number of economically inactive females in the UK decreased by 111,500 (2.1%) over the year to 5.2 million. This is a rate of 24.7%, down 0.2 percentage points from the previous quarter and down 0.6 percentage points from a year earlier.

4. Key quality information

4.1 Relevance

This monthly bulletin is a compendium publication that brings together the latest key statistics relating to the Welsh economy and labour market, mainly in the context of the UK economy and labour market. The headline Labour Force Survey (LFS) estimates in the bulletin are published by ONS in their Labour Market Statistical Bulletin which includes headline figures for Wales as a whole.

This bulletin provides a more detailed breakdown of the Wales data than the ONS bulletin and presents those estimates alongside other headline estimates for the economy and labour market for Wales. These statistics are used by the Welsh Government to monitor the headline statistics for the Welsh economy as well as providing comparisons to the UK economy. The bulletin complements the [Welsh Economy in Numbers dashboard](#), which provides a broad picture of the Welsh economy.

The Labour Force Survey (LFS) remains the main source for headline labour market indicators at a Wales level. The larger sample of the Annual Population Survey (APS) allows for estimates at a local authority level and for sub-groups of the population.

Information from the Annual Population survey that was included in previous versions of this bulletin, can be accessed via the quarterly [Labour market statistics \(Annual Population Survey\)](#) publication. This includes data for Welsh economic regions, long-term unemployment rates, youth unemployment and the reasons for economic inactivity for males and females.

This bulletin is used by other public sector organisations, businesses, academia and private individuals as a means of identifying the key trends in the headline economic and labour market statistics for Wales. Our [2012 user consultation](#) provides more information on how our outputs are used.

Welsh Government published a more detailed analysis of [protected characteristics in the labour market in Wales](#) on 16 December 2021. We welcome your feedback on this publication and priorities for future analyses; please see contact details at the end of this release. Data is also currently available on [StatsWales](#) and [Nomis](#).

Labour Force Survey (LFS) estimates published on 14 June 2022 were reweighted for periods from January to March 2020, using updated Pay As You Earn (PAYE) Real Time Information (RTI) data. This uses the same method of applying growth rates from PAYE RTI data as that implemented for the first time in [July 2021](#). The non-response bias adjustment, previously implemented for England, Wales and Scotland data, has now also been applied to Northern Ireland data.

The ONS article, [Impact of reweighting on Labour Force Survey key indicators: 2022](#), provides indicative estimates of this reweighting and gives a more detailed timeline of when they plan to incorporate this into their outputs. The impact of the LFS reweighting is small on all headline labour market indicators (employment, unemployment and economic inactivity) for Wales for both rates and levels. More information can be found in [Chart 4.1](#).

Figure 4.1: Revisions to the employment rate, unemployment rate and economic inactivity rate, Wales, 3 months to June 2019 to the 3 months to December 2021

Description of Figure 4.1: A line chart that shows how the reweighting in June 2022 affected the Welsh employment rate, unemployment rate and economic inactivity rate.

Source: Labour Force Survey, ONS

On [18 July 2022](#), the Office for National Statistics announced an issue with the collection of some occupational data. On [26 September 2022](#), users were informed of the impact of the coding error. A recoding exercise has been undertaken to correct the error and has revised affected Labour Force Survey (LFS) estimates in the July 2023 labour market release. An [article](#) published on 11 July 2023 gives more detail on the new methodology used and its impact.

The Annual Population Survey estimates were updated and published on [Nomis](#) alongside the August 2023 labour market release.

In response to the coronavirus (COVID-19) pandemic, ONS increased the wave 1 LFS issued sample size to mitigate the drop in response rates. In July 2023, it reverted to pre-pandemic wave 1 LFS sample sizes, which may potentially have an impact on response numbers and sampling

variability. The full impact of this change will not be apparent until at least a full quarter of data is available in November 2023.

4.2 Accuracy

Some of the data in this bulletin is based on sample surveys meaning it is subject to sampling variability. The LFS is a sample survey and, as such, estimates obtained from it are subject to sampling variability. If we drew many samples, each would give a different result.

Table 4.1 shows the sampling variability of the estimates, and quarterly and annual changes using 95% confidence intervals. We would expect that in 95% of samples the range would contain the true value. Due to the LFS five wave structure, this means it can be used to assess changes over six quarters or more. The confidence intervals have been calculated using data that are not seasonally adjusted, with the relevant sampling errors produced then applied to the seasonally adjusted data.

If the 'quarterly or annual change' of an estimate is larger than the 'confidence interval around the change', the change is statistically significant. If none of the reported changes over the year or the quarter were statistically significant, then the recorded changes did not exceed the variability expected from a sample survey of this size.

The Office for National Statistics (ONS) indicate that there is an increasing challenge to maintain response rates for the Labour Force Survey and that headline numbers and trends for employment are starting to vary from other labour market data sources. In addition to the [Office for National Statistics blog](#) on this topic, please see the latest [Chief Statistician's update on understanding and managing the impact of these challenges for labour market data in Wales](#).

Table 4.1: 95% confidence intervals for LFS figures: Wales, 3 months to July 2023*Numbers in thousands*

	Estimates			Quarterly changes			Annual changes		
	Lower limit	Estimate	Upper limit	Lower limit	Quarterly change	Upper limit	Lower limit	Annual change	Upper limit
Employment level	1,427	1,484	1,541	-30	42	115	-36	33	102
Employment rate	71.0%	74.0%	76.9%	-1.7%	2.1%	5.9%	-1.7%	1.9%	5.6%
Unemployment level	37	58	79	-44	-15	14	-16	10	35
Unemployment rate	2.4%	3.8%	5.2%	-3.0%	-1.1%	0.9%	-1.1%	0.5%	2.2%
Economically active level	1,486	1,542	1,598	-43	28	98	-25	42	110
Economic activity rate	74.0%	76.8%	79.7%	-2.5%	1.2%	4.9%	-1.1%	2.4%	5.9%
Economically inactive level	373	444	514	-113	-22	69	-130	-45	41

Source: Labour Force Survey, Office for National Statistics

The [Welsh Government revisions policy](#) is available from the Statistics and Research website.

Where the data is not from the Welsh Government, the revisions policy of the individual Government department is followed. The majority of the data in this release is from the ONS and their [revisions policy](#) applies.

From June 2015 the Claimant Count statistics were designated as experimental due to the impact of Universal Credit, which is designed so a broader span of claimants is required to look for work than under Jobseeker's Allowance.

This means that once Universal Credit was fully rolled out, the Claimant Count was higher than it would otherwise be under Jobseeker's Allowance. The impact has increased as roll-out of Universal Credit has progressed and the seasonally-adjusted claimant count series has become more volatile. The full [ONS statement](#) is available via their website.

This bulletin previously included statistics on working age benefits claimants by client group, based on Department for Work and Pensions (DWP) data. DWP no longer produces this series and the full statement is available via the [Nomis website](#).

DWP now publishes a Benefit Combinations dataset on their StatsXplore website which provides both Working Age and Pension Age statistics on the number of individuals claiming a DWP benefit in total and to show the key combinations of benefits claimed. We are in the process of assessing whether this new data source is appropriate for our uses and/or publication.

4.3 Timeliness and punctuality

This bulletin follows the ONS publication schedule of labour market data, available on the [National Statistics Release Calendar](#). Table 4.2 lists the date of last update and next update for each data source.

Table 4.2: Summary of data sources

Data	Source	Last Updated	Next Updated
Claimant count	Jobcentre Plus Administrative System, DWP	12-Sep-2023	17-Oct-2023
Economic inactivity rate	Labour Force Survey, ONS	12-Sep-2023	17-Oct-2023
Employment rate	Labour Force Survey, ONS	12-Sep-2023	17-Oct-2023
Hours Worked	Labour Force Survey, ONS	12-Sep-2023	17-Oct-2023

Description of Table 4.2: A table showing the different data sources used in the Labour Market Overview release, when these data sources were last updated and when they will be next updated.

4.4 Accessibility and clarity

Much of the data behind the charts shown in this bulletin can be found on StatsWales. This bulletin covers key statistics for Wales as a whole, but additional breakdowns for age, gender, disability and ethnicity are also available on StatsWales and the ONS website. Links to StatsWales, Welsh Government statistical headlines (where applicable) and ONS analysis for information presented in this bulletin as well as other economic and labour market data are provided below.

Table 4.3: Links to StatsWales, WG headlines and ONS analysis

Vacancies		
Workforce jobs		

Description of Table 4.3: A table showing the different economic and labour market statistics with links to where they're published online.

4.5 Comparability and coherence

Comparable measures for other UK countries for the data published in this bulletin are published on StatsWales and on the ONS website, which can be accessed using the data links in Table 4.3.

Labour Force Survey (LFS) and Annual Population Survey (APS)

Estimates of employment, unemployment and economic inactivity are available from both the LFS and the Annual Population Survey (APS). Estimates from the LFS are based on a rolling quarter and are updated monthly. The sample sizes are too low in the LFS to produce reliable estimates for geographies below Wales level. Estimates from the APS are based on a rolling twelve months, updated each quarter. The APS uses a bigger sample than the LFS so is used to produce estimates for geographies in Wales. At Wales level, the APS is a slightly more robust measure than the LFS but it is less timely and slower to adapt to changes in the labour market.

Labour market statistics for Wales using APS estimates are published quarterly on the [Welsh Government website](#).

Employment and Workforce Jobs

Employment figures differ between the LFS estimates and Workforce Jobs. Primarily this is because people with more than one job are counted once in the LFS but more than once in Workforce Jobs. The LFS does not cover people living in most types of communal establishments and Workforce Jobs excludes unpaid family workers.

ILO Unemployment and Claimant Count

There are two different measures of unemployment used in official UK statistics, the headline International Labour Organisation (ILO) measure recorded by the LFS and the claimant count measure. Each is subject to advantages and disadvantages.

The headline ILO measure is a count of those who are out of work and want a job, or have actively sought work in the last four weeks and are available to start work in the next two weeks; plus those who are out of work, have found a job and are waiting to start in the next two weeks. It is the broader measure of unemployment. However, it is sourced from a survey so the results are subject to sampling error. Wales data is subject to higher variability than UK level data because of the smaller sample size.

The claimant count is a count of all those claiming unemployment related benefits (currently Jobseekers Allowance plus some claimants of Universal Credit). As such it excludes those who are unemployed who are not eligible to claim, and those who do not wish to claim. However, it is a count of all claimants and is not subject to any sampling variability. It can therefore be disaggregated to very high levels of detail, and in particular, changes measured over the short term are more robust than for the headline unemployment measure.

4.6 Technical notes

Some of the data in this bulletin are presented as index numbers. Index numbers take the data for each time period and divide them by the figure for the reference period, and multiply the result by 100. A figure of above 100 for a given time period then indicates that the figure is higher than that for the reference period, whilst a figure of below 100 indicates that it is lower than that for the reference period. Data on workforce jobs and self-employment jobs are presented as indices referenced to 1999 = 100. Data on exports is referenced to 2013=100 due to methodological differences before 2013. The indices of production, manufacturing and construction and the index of market services are each referenced to 2016 = 100.

Data series shown are seasonally adjusted unless stated otherwise. Seasonal adjustment is the process of removing variations associated with the time of year from a time-series and enables comparisons of labour market statistics to be made since the previous quarter or previous month. Labour market data for Wales is seasonally adjusted but for geographies within Wales only non-seasonally adjusted data is available.

4.7 National Statistics status

The [United Kingdom Statistics Authority](#) has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the [Code of Practice for Statistics](#).

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value, and it is our responsibility to maintain compliance with these standards.

All official statistics should comply with all aspects of the Code of Practice for Statistics. They are awarded National Statistics status following an assessment by the UK Statistics Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate. The designation of these statistics as National Statistics was confirmed in March 2010 following a [full assessment against the Code of Practice](#).

Since the latest review by the Office for Statistics Regulation, we have continued to comply with the Code of Practice for Statistics, and have made the following improvements:

- Focused the release on labour market data to provide users with a clear picture of how the pandemic is affecting the labour market.
- Used additional sources of data (e.g. HMRC PAYE data and the Coronavirus Job Retention Scheme) to illustrate the impact of the coronavirus pandemic in a timely way.
- Improved visuals by de-cluttering and standardising charts and tables.
- Added in information about statistical significance to clearly communicate to users the uncertainty in the data.

- Added in key points to each section so that users don't need to read the whole of each section for the key messages.
- Expanded the coverage of topics to include workforce jobs.

Expanded the coverage of topics to include workforce jobs It is Welsh Government's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Office for Statistics Regulation promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

4.8 Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural wellbeing of Wales. The Act puts in place seven wellbeing goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators ("national indicators") that must be applied for the purpose of measuring progress towards the achievement of the wellbeing goals, and (b) lay a copy of the national indicators before Senedd Cymru. Under section 10(8) of the Well-being of Future Generations Act, where the Welsh Ministers revise the national indicators, they must as soon as reasonably practicable (a) publish the indicators as revised and (b) lay a copy of them before the Senedd. These national indicators were laid before the Senedd in 2021. The indicators laid on 14 December 2021 replace the set laid on 16 March 2016. This release includes data related to the following national indicator:

- (21) percentage of people in employment

Information on the indicators, along with narratives for each of the well-being goals and associated technical information is available in the [Well-being of Wales report](#).

This release includes contextual indicators, namely the basket of indicators presented in the Well-being report in the previous link.

As a national indicator under the Act they must be referred to in the analyses of local well-being produced by public services boards when they are analysing the state of economic, social, environmental and cultural well-being in their areas.

The Act states national milestones must be set that "...the Welsh Ministers consider would assist in measuring whether progress is being made towards the achievement of the well-being goals." In doing so Welsh Ministers must specify how we know that a national milestone has been achieved and the time by which it is to be achieved.

National milestones are not performance targets for any individual organisation, but are collective measures of success for Wales.

In this release indicator (21) percentage of people in employment corresponds to the milestone “Eradicate the gap between the employment rate in Wales and the UK by 2050, with a focus on fair work and raising labour market participation of under-represented groups”. Further information on the [Well-being of Future Generations \(Wales\) Act 2015](#).

The statistics included in this release could also provide supporting narrative to the national indicators and be used by public services boards in relation to their local well-being assessments and local well-being plans.
